All three session transcripts

Week 2 Day 2 - 29 September 2026

Automatic draft - check the recordings for exact quotations

All three recordings were processed locally. Speech recognition may mishear names, accents, room discussion or overlapping voices. This is not a fully human-verified verbatim record. Speaker identities are not assigned. The study guide interprets the content separately.

Total recording time: 04:43:55

Timestamps restart at zero for each recording. Use the session number as well as the time. Short speech segments are grouped into roughly 45-second paragraphs without rewriting recognized words. Individual TXT and SRT files provide finer timestamps.

Jump to a session

Session 1: Qualification and useful outreach - 02:12:08

GMT20260929-054946_Recording_1920x1080.mp4

Session 2: Be AI-native from day one - 00:47:14

GMT20260929-081633_Recording_1920x1080.mp4

Session 3: Discovery calls and practice - 01:44:31

GMT20260929-091749_Recording_1920x1080.mp4

Sections needing extra caution

Session 2 opens with background audio that produces repeated words. Session 3 includes quiet, overlapping workshop conversation, especially around 01:00-01:14; its automatic text is often unclear and must not be treated as reliable quotations. Unclear room chatter is not used as evidence in the study guide.

Session 1: Qualification and useful outreach

Recording duration: 02:12:08. Times below are local to this recording.

00:00:00 - 00:10:00

[00:00:05 - 00:00:52]
How's everyone doing? Good. Good. Okay. I'm good. Glad to hear. Let me have a dash fork. Yes. Okay, so exercise we always go through. So what did you learn yesterday that was news to you or a good refresher for something you already knew but a good reminder that you need to do it? So, in between we identified an interesting high-seeking on the B2B model that we have. So, we didn't have such clarity and ideas around that specific territory. So, I think it's not really a doubt that we're in a couple.

[00:00:53 - 00:01:39]
And it's expanding the mindset towards the models of the ICGs for future potential growth. I think that's the really helpful. Who else still feels like they don't have their right ICP? Everyone knows their best ICPs? It's kind of important, I'm sure. From last week we didn't know how important, we didn't realize how important this segment is to our audience. So through the lectures and after our talks we realized that we need to segment them that we can move out of there. Yeah, this is important for everyone. Typically people have very broad definitions of ICPs.

[00:01:40 - 00:02:24]
We really want you guys to come up with very specific ones, several of them if that's the case. Because that's how we communicate to them, that's how you decide to channel this. Absolutely. Yes, like we learned that we had ICPs, but these are more like a segment. So now we have two ICPs with the figures and the focus. So I think that's pretty small. Okay. Anyone else? ICPs, all good? Okay. So in all of the things you heard yesterday and learned from Briana, Which one do you think will be very hard to implement in the short term?

[00:02:26 - 00:03:11]
Why? Nothing is hard to implement. So we want it done by tonight. And then everyone will learn what's more like propositions for each of the segments that they want to offer. Can you guys please? Yes? Please, please. Okay. What will still work next? We understand that it's not only one customer position for one single, but a few. It's still in Ireland, right? About every, like, at least in between three months you should be taking careers in your ICPs, right? And how you're positioning things and how you're talking about the value. People are winning more if you're switching ICPs, right? And if you are trying to test different ones,

[00:03:11 - 00:03:33]
you need to switch how you talk about the value of it. Right? Yeah. Right. So who's ready has all the content, knows how to talk to their customers, knows their perfect best MVP, that's going to get to the revenue in 12 weeks. I know. Anyone else?

[00:03:47 - 00:04:38]
Yeah, yeah, on this point, so we feel, okay, I feel like I want to speak for the managers, but I feel like at least from the conversations I've had and the things I've heard in some of the sessions when I'm here, I don't think you, in general, again apologies to the ones who are doing good, but I think in general the practice is not being aggressive enough or ambitious enough, it's pretty good, ambitious enough on the goals that you're setting for yourselves. So starting next week we will be looking at your dashboards in more detail and specifically at the dashboard with the real metrics, right? So we've been, yesterday I showed you this,

[00:04:38 - 00:05:25]
situation is getting slightly better. So thank you for trying to make progress. I hope by the end of week two we see all greens. But starting next week we'll have weekly stand-ups on Mondays. It's very important for you to be there and be ready to give us updates on how you're doing. There is an anatomy of what are the things that we want each company to cover in a few minutes. We'll share that with you at the right time. But the other thing we will be doing on top of that is we will be tracking your metrics This is just the first company, they're all in the same file for us.

[00:05:25 - 00:06:14]
So what I would like to see is I would like to see all of you setting up ambitious KPIs that you most likely are not going

to hit because just setting a KPI for the sake of hitting it is you're bullshitting yourselves, right? So these dashboards are also meant as a self-accountability thing. If you don't have anyone doing sales but you, definitely you need to put a number there to remind you at the end of the week, yeah I said I was going to do 10 calls this week or 50 calls this week and I only did 7 out of 10, right? So that's what the numbers in the dashboard also are useful for. So again, since this is the last morning I'm going to be here, reminder that the week we

[00:06:16 - 00:07:02]
are super critical as are the other sessions that we have with content but especially the weekly meetings is where we come together to share what we've done so that we can also learn from each other. Companies will describe some things that worked well for them, the others can learn from that. Some companies will say we tried this and failed, others can chip in, us mentors can also chip in saying okay maybe next time you try something different this way or that way to see if it doesn't fail. That's the weekly meetings. Like I said I won't be here the rest of the week but the mornings this session remains. Just you know we'll do the morning stand-up with you and then those

[00:07:02 - 00:07:49]
weekly meetings, those weekly stand-ups on Mondays will be run by Anna but myself be in most of those costs. Any questions on what I've mentioned until now? One more thing, sorry. We've been getting your survey results and we really appreciate you filling them in. We are a bit puzzled with one thing, which is a lot of the reviews, the qualitative reviews that we're getting are positive, if not all of them, but then the ratings don't reflect scale of 0 to 10 for you to have the feeling our program usually has an NPS of 10 in 80% of the times we've done this. So now I'm not asking you to raise

[00:07:49 - 00:08:33]
the numbers I'm just saying that if to put things in perspective so if you're rating us with a 7 definitely the qualitative description should include improvements for us because otherwise we don't know what to do with it. So if they're anonymous right so they're anonymous so if it's really a seven or an eight or whatever just give us give us improvement feedback with the quality of stuff we're getting now we cannot improve much I think that's it for me from now for now yes today we have session from Rihanna and it will be for the workshop for the discovery calls

[00:08:35 - 00:09:24]
the previous look as well. The photo shooting from the back of Georgia is scheduled for today. Just let me know if there is some information for this photo shooting but I am sure that all of you have it. It will be happening in this room so after the sessions we will be setting up this room for the photo shooting. so once the time comes you can come here and it will be maximum 10 minutes it depends on how many team members are in her company or if you are just one so it will take less than 10 minutes so we will be sharing this also with the edited versions and also just normal ones all of them so yeah don't be late otherwise the scheduling

[00:09:24 - 00:09:59]
it will be messed up so make sure that we won't waste our time. So that's all from my side if you have any questions just let me know before we should be. No? All good? Okay. They're all professionals. So one last thing for me so because I'm leaving I will remain available every day online if needed. I will try to do more office hours if I can even though the next few days I will be in and out of events But if there's critical stuff

00:10:00 - 00:20:00

[00:10:00 - 00:10:45]
you know how to find me. Often people start reaching out to me on WhatsApp. That's fine as a reminder if it's something urgent. Otherwise, please use either Slack or email. And if you try to email me things, especially when it comes to fundraising, every time, please copy Ana because that's the best way to make sure that these get their attention at the right time. lost in my inbox. So I will be around for another few hours before lunchtime but I will make this my official goodbye until next week and again thank you for joining the program and joining the portfolio. We are happy with the

[00:10:45 - 00:11:17]
progress we've seen so far. It's early obviously one week only. We are very happy with your attitude in the sessions. You've been contributing, you've been sharing your thoughts, questioning and challenging some of the assumptions. I think the office hours are also going well. Continue making the best use you can of them because the mentors are here for that. And I just wish you good luck for phase two and we'll see each other on Monday online. Thank you.

[00:11:44 - 00:12:33]
ask questions or connect and just make good connection with the bell tech so it will be happening during the lunch time so make sure that we'll be ready for it as well questions the calls are already scheduled yes the demanding calls are already yes it's already in the calendar does the phase two keep up this call? It begins with a keep up but after it's just a weekly schedule so during this month they will still explain how scheduling is going for the phase two and then and the individual mentors will like your resident mentors will move on the view on a weekly basis

[00:12:33 - 00:13:02]
and then with every other mentor you can also access all these hours to the calendar being obligated. All these talks will be discussed on Friday so we have to lose too much. Yeah, the floor is yours. Good day for you too! Let's go! Okay, we're going to have a little more tech video today, but not that much. Day 3, everybody just full of joy and excitement. Okay, so everyone has their rally props because we're like, one position, three by three,

[00:13:12 - 00:13:22]
I think Mary has a QR code from yesterday. Two minutes. Feedback on yesterday's session. Fill it out. Two minutes, and then we're going to start. If you didn't already.

[00:13:43 - 00:13:46]
Thank you.

[00:14:15 - 00:15:01]
All right, let's go. We're almost done. About ready. Remember, today is split into two separate sessions. This morning we're going to do outreach. We're all going to write some emails, some messages. They can be doing most of us if you are not raising out the businesses. Either way. And then this afternoon we're going to do discovery calls. Go ahead and do discovery calls, and then we're going to practice. Right? we're gonna do this and we need to work out. Yes? Yes. Okay. Okay. Ready, I run the hall, computers down, attention for 90 minutes, a little shorter because part of it you're gonna be working on, right? Okay, we're gonna talk about defining your SQL, what your self-qualified leads should be, or should look like,

[00:15:01 - 00:15:45]
so you have a strict definition of what that is. Everyone, we're gonna talk about outreach, and then we're also gonna talk about what discovery calls should look like. Which will be very fun and exciting. Very fun. Okay, so agenda, SQL definition, up on email, discovery, call script, and then unqualified flow. And the reason I want to talk about the unqualified flow is because there's different things that you do with them based on why they're unqualified. You should have a list of unqualified reasons and we'll talk about that as well. What makes a lead sales qualified? When I say SQL, or when I say sales qualified lead, what does that mean to you? for your definition. They have a problem.

[00:15:48 - 00:16:33]
And something else. And something else. Uh-huh. OK. Good. Anyone else? Does anyone else go by the definition? Yes. We want to identify the problem of the density. OK. Yes. How big of a problem they have. Anyone else? The basic of the data, you identify them, they might buy. OK. Okay. Yes. Different signals they're looking for. Yes. Right. When we're thinking about qualifying leads, right, there are a couple things. We have our MQLs and our SQLs. Who now has a definition for both of these? Only anyone else? Anyone else? Anyone else? A little bit. Thank you.

[00:16:33 - 00:17:18]
Yeah. Okay. So marketing qualified lead is the marketing team is trying to drive leads that are a good right based on objective criteria to say these are marketing qualified leads. Marketing is doing a good job of bringing people in that are a potential fit. Yes or no, right? That's what an MQL is. So oftentimes marketing teams, they're judging their success by how many MQLs they're bringing in, right? If you're not doing that, you should think about doing that, right? Because if your marketing team is bringing a lot of traffic or you're getting a lot of traffic, but none of them are qualified or fit the objective criteria that you have, then you're driving a lot of unnecessary traffic, right? So, for example, the MQLs, right, your team, or your sales team is defining what is a good sales qualified lead. So, saying, okay, we said this was an MQL, how many of these are actually sales qualified

[00:17:18 - 00:18:04]
that we can move forward because they have good intent, right? And oftentimes, you will then take the criteria from your SQL and bring it down to your MQL, to say, like, we're actually driving the wrong kind of traffic because we're not able to convert a lot of our MQLs into SQLs, right? And sometimes it's a sales problem, sometimes it's a traffic that you're bringing in problem, And so this will be contention as you grow between the marketing and sales teams. It's

something that you need to think about and something that you need to define well so there's less tension between the teams. Yes? Right now it's probably not a problem because you're three to ten people and it's not a big deal, right? Because you're like, we're driving some traffic, we're talking to people, it's fine. But as you grow and people are judged on their success of how many SQLs are bringing in, what the SQLs look like, when your sales team gets paid on a commission on the SQLs, the

[00:18:04 - 00:18:49]
definitions of these become very, very important and it becomes very important that you have of them very well defined, right? So make sure that your team is on the same page. So we're thinking about, right, when they're coming in, just visually marketing, bringing them, you're determining the MQL when they come into you, right? When they come into your sales funnel. And your SQL is when you are talking to them, you're interacting with them because you can find out more things that you couldn't find out just from them filling out a form. Yes. So when we're thinking about our MQLs, right, some examples of like determining and thinking about the MQL It can be like they requested a demo or sent it to Outbound, attended a webinar, referred by a customer. It can also be just demographic data. If you're asking them to follow a form, if you're saying give me your name and email.

[00:18:50 - 00:19:35]
And then you can do something on the back end to say you fit your company size is a good fit. You fit our ICP from this set of data that we have. That you can say, OK, this is our MQL. This is what we're saying now. But it can also be actions that they do to show that there's some interest. both can be defined as MQLs, but you should think about for you how you want to define what inbound traffic looks like and what is a good fit and what is good inbound traffic and what is not good inbound traffic, right? Because like what comes in, if like trash comes in, trash continues down your funnel, right? And so thinking about what makes a good MQL and judging your team, your success, your marketing by these is really important and that will lead to your sales call by lead, right? When we're thinking about what that looks like,

[00:19:35 - 00:20:00]
we're talking about this more in the Discover call section in the afternoon with examples. But we're thinking about like band is a very, very common term that salespeople use to qualify people. I know one team has heard of it. Anyone else? Mal has done it. Anyone else use band? Heard of band? Yes? Do you use it? Yeah. OK. So we're thinking about, right, we want to make sure like they have the budget. Like do they have the ability

00:20:00 - 00:30:00

[00:20:00 - 00:20:45]
to spend money do they have the budget from somewhere do they need to find the budget from somewhere right and when we're thinking about our SQO and thinking about the budget it's not just have they spent money before on things it is right now at this moment in this month in this quarter do they have money that they want to spend on fixing this problem yes or no and how much do they have right and so you're identifying and thinking about how can I ask questions because if you just say what's your budget But you're going to ask questions around that to get the answer to find out if they have the budget. Sometimes people will be very direct with you and be like, I have no budget for this, so I'm just exploring. And sometimes people will tell you, like, oh, we're thinking about sending you 10K a quarter. Right? And as someone's authority, like, do you know who the decision maker is? We talked about this a little bit yesterday.

[00:20:45 - 00:21:30]
Right? When it's, if you ask directly if they're the decision maker, 95% of the time, they'll tell you yes. It's me. I sign. I make all the decisions. Like, it goes through me and I decide. the time, that is not true. There's someone else involved in it. And so you need to figure out, is this person actually the decision maker? Or who else is involved that we need to talk about? What other stakeholders do we need to identify and talk to to do this? Why would they say why I'm the decision maker? It's not true. Yeah, why? I mean, a lot of people don't want to say, I have someone else making the decisions. I'm not fine enough to make that decision. So it's like an ego thing. OK, so it's psychological. Yeah, just an ego thing. People are like, no, this is me. I make decisions. You don't need to talk to NRLS. You just talk to me.

[00:21:31 - 00:22:19]
But most of the time, you do actually have to talk to other people, and they do not make the decision by themselves. Very, very common, if you ask directly. And we'll talk about other questions you can ask to determine what that is in a

nice way. And then need. Do they actually have a problem you can solve that isn't a pressing problem? If it's not a good problem, if it's not a problem they're motivated to solve, if it's very low priority and something that they don't want to focus on, right? Then you're probably not going to close them right now. Like how big is the pain point? How big of a problem is it? We talked about ICPs yesterday and we talked about the problems or proxies or things that you can assign to ICPs. Like you understanding the need of that segment of the things they're trying to solve and how big of a problem that is is extremely important, right?

[00:22:19 - 00:23:04]
Is it a problem that their sales team is overburdened with 70% of them aren't a good fit and so they're wasting 70% of their time on sales demos that don't convert. Right? And then they're like, well, we have to hit a revenue target that we can't hit because we're spending all this time on values. Right? What is it for you? What is the problem that you're solving for your customers, for your specific ICPs? And is it a big problem? Is it a small problem? Is it a problem I want to solve right now? Or is it a problem I want to solve sometime in the next year? Right? Because that's going to determine if they're a sales qualified lead now or not. Right? and they need this and they're thinking about it. Is it something they're trying to solve this quarter? Something they're exploring for like over the next year? Is it something they want to solve tomorrow? Right?

[00:23:04 - 00:23:55]
Your sales cycle is much shorter. It's a much bigger date. It's a much bigger problem. They're like, I need to solve this now. Right? This is something that I need to solve at this moment. Right? And so when you're thinking about these things and you're thinking about your SQL and thinking about how to categorize people, right? Someone who says, oh, we haven't really figured out a budget yet. And yeah, we do want to solve this. We want to figure it out. looking at some other options right like when you're thinking about qualifying as an SQL that SQL is not going to close anytime soon right and so like you are not going to spend as much on chasing them now because they're not anywhere near ready they don't have any of this criteria right they don't need the criteria that you set for yourself to say this is a good sales qualified lead this is who we're going to go after and move forward in our pipeline right and we'll talk about questions more in the afternoon but for now okay let's think about these right these are just some examples of when we're

[00:23:55 - 00:24:43]
these for things that people can say that will give you like a proxy or an idea of what you can figure out for a bank right and so this first one like when I do have the ability to spend and we're seeing how much they spent on recruiters right we use a recruiter for our last two hires it was 18k each we can't keep doing that so you know they've spent about 40k higher to people right that gives you an approximate budget of something they spent before and they want to be under that, right? Without even asking what their budget is going forward, you have an idea of the amount of expense, right? When you are trying to figure out for your specific ICP, when I said yesterday for certain people, right, it's like under two pay a month, a lot of like directors or rippies can just sign on and buy something, right?

[00:24:43 - 00:25:29]
They don't need approval for anything else. For your market, for your ICP, like what is that threshold of like they can approve things versus they have to go and get permission, right? Because it's over a certain amount, right? If you don't know that, that's a question that you usually ask in your interview that you can ask some current customers to get an idea, say it casually when you meet them for coffee to find out. But that is something good to know. Like how much discretionary spending does your ICP have before they have to bring it to get approvals because the approvals take much longer, right? We're thinking about authority right we're thinking about like how much you can improve but over that when other people need to sign off right thinking about again what that would look like and what or not that is need right is there an urgent business

[00:25:29 - 00:26:13]
problem when we're thinking about it's not just what problem do they have right now what goal are they trying to fix right within their company it's also like what will they be able to do if they fix this problem right sometimes it's if we what else would you be able to do internally? And is that something where they're thinking, this would open up so much more for us, I can have a whole other salesperson that can go off to this other market. Is it opening up opportunity, or is it just fixing a problem that they have that they're just trying to navigate at the time? Both can be true, and it's you figuring out and understanding what that is and what that would be. And then timing, there's always other things going on inside the company, whether it's raising a funding round,

[00:26:15 - 00:27:03]
whether it is wanting to bring on new BQ engineering, new BQ sales, and so understanding what goals they have or what they're trying to accomplish by a certain timeframe is really important, right? For you to understand their need and timing or if they're trying to accomplish something by a certain time, right? If they say, by the end of, but we're doing a series B raise at the end of Q4, and by that time we need to increase our revenue by 20%, or we need to make sure that we have all of our metrics and team in place because we're going out and talking to people and if we don't have this story, it's not going to fit. Right? It's not going to work. We don't have to fix our marketing and sales processes. And if you say, okay, well, it takes like 30 days for our process to get up. Maybe it takes 60 days for you to get things set up

[00:27:03 - 00:27:49]
for marketing, right? You know, it takes 60 days to get set up. We only have three months. We need to start this week if you actually want to see And so for some of the timing, it's you understanding how you work and when your customers see results to align with when they want to see results to work on that timing you want to see. Does that make sense? Yes. For me, out of those four, authority seems a little awkward to ask, for example. I don't know. I think it's a good start. Yeah, not senior in that. Yeah, this happens to be able to like other questions, but you would ask like, how do things usually get approved internally? What's the process like? Let's say you want to move forward tomorrow. Like, would we just sign when we could start the day after? Or does it go through,

[00:27:49 - 00:28:38]
like usually people have some internal things, they need sign offs, all those things, right? And you ask like, oh, usually like this happens, it's the same with you. How many other people need to look at it? But you ask it in a way that is a very like casual, soft way, not a, Do you sign this or does someone else sign this? Yeah. Okay. So thanks. Okay, so not every lead deserves your time also, right? I know it's very easy and you want to talk to everyone that comes in because you're like, everyone could be a customer. Not everyone is a customer, right? When we're thinking about defining your SQL, just determining your SQL, right? You're determining those because you are saying, these people are a good fit. These are our customers. We can solve their problem. They have the needs. They are our ICP, they are the customer that we are working with, that we are working for

[00:28:38 - 00:29:23]
us right now. Not to say if you want to explore another market or explore another ICP, like you can't do that. But like generally, right, 80% of your time should be spent like running as fast as you can towards the ICPs that you think are a good fit, right? And to do that, right, it's easy for salespeople or founders to get distracted by people that come in that are like, I have a budget, I want this thing, it's a little bit in your mind or wheelhouse, you can kind of do it. You could have an engineer go and build it. But then it takes resources from your team, right? It takes resources from the ops team, from the engineer team, from everyone to support this customer that kind of does this thing that you can kind of do and you could probably support them, right? But you want to spend your time on the people that you're like, we're building this product for these people that have this need, that have this problem, and we're going to focus on them, right?

[00:29:24 - 00:30:00]
Because you're building for the many who want to scale and grow. You're not just building for custom people that want one-off solutions. There are companies that do that, right? It's up to you if you want to do that or not, but generally you want to focus on your ICPs to promise that you're solving and help the group of customers that are moving in that way. Okay. To finding a good customer, right? And when you're thinking about your MQ and your SQL, I want you to think about these questions, right? Think about the customers that you already have and what makes them a good fit, and think about the customers that haven't been successful with you, that haven't done well, and why and what criteria they

00:30:00 - 00:40:00

[00:30:00 - 00:30:49]
have so you can determine, right? Because sometimes, right, you'll go on your SQL when you're talking to your team, you're talking to anyone, you're talking to a customer, and you say, last time we signed a company and we thought if they had 10 or more marketers that they'd be a good fit, but it turns out if they have 10 or more marketers, they also need this custom-built, they all need their custom-built fast boards, they all use salesforce system with CRM, we can't integrate, we can only, like, push things into the CRM, So actually if there are 10 or more marketers in the Salesforce, they're not our customer group. We can't support them right now. You can save them and keep them, right? And say, maybe once we build this out, we're going to work in Q2 of next year and we're going to build an integration with Salesforce. But like right now, like we don't have that and we're focusing on people that are less than 10 marketers or more than 10 marketers that don't use Salesforce, they use some other CRM.

[00:30:49 - 00:31:35]
right and so it's not just here's what makes you a good customer and a good fit but also what things what things are so far what things are good about them what things like would potentially make them be a customer that stays with you versus someone who has some characteristics that that don't actually make sense yes for you as a customer okay so i want you thinking about what makes a good customer for you I think about some multiple views already in office hours who are your best customers and who are your worst customers and why and I want you to start qualifying that right and saying like okay is this criteria that they have that makes you a good customer if they use this software if they do this thing they have these people if this is their process they're not a good fit

[00:31:35 - 00:32:22]
for us right now right and this is why and that's going to help you define your FQL and help you define your ICP because you can be very very specific not only with like yourself when you're talking to them, but also with any salespeople you hire, right? If you can give them very clear targets, very clear criteria, and the customers that they're going after, that they reach out for outbound, that when people come inbound, what criteria they should look for, any like landmines that they need to find, that they need to identify that makes people a bad customer, the better. Yes? Okay. So now we're going to go into outreach a little bit. Maybe. Okay, so we want to turn our SQ on to messaging and thinking about what our ICP was and our value proposition and into what good messaging could look like.

[00:32:22 - 00:33:07]
So I'm going to talk about some bad messaging and I'm going to talk about some good messaging. As examples, in general with Outbound, there's a few things I want to say about Outbound before we get into examples. There is no one, some of you have asked what's the best channel for Outbound messaging, what's the best message that we should send. There is no one channel, there is no one message. It changes all the time. Traditionally, you can send more emails to people that sent a slightly better email, and I'll show an example of what usual app on used to be. You could send that because people couldn't send at scale as much, like mail merchants and emails. But now AI writes very similar message for everyone. It's LLMs can only take data from the training data

[00:33:08 - 00:33:55]
that they've been given, right? And most of the training data is like structured in a certain way for outreach emails. So those are the messages they get if you use AI, right? And so now people have to do a more holistic approach, right? When you're talking to people, it's not just one channel, it's not just one direct message, it's a warmer approach because right now that's what AI cannot do, right? In 2026, your outreach when you're reaching out to people has to be multi-channel, has to be a warm outreach, has to provide value and has to be more direct, right? It used to be much easier, right? It's not anymore. So when I talk through outbound, and I talk through examples, again, it depends on your ICP. It depends on how your customers like to interact. It depends on where your customers spend the line. And so we're going to go through some bad examples of some messaging that people have sent to, it doesn't matter the ICP,

[00:33:56 - 00:34:42]
because the messaging is horrible. And then some good examples of how people have leaned into their ICP, the things that their customers care about, and identified what the value prop would be to communicate in a better way. That's what I want to focus on. So I want them to be ideas for you to take away. I don't think you're gonna copy any of these, right? I think you can take ideas from some of them and say, okay, that would be interesting. How can I use that? How can I talk to our customers in their language in a way that makes sense for something that they care about

in a way similar to some of these? That's what I expect. That's what I expect you to do in this. I'm gonna say, yes? Okay. What better outreach looks like, right? When we're thinking about outreach, we're thinking about what to have, right? So, we're going to talk about some of these, right? It used to be five to eight sentences.

[00:34:42 - 00:35:29]
It still can be about five to eight sentences, depending on like if you're email or LinkedIn sending a message. We want simple language, we want it to be relevant, pain is obvious, proof is believable, the CT is light, the message starts, message fielding, it was written for them, and it starts with a warm-up message. The warm-up message is probably one of the most important things that you can do right now. is either providing value or providing a connection or a touch point that is not based on your company at all. Right? Not even a little bit about your company. Not talking about you, not talking about your company, but forming a connection with the person first so that you earn the right to ask them to look at your company. Right? To give you feedback, to give you advice, to look at what you're doing. That is generally what you have to do now, which is longer, but you will send out from all of the other AMS that are like,

[00:35:29 - 00:36:14]
Hi, I'm founder. I'm doing this for this, doing this for this. Do you want to book a meeting with me to care about my thing? Usually not, right? Can I just use AI? Again, when you have AI, you can have AI like brainstorm with you, right? And think with you about some things. But AI, again, only can create content based on the training data that's been put in, right? That's why some models are really good at chess because they put in a bunch of chess training data and some models are not good at chess because they didn't use the chess training data, right? So can they use messaging? Can they help raise some of you to think of the content you will have? Yes. Can they write the warm personalized outreach that is needed now at this moment? No, because people are doing it now. That's not in the data set. Maybe in like, I don't know, a couple of the next models you will do.

[00:36:14 - 00:36:59]
But right now, no. Right now, it's you understanding value prop. You can say like, here's our value prop, here's what we're doing. Can you make some ideas of what to say? You will probably need to rewrite it so you can sound more human and more like you. Yeah, why does it? Does that exist? Why does Artisan exist? Why does Artisan exist? Is it SDR? Yeah, but they do outreach. I mean there's like 10,000 companies that do outreach. Yeah, like I guess they are... Right, there's like 10,000 companies that do outreach. They're all of them and everyone boxed between them and they tried it at once. They're like, I didn't like this one because I didn't say this. I didn't like this one because I didn't do this. Like there aren't a lot of people that like stay and are like, this is the best outreach one that we have, right? There's, right? Maybe it works for some cases and for some others.

[00:37:00 - 00:37:47]
Yeah? I would say the same thing. We are not an outreach. We are for . In general, I think it's the same thing. I mean, it works for many. It doesn't work for some. The same is . That's what my question is. Yeah, but I mean, right, which is why we talked so much yesterday about ICPs and about the value crops and how you're talking to your customers, right? And lower transactional products, right? You could definitely use semi-animal of them, right? Because if you're like spending $50 a month, if you buy $200 a month, right, they're usually not really an artisan salesperson. They buy on their own. And AI, I see it's probably more helpful for that, right? Because you're not going to put a person on it anyway. For an enterprise sale, for a large, corporate sale, for anyone with a logo, you are not going to give an artisan to go talk to them for that deal.

[00:37:47 - 00:38:32]
As we've used to that, I have to go with them, right? I have to go with my sales rep to do it. Because I also, unless they've done a bunch of enterprise sales, I also don't want them alone, right? Talking to Google by themselves. I want to go to make sure that we're, like, aligning the stakeholders, that we're talking about the value prop, that we're aligning things, right? And so if it's very transactional, right, you can use some things. You can use AI to, like, help support you. But to do all of it for you, right now, no. Maybe more later, right? But right now, no. Yeah. You want to be clear, specific, and easy to respond to, right, in your messaging. You don't want to ramble a lot. You don't want to talk about a lot of things. I'll have an example here in a second. Even though we talk about not being long or rambly or going and talking about things when we do examples later,

[00:38:33 - 00:39:18]
inevitably, one of you from the batch is going to come up with a five-paragraph email. Even after we've said all this, even after we've said that someone always does it in every batch, don't put a lot of content, right? Don't put a lot of content. This is not to convince people that you're so wild and exciting and have this cool technical thing. This is for

you to start forming a connection, being very specific and standing out. And it will make you stand out from all the other people that are using CLAWS, that are using ChattapT to create these messy emails and sending 5,000 emails at once. If you want to do that, I'm not going to stop you from doing it, but I am going to tell you that you're not going to be very successful doing it. And I'm not going to give you feedback on this mass 5,000 person email that you send because that's not how you do outreach. That's not how you do outreach that is going to scale and be successful.

[00:39:19 - 00:39:59]
That's not going to build the brand that you want. It's not going to build the business that you want. I wouldn't do it. The old way to create sales outreach. And so this is what a lot of fog or tactics you will do. Because this is what a lot of content used to be that people used to write. Everyone would write like this. Here's this interesting information. Here's some research that I did on you. Here's like some pain points or problems you probably have. Here's why I solved those problems. Here's another proof point. And here's our like callback. Right? That's how everyone was writing on. Everyone that was the couple were writing on this. Right? But now we have to be more creative. We have to give people more value. We have to make things shorter because people are very short

00:40:00 - 00:50:00

[00:40:00 - 00:40:47]
attention stands and people are getting way way way more emails right every day people are getting a bunch of emails right from people trying to sell them something trying to find them right any especially any of the like ai innovation teams right any of the tech companies around yc's demo day two weeks go for demo day they're like i have a thousand emails from people trying to sell us because i want to have it for demo day right worst time to reach out to any ai teams in the bay area right But what I want you thinking about, right, is like this is the old way, right? And we're going to be more innovative. We're going to think of new interesting things. We're going to think of our ICPs, the problems they have, how they like to connect, how they talk to other people, how you talk to them at conferences, right, to provide value in a way that is more meaningful. That is how humans connect anyway, right, with meaningful values. Not just like here's this thing, don't you want to connect with me?

[00:40:47 - 00:41:33]
Isn't this so interesting, right? Okay, so 2026 called outreach, right? We want relevance more than volume. Right? Five minutes of research per prospect increases your reply rate by 3 to 5x, which is a lot. Right? If you're spending more time. And now it's okay, right? It's okay to do some things that don't scale perfectly now because you are trying to find your best ICPs, you're trying to find your best market, you're trying to find your best customers, and so spending more time to get the right people, to bring in people that you really want to be customers is valuable. Right? This is not the spraying, spraying, throwing at the beginning against the wall hoping that people talk to us. We want to spend a little bit more time really finding our ICPs in the value blueprint. We want to anchor to a real signal, to something that's happening, to something you know your

[00:41:33 - 00:42:21]
ICPs. You know the customers that you're targeting. You know things are happening with them. If you don't know things that are happening with them, you need to interview them and find out. You need to do some more research. You need to understand where they are, what they're doing, what's happening, what they care about. that they're trying to solve at different times of the year. Maybe their fiscal year is different. If you are trying to sell Accenture or any of the other consulting firms, their calendar year's in July. So in June is when you want to reach out to them, if you want to partner with them. Does your customer have a different fiscal year than other people do? What are some little things that you can identify that you can know about your customer to make sure you reach out to them and interact with them on part-time? LinkedIn for warming, right? We're talking to people. We'll talk about like the multi-channel

[00:42:21 - 00:43:07]
approach more because it can't be just email. It can't be just LinkedIn. It can't be just phone calls, right? Now you have to do multi-channel communication because they have to see you in multiple places and feel like you're in the space, you're in the industry, you know a lot more you are, a much bigger company than you are, right? You don't want to come across as just like, we're a small startup, two bits and team doing these things. No, You're going to be like, look at all the things we know. We built this really cool thing. We have a great team. Everyone's working with us. You should be working with us too. We're everywhere. Right? You're going to look bigger than you are. Yes? And you look bigger than you are when you are in more places. When you're not just sending LinkedIn messages. We want to keep our asks small, right? I get a ton of messages that people are like, can you look at my desk? Can you just try my

product? Or just love your feedback.

[00:43:07 - 00:43:59]
Or just love your feedback. Just take like 30 seconds. It's not 30 seconds for me to go up and look at your product and give you feedback. That's a big ask. Why would I look at this product and give you feedback? If it's someone who's introduced to me, someone who's like, oh, I think this company would be really interesting for you. I think this company would be helpful. I would look at it. But do you provide me values first before you ask something of me? When you meet someone, do you go up to them and say, oh, it's so nice to meet you. Do you have 10 minutes? Could you come up with this thing? Could you come lift the table for me? like why would I do that right like you are earning the right you are building a connection right these are not just like someone to pay you money these are people that you're building a community around you need to earn the right to ask for something so what value can you provide to them first to do that um follow-ups um a lot of replies come after touch geomotion yeah

[00:44:02 - 00:44:48]
for demos, waiting for interviews and stuff. Like a gift card? Yeah, like gift cards, like ordering. I think companies do that when they're bigger, right? Like Rippling is infamous to this. Is that a fifth cup of undergrating Rippling? I think they were, what did they do at first? They did like a pair of Nike's for a bit and then they did an iPad and then what does that do they have? Well, the ads that I get for them now, they're bigger items. They're like, come, and they started with like a, what's the water bottle that's the nicer ones. Anyway, they're on computers and they're like, do a demo with us and we'll give you this thing

[00:44:48 - 00:45:33]
because they're trying to go out market tricking on the Bay Area. I think they're not doing that at all with the markets. But they definitely pay for demos, right? They pay a lot for demos. But that for them, right, even if it's a couple hundred dollars, that means you're probably paying way more to fire other people, right? And so that is definitely something you can do. But like keeping it very targeted, like the reason they do expensive things in the Bay Area is because there's a lot of large companies that are spending a lot of money and so it's worth it for them, right? Probably different in Chicago. Chicago's a different market, right? Spends less money. But when you're thinking about that, if you know exactly who you're going for, exactly who you want to target and you want to offer them like a gift card or something cool or something that you think is interesting because you're like, You, if you are a perfect customer, will pay more to do that. What's your cost to acquire right now?

[00:45:35 - 00:46:20]
Approximately. $5. $5. $1? Yeah, that's very low. That's great. Usually people are spending a lot more to acquire, like an enterprise or a larger logo. Right? If you're spending $50, and you're spending $100, and you're spending $200, and you're like, well, I'm going to send a bunch to acquire them anyway. I'm going to send them an item. I'm going to give them a gift, and give them something to do a demo with me. If you're going to pay that cost to do it, you can absolutely do that. So I think that's fine. Some people will do things. I always tell founders to do this, but not a lot of them do it. Sometimes they do. You can send something to the office of someone that you want to meet. Someone was doing cakes. And I was talking about someone was sending cakes. But if you do like bagels or like something like

[00:46:20 - 00:47:07]
breakfast in the morning with like a little note, like a little chat if you enjoy this from the team, like from the Poogee team. right and then now you've given me something I'm going to say something to you because you just did this nice thing for me it's extremely rude if I like do not respond to this thing that you gave me right this thing that you did for me right some people just need to do a pen written notes right and send them to offices right I've gotten a bunch of those actually and I did respond to them so it's like oh that is actually funny I never get mad I'm like this is like actually quite a lovely thing like thanks thanks staples right for sending me this like okay I will talk to you business program, right? That was a nice thing they did. So how can you like stand out and be different? Because it's not just a email, it's not just a LinkedIn message, but if you're in the market or in this space,

[00:47:07 - 00:47:53]
what can you do that maybe doesn't scale and doesn't have to cost a ton of money, right? But something that makes you stand out that gives people some value that they then feel like they have to give you something back. Whether it's listening to a demo, meeting you for a coffee, talking to you, doing something like what can you do, right? If you visit the Bay Area, if you visit New York, right? Remember, you're in New York. I'm like go around all of them, literally show up to all of them and arrive. I'm here standing outside to know the person you want to meet, right? Like wait for them, like people definitely do that. Salespeople look up, this is the proof here. You don't have to definitely do this, but some

enterprise salespeople have their targets, know if they want to go after, and follow them on social media to know if they're doing activity. You're at the ballet, I'm at the ballet. Now I'll find you because I know that you're going to be here and I'm at the ballet.

[00:47:53 - 00:48:41]
I'm like, now we're gonna run into each other, right? And now we're gonna have this interaction, now you're gonna talk to me, right? You don't have to go that far. Enterprise reps will go that far, right? Because the value that they get from it, the connection and the relationship that they get from doing things like that are valuable enough that they will do that, right? So I want you to think about what you can do at a lower scale. You don't have to show up at the ballet. You don't have to show up at their office. Can you send them something? Can you do something else to be like interesting that they will like think of you, be reminded of you, see you in another way that's just me. That was a long answer to your question, but yes, you can send things. I just want to touch on this. For example, sometimes I send the vascular video on a video for three to five minutes just for them with their name. And I've seen really this is possible for a lot of people.

[00:48:41 - 00:49:27]
Because I think the point where you say you give them time, if they really feel you give that time you are so unique and basically like nobody's giving them time and I'm just showing that appreciation for them they really love that I just want that that one like sometimes like I don't like for me I don't lose often for you like this is worth it yeah for you yeah no absolutely yeah I just send them a video like this online when I'm working I felt like this is important for me to do. I felt it's energy because I'm trying to do it. And I love the energy, blah, blah, blah. I would touch that company. I feel so obviously not made up. And I sent them and I've seen like a, like no replies and I'm like, okay, let's have a chat.

[00:49:28 - 00:50:00]
Yeah. Yeah. Yeah. So people were using like Loom or like other video things to reply to emails also. Some responses like, hey, like, great to be able to do this meeting. Really excited to chat with you. See you on Tuesday. just a like short night things. You're like, here's this video of me like that increases their show up rates, right? Your people like don't show up because now we have this connection. You sent me this video. Now I feel obligated. I'm not going to miss that meeting because like now I know you as a person. Now I've seen you as a person. You're not just an email, right? You're not just a calendar invite, but I can skip. So what

00:50:00 - 01:00:00

[00:50:00 - 00:50:46]
are some things that you think can think about doing that are like that that are more interesting innovative that again make you stand out from all of the other companies that are just sending emails on scale that are saying the same thing i mean to add to us like we sent 300 000 emails out like cold emails and we got like one meeting from it it was ridiculous and then at some point i said okay now they're not allowed to use anymore. And we need to write an email manually and that makes all the difference. Because when we feel the pain of writing it, we have to think about what is called a riot because you can always send emails a day after a break is fried. So that solves all the problems doing it manually. For us, like feeling the pain of writing it. And did it change your messaging when you wrote it versus when you had a clot written?

[00:50:47 - 00:51:34]
I mean, it gave us much more insight because when you have limited time doing it, it's and so painful, and you really think about what you write, and your research, so yeah, it gives us much. Yeah, yeah, because it's easier to do the other way, right? But like, easier doesn't mean better results, right? I'd rather, if you send 10 emails a day, and you get two people to respond, I would be so much happier than if you sent 10,000 emails a day, and got the same two to respond, right? Because the two that you wrote the customer for are probably a better fit, right? How much would you care about the personalization of this email? For example, what you really say, the one thing that we talked about is email funding, and the whole time goes on finding those emails and then just .

[00:51:34 - 00:52:19]
Yeah, I think it depends on the market segment, right, which is why the ICPs are so important, right? Because depending on the customers that you have, basically the more complex your sale is, the more expensive item that you're selling, the more people will pay for it, the customer has, the more time you should spend. Generally as a rule of thumb, right? If they're a logo, if they're an enterprise, if there's someone you want that you'd be excited to show

their logo and you need to spend more time on it. If you're thinking about, like thinking about your settings with people, if someone's gonna pay you $20 a month, right, I would automate some more things for them. Because $20 a month is like very little when you're not sending it to time, unless they're your very, very first customers, then you also probably have to spend some more time

[00:52:19 - 00:53:04]
customizing it even if they're only $20 a month, even if they're free because you need to get people on board, right? But as you grow and as you scale, you think about your SEPs and segmenting people. Segmenting them to say, like, these are our lower value people that we're going to convert at this rate and we're going to automate some more things because it makes more sense for us to do because they're a lower value to the company. These are our higher value customers. We're going to personalize and do more for them because, like, they're going to spend more money, right? They're going to do more with us, which is just unfortunately how it happens, right? So instead of $20 a month versus $2,000 a month, you should prioritize the $2,000 with people to have a more customized experience, right? Thank you. Okay. We're thinking about some benchmarks. There's lots of benchmarks. For 2026, what we're thinking about, that looks like average response rate for a cold

[00:53:04 - 00:53:50]
email, 3 to 6%, top performers, 10 to 15%. Average open rate, 24 to 28%. If you give something above 45%, that is great. you should not share it online anywhere because then everyone will start copying and doing it, which is what happens, right? But within your 45%. 45%. But if you're like, write what topics, sometimes you can write a cadence, you write an email, and you're like, so many people have responded to this message. It's amazing. I'm literally not telling you. Right? Like, in comparison to how many do you send out? I mean, no, but sometimes it's a lot. I send the documents from the top offer, right? So, . Yes, but so when you're thinking about alcohol, right? I want you guys to think about Outbound is every week we should be looking at what emails people are opening for subject line, what people are responding to for subject line, right?

[00:53:50 - 00:54:35]
And so you're going to be iterating them weekly, right? You should be changing your messaging weekly based on how people respond or if they don't respond or what that looks like, right? And so when we're doing that, when we're doing this right with SDRs and BDRs, right, that's their job, they're in outreach, right? That's all they're doing is like a nickel outreach. And so sometimes for the week, right, so maybe they've sent like 50 or 100 emails. And they're like, we get a 45% response rate to something. Like there was this one salesperson, I never personally did this, but he did get a lot of responses sending these horrible cookie monster memes. I hated them. I was like, I don't know if anyone responds to you, but it was like his personality and his vibe and he was like funny and quirky and people would respond to him to this thing. No one else could send that message. I could not send that message to get a 45% response rate.

[00:54:35 - 00:55:24]
People would definitely want. The way he sent it and did it, it worked for him, right? There was 38% on 350 male CEOs, right? Mostly positive, and there was a Ukrainian girl who just inserted the gift of her saying, why are you not talking to me? Genius. There's a lot of crazy things you can do right to get responsive to you things. One partner at benefits, right, I worked with him with benefits was first starting out and the email said they did. We were sent from Parker's email and they were two smaller businesses but it was from Parker. And it was like hey, Parker CEO here doing the same working with, like this is like the reason everyone thought it was him and everyone responded.

[00:55:24 - 00:56:12]
It was like, we used that for like two years. Like the whole thing used that for two years because it was like from the CEO but not from the CEO. It was absolutely not him doing it. It was the SDRPDR team. But everyone wanted to respond. The message was very customized to very small businesses that didn't get a lot of outreach, that didn't get a lot of messages, that genuinely thought the CEO of the company was reaching out to them to help them with their insurance. Right? And so understanding your market and understanding how people will respond is so important because that doesn't work for every market. That worked for that market very well because they didn't get a lot of outreach. Not a lot of people were reaching out to them. Right? And they did have a big insurance problem. Right? They needed to get insurance for their people, and for under 50 people, it's like really complicated in the U.S. to do, right, if you have a small business. And so that was like a very, very sharp, very acute pain point, and the messaging was like very, very targeted and fit them very well.

[00:56:12 - 00:56:58]
So what things like for you, right, again, back to you, because all these things can work for other people, for their ICPs. For your ICPs, how do your customers like to communicate? What are the things they care about? What is their acute need, and how can you pretend to that in a way that makes you stand out and makes you different? Yes? ideas ideas ideas and ideas okay conversion to meeting right for outreach and this is cold email right this is not your email so when you're thinking about your inbound your conversion this is just like full outreach um and thinking about what that looks like right and this is just for right now like in terms of like times best days follow-up lists like for this year so far right i pulled from gartner from other um outreach companies and like the data that they have for this year so far so again it will change changes based on the week changes based on the industry

[00:56:59 - 00:57:46]
for something to compare to some benchmark app. When I'm thinking about LinkedIn, email response 10 to 25%, top performers 30 to 40. Connection acceptance 30 to 45, again, depends on your market and your industry and your space, right? If you're in an interesting industry where not a lot of people connect or are doing things, if you're in tech, B2B SaaS space, maybe it's a lot because everyone's connecting and everyone's like some sort of tool or some sort of product right um average judges to convert is five um versus full email to five x higher reply rate um the best performing vertical recruiting and staffing because people are hiring more people are trying to be our watching units and don't want to be left behind so people are hiring a lot which is good and that's interesting um when we're thinking about

[00:57:46 - 00:58:34]
these things remember when i talked about trigger-based outreach it's like something happens for the company whether it's hiring bp of sales something's happening in the industry there's a new regulation there's like something that's happening you'll get a higher response because there is something that is happening that is pushing them to make some decisions make some change right so that's that's what to think about um know with connection requests lets your reply rate a little bit higher um engaging content before a direct message pushes your acceptance higher so like there's some like interesting thing or connection you saw them at a conference you like what they did you are giving them some value like giving them something people like being given things right yeah if you give people something then you earn the right tasks i just thought it's very curious why why is the sas vertical like so low requirement why are you such a

[00:58:34 - 00:59:18]
right like you can sell people sell sas so many people are selling sas yeah there's i mean yeah but like now there's even more people right it's way easier to build the sas business than ever which is fine for us. Yeah. Curious. Yeah. How many data points? Why do they spoil this? Or do you know? It's like a 2 billion. So it's a lot. It's a lot of data points, yes. Multi-channel, right? When we're looking at multi-channel, which is again why I said multi-channel is so important to not just having a lot, to not just having a binge, to not just do phone calls, right? Multi-channel approach, reaching out to people so they see you in different ways, feel like you're a bigger company, feel like you're adding value in a way that's not just like ping, ping, ping, ping, ping,

[00:59:19 - 00:59:59]
talk to me, talk to me, talk to me, right, is higher, right, a huge engagement increase, right, versus a single channel if you do more things. Reply rate rate is higher, route rate is higher, you can also try emailing a couple contacts at the company, right, here's what to not do though, because some people interpret that and do it like this, now I'm going to spam 10 people in the company with the same message, and then they're all going to be like, did you get those annoying messages from that person who's like, send this generic spam message don't do that if you're going to email to different people at the company you should message them what they care about they care about different things you message the sales leader if you message the marketing leader if you message the robot person if you message the like back-end engineer they all have different messaging at the same company right don't

01:00:00 - 01:10:00

[01:00:00 - 01:00:49]
send the same message to all the people. That is not what that means. Yes? Okay. When I was thinking about best practices, show value immediately, personalize. We've said a lot of these things. Keep it short. Remove I. Tie the value to customer value prop. Feed solution. Not a lot of links and show when you can. I'll have an example of something you can show. But showing in a way that is interesting, that is telling something they don't know. right not showing like not showing like look at my demo look at this cool thing look at this thing that i made you want it to be a here's something like very interesting that i think you would find relevant and here's why i think you think it would be interesting right people like to learn new things they want to be taught things that they don't know about or if you have data or some like interesting tidbit of information that they don't know people love learning right um so we're talking

[01:00:49 - 01:01:38]
about adding value, right? You can do things like case studies and have that later in your follow-up, but like a customer just like you did this, had this problem about this result, right? You can't have things like that. I would call these like sales collateral, right? And so when you're thinking about sales collateral and things you can have, whether it's like research reports, which some of you are creating your own research reports, which is great. What can you collect and combine from the industry to deliver people value in a way that is compelling for them something they wouldn't otherwise get right taking time to interview a bunch of leaders at companies and put it together um in a research paper interesting that takes time that's not something everyone's doing a lot of people want to do it but they don't do it because it does take more time than ever right we're thinking about it in the guide like how to do something like how to set up

[01:01:38 - 01:02:23]
um a deal for your company right like have some best practices to do right you can get a lot of engagement a lot of things with that as your sales team grows if y'all have this comment your sales And then it's usually badly designed. It has random things in it that maybe you don't approve or want to send out. So I would think about what content you want to have before you start adding salespeople because if they've sold anywhere else before, they will create this on their own because they need to have some content to send to people, right? Okay? Let's look at bad messages. These are always fun to look at, yeah? And see what we don't like. See what we don't like and what is weird. Okay? Why don't I like this one? I'll let you read it and then tell me why I don't know. You've got to read it.

[01:02:24 - 01:03:10]
Walk up closer. Or I can read it. Do you want me to read it out loud? Or go ahead and go through your line and see it. Can I ask you a question on the previous slides? On the outcome of e-mail or e-mail. So we've had a question about how it's optimal to allow this. a large like for example, you can either find the head of HR or you can go through the HR team. If we need a outreach, like hey we have this new platform, we do this and this and this. If you move the media to the area, maybe it's better to go to the authority of the area.

[01:03:10 - 01:03:59]
I mean, because one of them are probably ignored, right? But I don't know which way. Like, you're a pretty team of the McDonald's. I don't know where they spend time. Do you know where they spend time? Are they on LinkedIn? Are they on their email? Where do they, like, respond to things? Where do they spend time, right? That's important to know for ICP, right? Like, where they are and how they want to talk to. So, like, you're just testing and trying. Also, maybe you want to call them, right? Also, maybe they're a little bit older and they're like, I actually don't like being online. So, maybe call me on the phone, right? Maybe it's the McDonald's in Palatine and they're like actually we slowly communicate through WhatsApp. They're like you can send this to Fiverr, right? You can send this to Matt to Cheer, right? Because in different markets, like people like to communicate different ways. And so it's not disturbing. What is like would be disturbing is if you found them on every social media platform whatsoever

[01:03:59 - 01:04:46]
and copy and paste it the same exact message across all of them, that would be weird, right? But if you're sending an email, you're sending, right, we're including, we're giving them some value. We're giving them something valuable, something interesting, right? The LinkedIn connection might just be like, we'd love to connect, we're in the same space, are you going to any upcoming conferences, we'd love to meet in person, right? But you're not sending out via email, right? Via email, maybe you're sending some content, something else, like some problem you're solving, right? And so your content is different across the different channels. So it's not just copycating the same content. Because

that's weird. Don't do that. Yeah? Sure. Yeah. Okay, what do I not like about this email? What about it? What about it? It's used to the person remembers what they liked on the webinar. They have more ideas, right? So, but if you know, you bring back the signals that they found somewhere about this guy,

[01:04:46 - 01:05:33]
this person has really no reflection of what they liked and the issue. So it's like random, a way for them even though they like it. That also helps with eye messages too. He's using uncertainty there. He's uncertain about his own upper. I'm not sure this is something like that. I hope and I may be in the same category. Maybe. I don't know. So give me the client advice. Yeah. Just send this video. That's the client advice. Right. This video. Absolutely. Without adding value. Also, like I saw you engage with the post. I saw you thumbs up that thing. Cool. That's not engagement. Right? That's not adding any value or saying anything. You're just telling me something. or you have like one of the al-alums look and be like, tell me the activity people did and then you forget that you're not.

[01:05:34 - 01:06:21]
Right? Not valuable. That's literally not like, that's not a useful, valuable customized data point. Right? That is a ridiculous data point. Don't do a data point like that. Don't do a saw you did this. Saw you on the street. Yeah. Uh-huh. Yeah. No, that would actually be too. Saw you on the street, want this, I have you were too far ahead, would love to grab coffee, that would be fine. We would totally do that. I saw you're waiting, yeah. Yeah, yeah, that's what this is like. interesting right? I'm going to write this one. I want to watch person. What do I not like? Like really, really, really, really. Yeah, pretty weird. I've researched all the things. I know everything about you. Well, no. Right? We want to know about them, but we don't need to tell them we know about them.

[01:06:22 - 01:07:07]
It makes sense that it's just like too many. Why do you use so much information about what I'm doing? I understand that you read my post. It's enough. I'm sure that this is some kind of pretty easy. Because it's just like word vomiting. Here's all the things I learned. But don't do that. People do it. People do these things. So we're going to use them as examples that we're not used so you can recognize when you see them. And then when you get ridiculous emails, you're like, this is a good one. Can't wait to share it to my team because you know what people do when they get ridiculous emails. They share it with their team and they're like, can you believe this person's done this method? Right? You want it to be in a good way. Even if it's a compliment. That was so much. Overmine. Inevitably.

[01:07:07 - 01:07:52]
If this is the one batch where someone's email does not come up with multiple paragraphs like this, I'll be in full joy. I will be so full joy there's always something that comes up and is like, here's my paragraphs. I don't even want to do this, right? You don't even look at it. You're like, there's absolutely, there's like no, it doesn't even matter with this, I don't care. Okay, I'll work this one. Really? Yeah, I go up to like this piece of shit or this piece of shit. Yeah. This guy. That also with the company there, because sometimes they don't switch it out, or sometimes it doesn't do it correctly. It's like, hey, Sarah. You're like, well, Sarah was obviously in another company. I am not Sarah, right? You're good. Like ones like these? What else do I not like about this one? Tell me what I don't like. Tell me what you don't like.

[01:07:53 - 01:08:42]
I mean, just in any way, it's a little saddle like you didn't care. So anyway, let's move on. Here's one thing. But also, like, I've been following you. So impressive. So what's impressive? It's impressive? What is it? What? You just said it's not fun. It's ridiculous. Why are you so amazing? Okay, what is amazing? And perhaps this would be the warm-up message, so I would not ask her to jump along the way now. Mm-hmm. Tell me if something is impressive. What do you like? Are you trying to do something similar? Are you falling in the space because you care about some innovation they have, some way they're doing something? Like what is interesting? Block. This is a block. This one. What do I not like about this one? Well, I think immediately starts talking about himself

[01:08:42 - 01:09:27]
and herself. very me me right which is what a lot of people do right now if you go back to your questions are you like hi i miss we do these things uh this one is literally me me me it's like we literally and then try to put them some social media and try to be more novel it was probably in the database lowercase and then and then didn't write to capitalize. But the rest is not lowercase. If more of it was lowercase, I'd be like, maybe you just write lowercase. It's not written with love. It's not written with anything. No thought. Absolutely no thought. Zero thought of finishing it, right? And then you're like, oh, just following up. I hate the just following up. Just following up here. I'm like, you guys, just following up.

[01:09:28 - 01:09:59]
Did you get you to see it? Maybe you missed my message. I'm just following up again. No, right? Adding no value. We're not just following up. Why are you just following up? I didn't respond the first time. Because you're going to be engaging. You're going to care about what I care about. You're going to tell me about a problem I have. You're going to give me some value. You're going to talk about something that is relevant to me. Yeah. Even if you're like right for some of your ICPs, being really casual might be better. Right? A couple sentences from the CEO, more lowercase. All lowercase. No punctuation. Don't care. Right?

01:10:00 - 01:20:00

[01:10:00 - 01:10:44]
If it looks like it came from you and you're writing it and you're sending me a quick message because you saw me do something that was interesting, you're sending me a quick message, just type me in our account and sending it, that is way more valuable. I'm more likely to respond to that than to this mass message that's just like me, me, me, following up from the chat. Just one thing also though, because I'm following these emails to make sure I know what to do, what I'm about to do, it can be the best email in the world, right? I don't trust it. You don't trust it. I'm like, cannot trust it. You can at least show me that you're real. That you're doing something? Yeah, and they're probably using one of the many email tools that you can't put it in. Or they didn't pay out for you to put it in. I always ask for at least any website so I can check anything.

[01:10:45 - 01:11:31]
Yeah, to see something. Okay, good. This one. I don't know why, but. So you're burning all the bridges in the first sentence. There's no next step possible for this. So what were they trying to do? They just canceled that company altogether. What were they trying to do in this message? That they didn't do well? They tried to do well. These are competitors, actually. Yeah, 100%. Yeah. But what they're trying to do, right? They're trying to cancel millions of females, but all the world around. They're trying to be like, oh, we did all the LLMs. We have all these people using it. We're a Stanford team because I'm the mayor.

[01:11:31 - 01:12:12]
So we're a Stanford team, right? Which they're getting excited, trying to do that. But this is not, this is the end. Only about them. Trying to do a little social proof, but they did it badly. Right? Because they're trying to make me feel like, oh, so exciting. I don't feel like, oh, so exciting. Right? What about that? What about that? It's all infectious. Oh, yeah. Because it feels like it's an L1. I mean, they obviously didn't write this. But I already know they didn't write it about the badges. I know there's nothing the same method, right? What would be better here? What would be better? If they targeted or did anything aligned with what I would care about. I'm not their target customer. They shouldn't be thinking about me.

[01:12:16 - 01:13:04]
What would be the message that you would answer? I'm not a product. You can just ask. I know, I probably don't do that because can you connect me? Can you connect me to someone else? Right, sure. Or like I need advice, right? Saw your advising companies like 500 YC, like we're building this thing. We have like, we built it with these two people. Like I have like three quick questions. Could you give us advice, right? The point is there is no point. Because I give advice to startups, so I'm more willing to talk to them, right? I'm more willing with some other people because like I do it more often. If someone writes me a very personalized message and wants help, I will generally help them. Right? There is no pain point. This is just all that is. Yes. It's just like, here's what we do. I'm sending the exact same messages. This is my product, Woodrowly, right?

[01:13:05 - 01:13:52]
I am targeting the massive time that they are spending on sourcing, finding candidates, even trying to engage any candidates whatsoever. So this is my first message and there is one very, very upset. So we have about 50% in our sauce on about 10,000. Do you want to put one of yours next to this one? Over 140 companies in Germany use Jena. This is about us, but then we go in and explain including some two known brands. Stenton Chase and Altman, we also put it there as a proof of trust. to find the candidates who would never apply to job posts or happily working in the companies. Do you feel that this might be a good solution to most of your team's recruitment?

[01:13:54 - 01:14:38]
Shall I give it a go? And getting good responses because it depends on your ICP, right? What works for his ICP for his

partner. I understand that from German, it didn't sound so good now. But it's actually three lines. This is the point. The most difficult thing is to put it in 120 words. Like something short. Right? But like also why it's so important to know your ICP. Right? Not just that it's a bad message, but it is such an untargeted message. It doesn't apply to me at all. I cannot help them with that thing. I'm so far from the ICP. They're sending a bunch of messages emails to people to help someone move life. Right? What are we going to find? I'm going to just use them as an example like this. I guess they're getting, I guess like no PR is like bad PR right?

[01:14:39 - 01:15:24]
No they're open. Talking about it. Okay this one. Who's seen these messages? I've seen these five thousand times. It feels like they're this. Yeah? All the time. People send these all the time. Just bumping them to the top of your inbox. Are you not interested? This is the last message I'm going to send to you. I won't send anymore. Okay, don't send anymore. Like, right? Like, when you're thinking about your IPP and how to respond and how to do things, you don't want to look desperate. You don't want to say things that are like, haven't heard back? Yeah, I know you haven't heard back because I didn't want to reply back. Like, why are you telling me what has already happened? Right? Now you're married. It's just a thought. Yeah, just thought.

[01:15:24 - 01:16:12]
But a lot of people will do follow-ups like this, right? Where they're either like, this is the last message I'll send to you, you won't hear from me again, I won't put your inbox if you don't do this. Follow-up three times, are you really not interested, are you sure you're not interested? Right? They don't want to send messages like this. Yeah? People send them all the time. We have been sparring from some casinos. Like that? Don't leave, don't say! Okay, where are all this one? No shortage of anything else. Insect for you. Insect for me. What an insight. Did this add any value for me? No. It seems like you're really good at stuff. It seems like what the fuck. Yeah, right? If you don't know your recipe, if you create a generic message

[01:16:12 - 01:17:00]
that's like, seems like you do the same. It looks like you're hiring salespeople. it looks like you are increasing revenue right okay those are like things factual facts you just told me some facts right tell me something interesting give me some value connect with me as your potential customer in an interesting way right i feel like there's just so many emails right but when you see them when you start thinking about them you're going to see way more right because you'll get them but i want your messages to be so good and targeted and so direct and you stand out so much more right because a lot of people are sending messages like this yeah okay let's look at some better messages not that these are the best messages but better right and he says like some components let's talk about what i like about them or what you think i like about them okay read this one probably hard to read get closer if you need to get closer

[01:17:00 - 01:18:01]
why do i like this one Move up everyone, pick up. I know it's small, I should know this now. I'm kind of confused with what it is. Oh, what it is? Yeah. Okay, I'll give you context, right? This person is messaging the EPUB marketing at a company called WeGenius, right? And they're like, hey, the director of demand gen and grow box, which is this competitor return my email, right? Because, right, I'm reaching out because, um, competitors are targeting your name, right? You're probably not looking at or paying attention to it, but here's what it looks like, right? When you search, like, um, lead genius and look at here, like, outbound authority.com, right? It's one of the top ones when you look at the company, right? Because grow bots would help you, um, would help competitors, like, target against your name, right? And they're like, this is what it looks like. This person, like, won't return my messages because there's already people in doing this.

[01:18:02 - 01:18:51]
um but like do you want to shout about it we can help this not happen right because you're giving me an example of something that they are not thinking about or didn't see or just wasn't top of mind for me you're like showing me something that i don't know right and you're saying it in like an interesting compelling way if you're the vq of marketing you're like did you know that people are like targeting your name like this there's a company that's doing it now maybe you didn't know but i'd like to talk about it student help and not happen right that's interesting message that's very specific that's very targeted that talks to a pain point that i have tells me something i may or not know or maybe you didn't think was a bigger problem right is that like an interesting message and this is your point show if you can yes show if you can right not everyone can show something and everyone can show these things so it doesn't have to be your product or how like what or how you can help or what you can show not happen but it could be like some other data point or data set

[01:18:51 - 01:19:36]
right i'll have another example that i really like in a minute but like this is a good example of being able to show people something right so they can see something so they're getting value you're like giving them value right away right you told me something i don't know even if it was your computer product i learned something new right or i've learned that there's a bigger problem than i thought was a problem right okay let's look at another one what do i like about this one not the best message but i like something about it yeah he connected to you and it feels like cool right so you're right there and the boost he doesn't do pass along if you're not interested

[01:19:36 - 01:19:59]
that's not the person dealing with swag yeah not telling the swag a quick thing about what they do right that's one like right like going to Sasser right it's very complex a lot of people are at Miss you with cancer maybe I saw you briefly saw a colleague saw someone else that was there right children to pass me off to another colleague here's a short thing it's a very short message right it's very direct and short but it doesn't

01:20:00 - 01:30:00

[01:20:00 - 01:20:47]
feel like overburdening. It doesn't feel like too much. So like, here's what we have, like, connected side with this thing. Is this the best message? No. Is it no commensure? Yeah. Right? And I also like the call talk, because it's much easier for that person to make a decision, versus you give them choose between 35 next days, and give them a slot. If tomorrow, it's much easier for them. So I like that. And also to me, right, I feel like the market went from choosing specific days and times and going back and forth to like calendly, but now calendly feels very impersonal to me. Someone's like, choose the top of my calendar. I'm like, oh, this just feels like a massive email you sent out, right? But if you're like, are you free next Tuesday or Wednesday morning? I'm like, oh, that feels like more nice. It feels nicer now, right? If you're just nice to be like me, who's like, it feels nice to be a whole night connection, don't send me a calendly link.

[01:20:47 - 01:21:36]
I will not break in. I will probably ignore it and not respond. Is it easier? Yeah. personal also yeah right sometimes the easiest thing to do is not the thing that's going to get the most engagement right or the most traction okay let's look at some more this one what do I like about this is a follow-up what do I like about this follow-up so something I think you're in this week from last summer probably you are starting I started thinking, what was last summer, maybe I discussed with this person. Talk about... Yeah, yeah, yeah. We have to get it... This is really... Oh, is there a big time? So, in my mind, I was like, okay, perhaps we've done before.

[01:21:37 - 01:22:23]
So people are doing it, so people do it very badly, where they're like, read your revenue this quarter. We did not, that's not a read anything. This, like last summer, I went to each other, I don't remember, right? I talked to a lot of people. I like the follow-up. I like the order, I try to give you another call, right? If you are doing a multi-channel approach, you call, you have a voice, and I just left, like, just give you a call, wanted to check in, right? To refresh, here's what we do, very short, right? Not a lot of information, not a lot of context. Here's a short value prop of what you care about, right? Of what we do that you care about. And then is there a better time to chat, right? Because we're selling here, right? sales, right? And we're like, here's the main problem if you want to chat about it. Like, is that another time you can call someone to barge an internet? Because as a salesperson, I have more structured things, right?

[01:22:24 - 01:23:13]
If you're selling to an engineer, you should probably not call them because they'll be very angry. I don't know. Like, when I see this really in the subject line and the email is not in the store, it feels like a stamp. You are also an engineer. Do you get a lot of emails from people following up on discussions? talked about some yeah but they're all in email threads yeah they're not like you know like separate so think about like your icp of who like the paragraph right you're sending right to someone like you who's like no this feels scammy or like um debarus also if you're like no it feels scammy i don't like it right because a lot of the re-emails that you get are not actually either from following up on a discussion or following up about talking about something right they're like read your revenue read your goals for this quarter read your things and those are not

[01:23:14 - 01:24:02]
talk about that right that is not a thing you just you just put re in and put some like random subject line of content that

is just actually not following up and being all right so i think the difference between like this one it's like if you have a discussion maybe you met with a conference maybe you did a thing it feels like a more natural like follow-up than like a forcing the read to happen and putting a random sort of thing right and those are like minute details but they are details that make a difference and not important. Right? I have one question. For this kind of personalized emails, should we use our main mailboxes or dedicated mailboxes? No. I would use other mailboxes. I would use another domain. Yeah, I have a whole page on it later that I will talk about.

[01:24:02 - 01:24:47]
Okay, I have a question. Yeah. Okay, here's another one. What do I like about this one? It's a case study. Yeah, case study. It's a strong social group, I assume for that, it's a big thing that was Zendesk. So they know Zendesk. Oh, you cut your cap by 20%? That's interesting. Yeah, you can send it to competitors of Zendesk or to... Oh really? Yep. Okay. Yep. They're like, here's how we help your competitors. Where are you spending a lot of money doing this? What case goes? But no, but they're not sending them what case I did, right?

[01:24:47 - 01:25:31]
They're just like, here's a couple data points of a competitor you might want to know. You're giving me new information, right? Telling me how someone else is doing something. I would at least have a conversation. Like, how did they do it? I might not buy it, but I'm going to have a conversation because I'm interested. your goal is sending your message or emails to just get to the next step. You want to get to a conversation, you want to get to a response, you want to get to something else happening. Some engagement. This one. This is an example from previous Baptist Church. Seven. And this was their original message. They were sending. And then those are their new messages. Tell me what I like about their new messages. Short. Okay, what else? You left something. They gave you some fun facts.

[01:25:36 - 01:26:21]
You're right. I'm first started with I and second started with an interesting fact for the ICP. Because her name is not interesting fact for the ICP. It's not. She's not well known. Not a person. This one is like, oh, we do all this stuff. It's really interesting. Can we talk to someone else? There's so many asks, and there's so many things in this, right? So many things happening over here. And over here, right, they had a ton of great data. So much interesting data that the airlines, like, weren't using or didn't have access to. I mean, they could get access to it, but they weren't using it, right? And they're like, did you know this interesting fact about your flights and your aviation? Right? You did not know. And, like, do you want to chat about it? Like, these are super interesting, like, about your routes.

[01:26:22 - 01:27:10]
same response rate to doing this because they're telling the airlines things they didn't know right people were interested in learning and things that have a conversation and like open up the door to have conversations with people that wouldn't talk to them before right by sending the other messages right also she throws this i don't really want like jeans like oh no i don't have this inside and you can have them yes yeah there's way more interesting things that you don't know but if you get a call you will know right they built a lot of their like webinar strategy providing value to airlines and now all of the major airlines in the world come on the webinars finding them at conferences because they're like oh you're the guys doing control avoidance like we need to talk to you like oh can you come speak at this because they see them these messages they provided value and they created a webinar presence that made them look like a much bigger company

[01:27:10 - 01:28:04]
than they are 13 of five right but all of the major airlines right united british airways scandinavian air iberia cargo lux all of the airlines come to find them at conferences because they're like can you help us like with this? We want to talk to you because you guys know so much, right? Because they're building a brand, they're building a presence, they're providing value and talking to people in a way that's not just by our control going in software, right? This one. What do I like about this one? I mean, people are very proud to have the there's a chance, right? Like they celebrate them and she or her give that celebration to that person. I don't know. For me it sounds like the same reaction radio thing because

[01:28:04 - 01:28:49]
it's so easy to find the signals that... I have one. So for, I mean, so it depends on your RCP, right? So for context for this one, like, Playbio and Outreach are competitors, right? Because you're using, like, the same insights and doing the same things. And so they're saying, right, like, this is how we work with Outreach and the things when they come on board with this. So that's, like, do you want to do the same thing? So more like competitive analysis. It is like the first 90 days as a salesperson. You do have a lot of pressure from the board, from the CEO, to, like, prove things out

very quickly. through things or else there's very very high turnover in vp's of sales and so you do have a

[01:28:49 - 01:29:39]
lot of pressure that in other roles you do not have right if you have vp of engineering vp of um vp of success like any of those like you you are unlikely to be let go in the first 90 days the vp of sales in the first 90 days if you don't show some things like they float them very fast and so when you're speaking again for your icp for the person that you're talking to for the pain points or the things that they care about i like this one because i know in the first 90 days they some quick wins or else like the boards would be like get someone else like this is not a good fit like you don't don't keep them right um but but if that's not your icp right that's not who you're selling to then that's not as relevant right and then you're like this wouldn't work for us we're talking to product people we're talking to marketing people we're not talking to people for however in the first 90 days like they're like this is our time to reach out to you because like we can show value with your competitors because you have 90 days to show that you should

[01:29:39 - 01:30:00]
keep your job right which is why your is so important and knowing that they care about the Because for each of your different funds, I would expect you all to have different messaging because you have different ICPs and you're targeting different people, right? Okay, just some small actual things. Adding LinkedIn, change your apply rates from 3 to 11% because,

01:30:00 - 01:40:00

[01:30:00 - 01:30:45]
again people see you in more places right if you send an email they don't respond you send them a message later right then maybe they'll see your next email and be like oh I thought you did this thing like I'm thinking of you in a different way one also like one big point that I also want to say is there's an example I have there's I don't know Namely. They're like at Namely and they're like at the HR software thing. They're pretty big. But they, Colin from Namely was this SDR that messaged me every two weeks for a year and a half. And I replied to zero of his messages. Zero. I was like, no, I don't need it. I don't need it. I don't need it. I'm not responding. I don't need it. And I was like, now I need something. It is time. And I was like, hey Colin, do you want me to call? Right? Nothing

[01:30:45 - 01:31:31]
for a year and a half because i was like i already did i'm not yet but he was the first one i thought of and i ended up buying from them like a 200 week deal because i was like i need this now and it's really great and you're top of mind because you kept following with me and the timing was just not right originally but then it was right and then i was like okay now i need you so when you're thinking about right reaching out to people and you're like things aren't working messaging is not happening i'm stopping this icp i want you to also remember the timing is important and maybe the icp you're reaching out to is not a good fit right now, but they might be a good fit later. Right? I literally zeroed and opened any emails, but I was seeing a call for me. I was just annoying, no? I get a lot of emails, right? You get a lot of emails. It was just like, you've done some content, they have some webinars, they did some things, so here's how we help some other companies.

[01:31:31 - 01:32:19]
And I was like, I do now have 800 people I need to put on something else because our internal thing is bad. We had our internal thing for a while, it was like, filter by, right? I was like, internal is fine. That means something else. Right? So when you're thinking about your ICP and thinking about the problems that you've had, right, and thinking about where you're adding value and when is the right time, if there's like a trigger, something that happens, or just like being top of mind for people, right? Like identifying when that is or what pain points are happening for them to decide when it's time, right? I think for me it was, what happened there was, it was like way too chaotic managing people's like time and like payouts across like Bitcoin and like all the different payment things and be able to like connect with it on anything but tracking their time and doing all things was just like too much chaos in terms of stuff

[01:32:19 - 01:32:37]
and I was like I need something else that's easier. This is like too much. So you never know when someone will come back later and be like hey I remember you guys we didn't need a product at all but no actually I thought it was interesting. Saw you guys somewhere, wanted to reach out. Right? Yes. On the previous slide. Yes.

[01:32:51 - 01:33:40]
So that was like a general for all industries right and I've just given an example of something you could do because

some industries respond better if you don't have a blend message right so I did across all industries all markets all things of like overall this is what works but you should look at for your specific ICP, right, for your specific thing what works for you. For your industry, right, like because it says like this have a higher number, like 22% higher or something, but in some industries it's not a percent higher, it's maybe lower if you have a connection request, right? And so you need to know your ICP, you need to know how they interact, how they respond to build your own cadence, right? Because they're going to be different. Every industry in ICP is different, they're not all the same. So I was like, there's no one thing that's going to work for everyone. Right? Does that make sense?

[01:33:42 - 01:34:26]
Great. Great, great, great. Warm up messages only work if they're real. Right? I think we talked about this like a little bit. Right? Thinking about how you can connect with messages and connect with them on like a personal level and not just saying like, saw you posted about this. Right? You can say, like, so I'm posting about this. I'm having the same problem with my team. It's actually really hard to recruit good engineers, like, nowadays. Can we just have a quick chat about, like, how you're thinking about it, what you're doing? Right? That's a very personal message. Don't worry about nice message. Right? They post about product loss, launch, like, talking about something specific. Mostly talking about something specific. Right? Not just general value business thing. You want to be more specific in that value. Okay? Here's an example of bottom-rocket growth.

[01:34:28 - 01:35:15]
message messages like 67 percent which is really high um his best performing message was reaching out about gumroad courses and asking um about what that will like look like um they take about 10 percent of every sale is that right right he's not talking about this product he's not talking about anything that he's doing he's like asking and saying hey i saw you use this right and they're just asking you a question like is this true is this true what happens right like opening up a conversation right when he's thinking about here is how personal the message is wrong message to write be personal to resonate he knows his ICP very well right and is thinking about how I can communicate and connect with people in a way to get them to connect with me so I can then build more community around

[01:35:15 - 01:36:03]
it right I was talking to someone yesterday about there's a community called modern sales pros in the Bay Area now it's larger but it was this founder added all the VPs of sales on this email chat group, just in a regular Gmail chat group, right? And then was like, created like conversation, would ask things, then ended up doing some events. Now he has all of the VPs of sales across all of the companies, not just in the Bay Area, but across the U.S. and also in the world. It's a huge community now. They run a ton more events, but then he built the sales product and he sold it to all of them, right? Because he's like, now I know all of you. You all talk to me. I built this value, gave you this community that wasn't there right and now we're going to build them up right can you do something like that like you probably can right it does require more effort right low cost

[01:36:03 - 01:36:47]
money wise monetarily but higher cost like yourself doing it but you're also like building this brand right because now you can basically build any sales tool and get feedback from a bunch of people who really took me in and also sell it right forever okay okay guys to track a lot of you are Number of contacts engaged, touches to response, trending open rate, trending response rate, right? Because your open rate is probably going to change. We need to be talking about it. If you have people doing outreach and outbound, they should not be doing it alone, right? Talking about it together, talking about what's working, talking about other messaging to change, right? Like you should be doing this on a weekly basis if you're doing outreach. You shouldn't be having someone just like sidle it on their own, trying to create new messages and send new content and send things, right?

[01:36:48 - 01:37:34]
Because you should be iterating. You should be seeing what's working and not working. You should be talking to more people in your network or community about what's working. If something performs very, very well, usually people don't want to talk about it. They'll give it to themselves. But you probably know other salespeople, other people in your space, other people in your market, that you can have conversations about like, hey, we're having a hard time reaching these people. Are you selling to them too? What's working for you? Right? Tools. I have tools. I think most of you already are using some tools. So I just have some examples of some that you can use instantly, Outreach, on Lister, Salesoft. Just different ones. If you want to talk about different ones you're using or not using, I'm happy to chat. I have them there as reference. Email infrastructure because you asked. We have this here just as a reference for you, right?

[01:37:35 - 01:38:20]
There are, never, never, never, never, never use your domain, your main domain for emails, right? Always set up a separate domain. Probably set up a couple other domains, right? Because you're going to burn your domain with anyone. they're not a good fit. Your marketing messages, if you send out like marketing campaigns or updates or like a newsletter, keep that as a separate one also. And then your outreach one should be its own separate one, probably too. Right? And you should warm them up. Make sure you change like your settings, try to have different mailboxes for each of them. Right? And you can do like warmly to warm up your email domain. I don't know if anyone's doing that. If you have more questions or want to talk about how to set it up, I'm happy I want you to talk about it more because that is really important. But the main thing you should know is not to use your main domain. Yes? Because of the application.

[01:38:30 - 01:39:20]
and then no one can send an email to anyone because they all understand. And we're like, oh, this is a huge problem. Right? Don't do that. Yeah. Yeah. And you have to be very careful with the domain. It sucks to get blocked or abandoned. Sure. But we can talk about more, but this is like, just use it as a reference to start to set up. But definitely do that. it's really important to keep your main domain. Yeah, for sure. And for just like very personalized emails, we also need to use some kind of instant review or something like that, right?

[01:39:20 - 01:40:00]
I mean, it looks like it's so personalized that you just spend, let's say, 20 minutes per one email, not the sequence. and it looks like it sets like manually. So it's very good, no? No, you can set them up. I think at first, when you first start writing them, they'll take you longer because you're not used to doing it. But you can also set things up. A lot of you are technical. Set things up to look up content for you. Use like, well, if you're not technical, use a Lindy or something. If you are technical, you can build your own. Like, here's a person, the company that they're at, find me this information, put it in a format. You edit, change it a little bit,

01:40:00 - 01:50:00

[01:40:00 - 01:40:49]
right and make it more personal and send it but you can have AI do a lot of the research for you right. So in my writing we can create a template like template for sequence and then just change a beat depends on the user or Yeah, you can have like some general things, right? For some, right? Like maybe if you're like, we really want to get the Google Cloud team, right? Maybe for that one, you're like, I'm going to manually write all of these. I'm going to change all of these and make them more specific and way more different, right? Because the higher value the customer is the more customization you should do. But like for any other customers or people, right, you can create like a cadence, like your cadences of emails that you're saying that sound personal that are adding value and adding value.

[01:40:49 - 01:41:01]
some things into it just don't make it sound like you remember the examples that were like saw you like this thing not like that right like more value yeah right maybe you're gonna try okay

[01:41:11 - 01:41:59]
so if you don't use a different domain and you get marked as spam or you get flagged because like Google has like a low bar for like what they will flag or what they will start to consider spam then any email that you send from your email no one's gonna get it to an investor to anyone else you're gonna mark the spam and you're just gonna immediately go to spam so don't use that one keep that one safe but you can use like your same name at this other domain right that like a marketing dot Traveras. I wouldn't do I think like for subdomain I think you would do like the higher value ones like if you're reaching out to like some enterprise or Google like big people but I wouldn't send the mass ones at the subdomain.

[01:42:00 - 01:42:54]
What's the perfect number to create emails under one domain? Say that again. What's the perfect number of emails under one domain? Like how many email addresses you can have that you're sending from? I mean, you can have as many as you want, I think 2 to 3 is fine, you don't need more than 2 to 3, right? I think 3 is the best number. But how to also, because some people would use fake names for people, and I was like, people can easily look it up, use your real name. It doesn't matter, right? You are that company still, I'm not sending a message. So we discussed with other Russian speaking guys with Russian names that they tried different versions and different names. For example, they

changed, let's say, Nikolai to Nik or something like that and reply rate much higher.

[01:42:54 - 01:43:42]
Like three times. Yeah, but it depends on your market, right? If you're selling to a German market, if you have a more German sounding name, it is better, right? If you're selling to a US market, if you have a more American sounding name, I think Nicholas did the same thing. He changed to his Malaysian name, like Janxian, but then he was like, I wasn't getting replies from customers who wanted to sell to the US, so I'm back Nicholas, right? Depends on your market who you're selling to. But in Malaysia and China, Janxian would be better, right? yeah yeah one of the things okay so some things to do right i want you to create outreach messaging right um you can create some workflows right if you're going to use uh like a lindy or use or use something to like create full information for you like create some workflows to do that you don't have to do the research yourself um what i want you to do is create messaging we have like

[01:43:42 - 01:44:30]
30 minutes if anyone wants to put up messaging they already have or wants to write some messaging based on what we did and talk about it. We can do that in the next 30 minutes. The afternoon is discovery calls. So we're not going to talk about outreach anymore. So this is the next 30 minutes we have outreach. If anyone wants to write an email to put up to get team feedback, team think about anything, we can do that. Or if we know for now, we can talk about it in office hours. Afternoon is discovery. No emails. How many emails should we write in these 30 minutes? Secrets? Can you have any existence? Like one, two, three? Anyway, some people struggle with like one or two, right? If you could, yeah, one or two and you can put a couple up. Let's say you get like 10 or 15 minutes and then people want to go up and we'll talk about them as a group for the last 15 minutes.

[01:44:31 - 01:45:20]
And then happy to talk about them in office hours if you send them to me separately. I'm happy to get feedback on them as well. Email, so you can do messages. Either one, you pick. Whatever you want to get back on. Okay? And sometimes if people are not flying to a business or individuals and want to do investors, you can put up an investor email. doesn't matter to me we will feedback the same way right the same way you add value and do content and tell interesting things is the same way you reach out to professors right yeah but let me first ask you about our idea so we sign super metrics we learn super metrics and my idea is to go to their clients and tell them something like that so guys I see that you use supermetrics and they are our client and we build this and I think it would be relevant for you

[01:45:20 - 01:46:10]
and you can try the sperrometric section here and provide a link to the sperrmetrics page where our agent lives and yeah some kind of history So are you saying like our customer super metrics saw this change happen, saw this value and we think you'll see value too? Yeah, because they trust the super metrics and if super metrics which is probably higher or bigger than this company trusts us, so maybe it will work. I think yes, I think like your framing is really important. Like if you're saying like this customer who is similar to you saw these results, or are you saying, are you just using a social proof?

[01:46:11 - 01:46:56]
Like this person you already trust, like saw this value, like saw this change, which helped them change something, right? We think that you could do the same, or we'd love to try out how we can deal with your team too. Like you could try something like that. But like shorter and more concise, right? I do want to bring your competitors for SuperMetrics. Yeah, it is there. I want to test some competitors. But for SuperMetrics, I'd like to see maybe some their customers we can try. I think I'm not fully understanding. So SuperMetrics customers you want to train it

[01:46:56 - 01:46:58]
because they want to use SuperMetrics?

[01:47:17 - 01:48:02]
I think it's harder to say because you use them and they use us, you should use us too. That feels like a lot of people are doing this. It feels better to say we helped supermetrics because they know them. We helped supermetrics to choose this thing. Right? And we're helping companies like you do the same. Are you interested in like, in chatting on how we can help you like capture more of your leads, do more of these things like this. Okay. Okay. Okay. So 10 minutes. We can have any questions. We can talk all the time. But 10 minutes to write some emails and we'll put a couple up and talk about that. I have to just raise it to this domain, J.P. I have to stay on using, like, how great I can use it .

[01:48:04 - 01:48:50]
I have it all time. It's a start. It's something that's just because people don't, like, really look at them. Like, they do look at them, but, like, do you like doing Jiberos? Or, like, you know, like, you can't go, like, With emails, like you said, that's part of our software that should go through this. This one? Anyone who's pre-customer. Any of your like, out-of-the-day, right? Any of like, cold messages should go there. Okay. Right? Anyone after they've signed up? Because they're like your customers, it's fine with customers. Can I give you any like, follow-ups back to them though? After they're not customers or a few more things, like you might get more to spam. So I would do this for that, right?

[01:48:51 - 01:49:16]
Gotcha. Yeah. Okay. Okay. Okay. Would you like to read as you want right now? Yes. Maybe to a business, maybe to an investor, maybe to whoever you are. Any more investor. Here, can you take one of yours, please?

[01:49:29 - 01:49:47]
Yeah, 10 or 15 minutes to write, yep, great messaging. If you have messaging and you want to show everyone how great your messaging is, you can do that in a minute too. Okay. Probably seven. Seven, six. Yep.

01:50:00 - 02:00:00

[01:50:00 - 01:50:01]
you.

[01:50:34 - 01:50:36]
Thank you.

[01:51:05 - 01:51:06]
Thank you.

[01:51:35 - 01:51:37]
Thank you.

[01:52:00 - 01:52:02]
Thank you.

[01:52:46 - 01:52:48]
Four minutes.

[01:52:58 - 01:53:08]
Yes. Yes. Good. Good.

[01:53:42 - 01:53:43]
Thank you.

[01:54:39 - 01:54:54]
How many people think that they want to get an example to talk about the people? Two. Only two? Then you can have five more minutes. Okay, okay. Two more minutes and then you can have five.

[01:55:14 - 01:55:15]
Thank you.

[01:55:52 - 01:56:38]
Thank you. Thank you. Thank you. Thank you. But again, it's good to get feedback. Also, you can get feedback from each other. Like, what's working for you to see? What messaging's working? Your ICP, what's going well? It's much better to have people get feedback and iterate on these messages than like I think it's very, very aggressive. Okay. But I'm not sure that it's right. I'm not sure. Okay, let me go first. Let's go first. So, should we connect?

[01:56:38 - 01:57:24]
Yeah. Yeah. Okay. So first a bit of context. Tell us the ICP. Yeah, yeah, VP of Sales or VP of Sales or Founders of... Tell me a specific ICP. Who is the CMO going to? Founder or VP of Sales? It depends on the size of a company targeted, but I think it could be VP of Sales for... Okay, VPSL is for AI? For AI, SDR company. How they use the company? What? How they use the company? A week is like several hundred visitors a month.

[01:57:24 - 01:58:11]
Okay, so a hundred visitors a month? Yeah. yeah so here are the like potential prospects for us yeah yeah oh yes there are increase their self-serve revenue by 27% high name we just I wanted not Yeah, it is a company, it's our client. Okay, are they a popular company that other people would know? Yeah, in this industry, yes, it is a YC-backed startup and they have around 3 million.

[01:58:11 - 01:59:02]
I saw AISDR and I was like, oh, you have an AISDR that increases your self-serve revenue and then I was very confused on the messaging. Because I didn't know this person, this company. Yeah, but they know each other. It is a very competitive market and they... Yeah, but there's so many. Yeah, but they know... For sure they know this company because IISDR was the first one to do that. No, they were... The first one was actually some, but they didn't do that for us. Yeah, yeah. I mean, I don't think they're after on that set ever. Okay, so we just renew... everyone you're googling in ASDR, they came up for it. Yeah, but just write for reference, if you're sending someone a message and I don't know who AI SDR is, this message feels very confusing, right?

[01:59:03 - 01:59:49]
I think, yeah. But just as a feedback, if they don't know, this message is very confusing. But it is name, yeah, for sure, but it is name of the company. So, we just interviewed our contract with AI SDR, they piloted our AI demo agent for a quarter to give every inbound visitor an instant demo and get plus 27% in self-serve revenue from the agent plus 11% additional pipeline. And you know what? Their prospects really like the AI demo we boot for them, they usually talk to the agent 8 minutes plus. I thought it might be worth 15 minutes to see if our EI demo agents can be useful for you as well.

[01:59:49 - 02:00:00]
Okay, what do we think? Team feedback. This is team feedback session. Off your phone, please. Pay attention. What do we think about this email? Let's say first what we like about this and

02:00:00 - 02:10:00

[02:00:00 - 02:00:45]
what do we think could be improved by? Crush it, crush it. Dima, you're first. Name I mean, yeah, I don't know the name yet. Just like a comment, a comment. Then I'll say what I think. But first, what do we think team after our sessions, after what we talked about? What do we like? What do we think could be improved? First of all, formatting needs to be better. Yeah, yeah, yeah. I'm trying to understand the context. Why do they care? We just renew our contract. That's what I'm completely missing out on. I don't know why.

[02:00:47 - 02:01:33]
Because you don't know where they are. In their industry, they know where they are maybe. This is a reference logo, I assume, right? Yeah, this is a logo. This is a reference logo. You want to show your reference logo. So it's great to us. What do you mean? Like, you guys are complaining about it. Yeah. But why should we care? Like, you could frame it a different way. Like, you just signed a year long deal with AISDR because we helped them do this. I think it reached as we both then. We just review the contract with AISDR, it means that we sign up for AISDR. Okay, long deal with AISDR. Okay. Yeah, yeah, it was also clear.

[02:01:34 - 02:02:16]
Long deal with AISDR. I would even just go directly to Chase, where it's like, I would make that AISDR, but then Blackstone server set themselves for a very, I don't know if they are violently what is the problem. Maybe too much details, just make it simple. So they did something in the AI demo, water, gear, whatever, and they got this, this, and that. And self-serving from the agent. Just maybe shorter. I think it felt a little long. What else?

[02:02:19 - 02:03:08]
Is that it? It's early thought? We're going to do it kind of quick so we can get through. Prospects. Ah, it's something of why there are prospects like maybe you add what Justina was saying to us, like how was it different? So you gave once a few seconds? I mean, they talk, they usually talk to the agent 8 minutes plus. It's our very often objection that our users don't like it. It's like that. But maybe they don't know that it's normal. 8 minutes plus which is higher than? Higher than what? I don't know. I mean like it means you are talking to the agent

[02:03:09 - 02:03:56]
that's true okay so this is a good example of one that you can like try and test two versions right because you're constantly iterating correct times and trying new things right so for this one okay try that if it resonates with the year-long deal right try to do that increase your self-serve number by 27% I like that as a subject line right like I think that's fine I think you can try flipping some things later, like they piloted or demoed for a quarter, not the takeout, the year long deal, piloted for a quarter. These are the results we saw. Their prospects love it, spent eight minutes more than their prospects usually spent with them. Would love to do the same thing for you. Can we chat, right? And try two versions of the same content, the same message to see what resonates with people, right? Subject line will give you, if it was interesting enough to open, content response, like the response tells you the content's interesting.

[02:03:56 - 02:04:48]
But good, that's a good first version. We're going to go a little quick so we can, because you have more to learn also. Sorry, only through who writes our hands. Julia and then, yeah. It was not too bad. Thank you very much. Thank you very much. And then if other people want to do them, we can do them at office. Yeah. It's your turn. You have three minutes and then you have two minutes. and then very cutting me off because of the collection of that. Okay, tell us your ICP while you're setting up. So my ICP are after sales directors or commercial directors, executives, either of OEMs,

[02:04:48 - 02:05:33]
so original equipment manufacturers of the vehicles, or of distributors, of large distributors original equipment manufacturers. Just to give you an example, I was in Hanover two weeks ago for four days in IAA transportation. It's the largest event trade show of the world for heavy trucks, commercial vehicles and light commercial vehicles. And my ICP are specifically those who work with Asian brands. So what I did, we started first the campaign before the event but now we run the campaign after the event and I'm choosing those for the personalization. So my trigger is that when they post

[02:05:33 - 02:06:19]
something, so this is a typical ICP, so when he posts something about the event and here is his post it should stress the importance of having that after-sales network for growing models in Europe will technicians have the required training this is the signal and then I add them and and at the comment first add them and then write the message. So this is the message. So please. Let's read and then what we like, what we don't like. Two minutes, so fast feedback. It was caught my attention because we are

[02:06:19 - 02:07:06]
We're going to read it faster than you can hear from. Okay. Okay. What do we think? What do we like? You can get through the media. We have first three lines. So just start with, we will at least see a model does something with a specific success rate. I don't need that. Your post-out line. The goal is always 125 to 150 words. I swear by it. They're challenging me. Success rate? You mean the case study? Give the metrics immediately? The models, the success, and the model action. like for instance with BYD we we translate only documentation in one month

[02:07:06 - 02:07:54]
instead of six months for example. I think you could also do like an email like this one with like more wording if you want to put like some more information and then LinkedIn make it shorter. I'm like kind of some of the things in there so try like another version to send some other people that keeps some of your content but shorten it. Exactly, same thing, just shorter. Shorter, yes. Metrics and shorter. Yeah, metrics and shorter. Like very direct. I think it's cool. I mean, add some fun fact like we have to say, like, oh, maybe we didn't only take like six months to launch in the markets and then we got it down to one. Or something they launched faster. I know some of those you were still trying to get like metrics around like how quickly they launched a new market, right? But if you have any interesting metrics or anything that you could talk about for things they care about, that would be good to add.

[02:07:55 - 02:08:39]
I know sometimes when you're early you don't have as many metrics or as many things to talk to you about. If you do, then you can try to add them in. Do you have any? Do you think you have any? Yeah, I have in mind, just not a fun fact, but something human. Because he posted that this is a problem. And what I can say, most of exhibitors I talk to during the AIA still don't have this infrastructure as well. but we can help. Okay, no more like a metric or something. Like 30% of the friends. Yeah, we help them launch in a new market 30% faster. Like that. Okay, so try another version and then also make that one shorter but also try another version that has some number in it that you can tie to. Okay, you have two minutes.

[02:08:41 - 02:09:28]
You don't want to show yours. Okay, then we're gonna go, we have two minutes or you can go get lunch and be ready for lunch. I don't know. Okay. Okay, also you can bring your emails to office hours or send them to me, it doesn't have to be done. I'm happy to talk about the lunch. So this was just done for the first time, but um, so this is, okay, so the ICP here is in Slovakia, Braislava. and a lot of his clients don't have wearables to track so he doesn't have a lot of understanding of how is his client recovered so he cannot really prepare the best that practice for him because he doesn't know how is that

[02:09:28 - 02:09:34]
person doing so I'm sorry okay I mean you guys can read

[02:09:44 - 02:10:00]
please what do you like what do you do What do you don't like? I like to review all my clients' weight and focus entry. Try

02:10:00 - 02:12:08

[02:10:02 - 02:10:20]
like he's for example he's doing all of this stuff with that client but he doesn't have this data point that's what I'm trying to say sure this is for like really his client who doesn't have any variables basically which is a lot

[02:10:28 - 02:11:13]
We have around 2000 scans in our system, so we can use that, it's just a different data So this is a week, basically it's a week If it's a week, I would include it, I would call for something else For me, it's too much because you add not only the goal proposal, can I show you? but also in pilot. Maybe in pilot you can act when you have a call. I would love if you made this way shorter. We help personal trainers like you manage their clients blah blah blah without a wearable. You can track this. We build a personal customized dashboard for them. Super cool.

[02:11:13 - 02:11:39]
and you just simplify the call to action plan. Maybe the pilot is like next step, not now. Okay, thank you. Okay, but good, good. Thank you guys. Okay, great, thank you guys. Okay, I hope this was helpful, interesting. This is something that you will iterate on in your minute change over and over again. I'm happy to help you, each other, you talk to each other about it, like talk to your teams, but best-selling is really important after your business. So I hope it was helpful and I'm happy to look at the English. Yeah?

[02:11:51 - 02:11:54]
Thank you.

Session 2: Be AI-native from day one

Source: GMT20260929-081633_Recording_1920x1080.mp4

Recording duration: 00:47:14. Times below are local to this recording.

00:00:00 - 00:10:00

[00:00:01 - 00:00:28]
I have aie! I do! I do! I do! I do! I do! I do! I do! I do! I do! I do! I do! I do! I do! I do! I do! I do! I do! I do! I do!

[00:00:38 - 00:00:40]
Thank you.

[00:01:05 - 00:01:54]
Guys, please let me introduce our guest speaker from Bank of Georgia, he is a chief officer and he will be talking today about how to be an AI active from day one. and he will have a short presentation and then we can continue the Q&A session. So, whenever you are ready, feel free to introduce yourself and then you can start. Hi everyone. So this is going to be, as Mary mentioned, a short or I'll try to keep it short and it's more like presentation to evoke questions rather than answer them. so you know I hope we're gonna have a discussion after this and that's about

[00:01:54 - 00:02:38]
it yeah I'm sure everybody's trying to be a native right so and I'm gonna try to share my experience Try to share my experience what we've learned at Bank of Georgia about being a native Alright, so first I'm gonna complain So doing a native at a company that's been around for longer than Three decades is not easy, right? As far as banks go, we are young because, you know, Eloits is 300 years old, so nothing to complain there, I guess.

[00:02:40 - 00:03:25]
But still, there's like tens of thousands of processes that have been devised before AI. And there are 9,000 people who cut their teeth before AI and they know how to work before AI. So yeah, that's a problem. And to make it worse, we have a lot of customers. So we're trying to re-generate pain in a supply. One saving grace though is that over 80% of our customers are digitally active at least monthly. And over 80% of that, I don't have a number here but it's 1.6 million, is digitally active daily. So that's a lot of leverage in terms of AI finding their experience.

[00:03:29 - 00:04:17]
In terms of how we're looking at this thinking about making ourselves AI native, there are three stages. Number one is that give everyone an AI co-pilot. The real problem for us, which I guess startups won't have, is that we have to control costs. because 9000 times whatever subscription you have is really expensive. So we've devised some clever ways to avoid that, but I'm going to skip that for now. Second thing is, you know, really go all in on builders. So whoever is actually building stuff, developers, analysts, data scientists, people like that. You know, no holds barred for them. actually we spend a lot of money trying to make them fast and high quality in their work.

[00:04:18 - 00:05:05]
And the third thing, which is the most important thing, is how do we do AI without humans? So how do we devise workflows that don't need humans at all? So if you look at, let's say, a lone underwriting process, what you could do is you could have your underwriters and give them co-pilots and make them faster or you could automate the whole process and make it easy right so that's that's where the prize is at least for us and that's what we're trying to do uh yeah and obviously i'm going to talk about this a bit more uh on the following slides we're doing you know knowledge and skills knowledge and skills are the game i mean many other things but at least from startup standpoint treating knowledge as a product is a really big unlock

[00:05:07 - 00:06:01]
Right, so just to talk a bit about all these three different layers. Number one is that we've devised a cheap way to access LMS for everyone. And cheap is the key word here, cheap and safe. And 63% of all our back office staff uses AI every day, which is huge if you ask me. Obviously technical staff is over 90%, but for everyone it's like two thirds of everybody is using AI daily. This is another problem we have that you guys are blessed not to have. When you're trying to teach a huge organization something, you need a lot of people to do it. So we have a kind of trainer situation where we have around five people who are devising these learning courses and training people, these hundred people, who then train their fellow coworkers.

[00:06:02 - 00:06:50]
in using AI because you cannot just give people tools and go like now be twice faster. And then these people internal built, this is an old figure, over 400 internal assistants for themselves and these assistants are everything from HR Bot which is a bot that tells you stuff about internal procedures to like my favorite which is a sheet counter. It's awesome. So basically in SMEs, one problem you have is that sometimes they bring you in agro business, their sheep birds as collateral, and then you have to, the way they bring it is a huge picture, they have to go like count sheeps, right? So that you understand that you can give them the loan they're asking.

[00:06:50 - 00:07:36]
And you have an automated sheep counter that is really popular with SME bankers because they don't want to count sheep anymore. Yeah, this is a vanity metric. What I want you to say here is that it's really hard to measure how much time you're saving and you probably shouldn't do that. At least with AI assistance, but we try and this is one number that we give usually. Second, development is the big prize. We've had 31% boost in IT throughput since 2025. And we believe this is just a beginning. In data analytics, at least in select parts where we use AI very heavily, we see 2-3 times uplift. And again, this is also just the beginning.

[00:07:36 - 00:08:28]
with it and very interesting thing is that in AI and data analytics when you're delivering your model or analytics product the important thing is how many experiments you can do right because it's very very experimentation based thing business and yeah orders of magnitude more and while being faster and it gives you much higher quality we actually have models in production now that we develop through AI, like a few elements that we develop through AI, that actually give you like seven figures uplift, like millions of Latties extra because they were developed by AI and they're higher quality than we could do it before. And the third thing, this is the real, like where value lives, right? So for example we have a chatbot which is in Georgian, which actually you can talk to in

[00:08:28 - 00:09:17]
Georgia through voice and this is our internal model and that is a cool thing. The chatbot that we have, does anybody here have a Bank of Georgia application by NHS? We have a remote registration, you can actually register and have an account in like five minutes if there's no problem with your anti-money-longry bankbot. And if you log into the Bank of Georgia application there's a chat icon, if you press it a chatbot which will handle three quarters of your inquiries automatically. And this is not Q&A, right? Q&A will handle like 97% I think automatically. This is for example when I want to block my card because that it's been stolen I can just tell chatbot and it's gonna let me choose

[00:09:19 - 00:09:59]
it's gonna let me choose the card and it's gonna block it for me, right? So these kinds of things Second, this is really cool actually, we call it tax to sale. So like hundreds of thousands of people call into our call centers every month. And with a lot of them, not a high percentage, but a lot of them, you can actually identify they have a need for a product. That they haven't identified themselves. So for example, if I call in and I go like, can I have lower FX rates for an exchange? We have packages for that and after a subscription that gives you lower fees.

00:10:00 - 00:20:00

[00:10:00 - 00:10:51]
but an agent might not be able to articulate it right at that it's but the system identifies the intent or like sale opportunity and it kind of pushes that signal into the recommender engine which is another huge AI that we have and it's gonna then push it into our phone campaigns and some it's gonna call you and tell you that hey we have a solo subscription which is an hour after a subscription and you're gonna have lower FX rates if you want to. And this system actually is selling like 1% of all loans and all deposits. Just this little thing, right? It's using wind energy basically. It's not a huge number obviously, but in a saturated market every 1% really counts. And then there's call quality, which is also a really cool thing. So basically I told you we have like hundreds of thousands of

[00:10:53 - 00:11:43]
we have hundreds of agents answering those calls and they're not all like not all of those calls are really high quality. We have actually I think the outrageous high quality like our CSAT is over 90% which is unheard of in banks but still and you have like coaches, quality managers basically who look at 4%-ish of all calls because there's a log and we've built a system that actually monitors all calls and every day when an agent logs into their system they get two pieces of feedback, one call they did really well yesterday and one call they could have done better and why, right? So

maybe you were not empathetic enough, for example, you gave out some incorrect information or incomplete.

[00:11:44 - 00:12:29]
It's really helping them up their game. But this is the third thing, right? This is where you cut out humans from the process and the process becomes instant and well standardized. and all the good things. Alright, what underpins all of this? Let's move into what kind of lessons we have learned. There are a lot of things obviously, but in this presentation I wanted to really zoom in on knowledge. Because knowledge, especially in startups actually, is not well managed, it lives in heads usually. in established companies as well. I'm not happy to say that for us a lot of

[00:12:29 - 00:13:16]
knowledge lives inside heads. But yeah if you treat knowledge as a product in itself and take care of it this is what you get. This is a example from DoorDash. They have a data agent. They call it Pero I think. If you try to do data queries and analytics without the knowledge layer. Even with the best models this is what you get like 48% of queries are actually correct. But when you infuse it with internal knowledge that's the jump you get instantly. And then you can work from here. This is not their final number, their final number is actually 90%

[00:13:16 - 00:14:04]
which is really cool. Now that's already an automated data analysis territory. A lot of juniors and mid-levels cannot hit 90% I think. So, it's great. And what's cool is that they have devised this flywheel where you have stuff that's working, an agent is looking at it and trying to come up with new knowledge, in this case new patterns, new queries, so on and so forth. The human approves it and then the agent becomes better and then the flywheel goes game. And that's I think what everybody should do. Have agents create new knowledge, review it and then commit it again and again. And there's the last slide. The five rules or like five lessons I guess.

[00:14:05 - 00:14:51]
One is a no brainer. Give everyone a co-pilot, obviously like a codex, bug code, whatever. A co-pilot that can see and act on everything that a human can. Second is, we already discussed this, treat knowledge as a product and build a system to accumulate knowledge inside an organization that agents can use. That is, I guess, more a problem for startups than for large companies. It is a problem for companies too, companies with deep pockets.

[00:14:52 - 00:15:38]
We over hire a lot and it's easy to over hire in startups as well especially if you have some money coming in. So yeah, always hire an agent before the next person. So that basically that means that always try to actually let's go into the next one which is designed for full automation. Always think about what can be automated first right and then you then bring in the human. What is happening and it's like very apparent now that you need humans for judgment. That's basically the sweet spot. If you if your humans are just judging AI work That is where you should be. If your humans are doing work by hand, probably not the best place to be.

[00:15:40 - 00:16:25]
And number five, this is my favorite favorite because nobody likes it and if you don't do it you're screwed. Governance. What do I mean by governance? You know proper harnesses, evals, guardrails, monitoring for agents. Why? Because agents are like eager juniors, right? They do everything 24-7, most of it is wrong. So if you let them work on business critical processes, they're going to emerge, right? And a lot of times you're proud of the client. That's not a good thing to have. So I would really kind of emphasize this point that when you're using AI, somebody should be thinking about AI guidelines.

[00:16:26 - 00:17:26]
There's a famous saying, the reason Formula 1 cars have brakes, probably you've heard it, is that they can go faster this way. And the idea is that if you brake when you should brake, you don't explode, you can go faster. That's it. So, anya governance is the way not to explode. Alright, that's about it. I'm going to go into Q&A now. I have a question. When you were bringing the ad tools to the company like the big business, how much of this was teaching agents to use internal tools and then adopt to existing processes versus just changing processes completely and maybe

[00:17:26 - 00:18:11]
removing them from the work that works with humans. No, no, I'm not talking about humans. I'm just imagining like internal HR tools, I don't know, like data warehouses, all the stuff that you have to communicate. And were you more like teaching agents to do the work the same way the humans would do it? Oh yeah, that means it. You would just design a process. Yeah, that's a great question. So for data warehouse specifically, you always teach an agent to work with the existing process because the distinction is that how hard is it to get rid of that process?

[00:18:12 - 00:18:57]
And usually data debt is the worst kind of debt. It's the hardest to get rid of, right? Because of the benefit. So in that case, what you have to do is document everything that's non-negotiable, but then agent works like a human would. But then there are processes like, I described the three of them, for example, chatbot or voice AI, which we're now implementing. You are redesigning the whole process because it's easier. So I guess whatever is easier to do. I'm very curious, a company like this, how do you actually convince the company to go all in on AI and be AI native?

[00:18:58 - 00:19:50]
They are more like a dinosaur company. How is that internal discussion between those senior people when you came in, you know, much more younger driven to like, let's do this, I assume. And how is that, how do you convince them how we make that decision? I'm just very curious on the psychology. Yeah, I don't know. I mean, it seems like Bank of Georgia is a very unique place. I should say that. It's an incumbent bank, huge bank, but still very startup minded. Everybody says that about themselves, but people would actually like that. And one evidence I would bring is that our share price, I joined like four years ago, share price test five folded in that time span. So it's very startup minded, we're always trying new things and that's then reflected in everything.

[00:19:50 - 00:20:00]
So for me it was not a problem, it's actually really the other way around, it's like why aren't we doing more, what do you need to do more? But I think, I don't

00:20:00 - 00:30:00

[00:20:00 - 00:20:47]
know, like, I don't know if anybody's really having that problem right now, because it's so apparent that AI is huge, and I don't think anybody can hide behind a rock. The problem then becomes to manage expectations really well, because, you know, so I remember at an internal meetup, not a meetup, but a town hall, like I was asked to present something, and I presented a rap song about Bank of Georgia written by AI. And that was then translated in everybody's heads that, oh, okay, AI can do finance now, right? And it cannot. So there's a lot of expectation clash there. That's one. And the second thing is like, for some unfortunate reasons, when the zero interest rate era ended a couple of years ago,

[00:20:47 - 00:21:33]
it coincided with the ChatGPT moment and then Opus moment. and a lot of companies found it easier to say that we're letting go like 10,000 people because we have AI now when it really was just finance thing, they couldn't finance it anymore and that made everyone kind of junky that oh they're letting go like 10,000 people, what are we doing? and then explaining that was hard, I think that's the heart of it at least for me Let's see, I assume when you decided on strategy, they were existing requirements like I don't know, security and IT department that you would have to find out how to do that, how detailed technical bills. And in general, how did you just this 100,000 customers that you were thinking about?

[00:21:34 - 00:22:26]
Where you go to support this? Yeah, that's a great question. So, 100 investors there, if you look at them, it was weird to me. I thought it would be all really young, bright-eyed people. But there are a lot of not so young people as well. It's more about who's that 5%, you know, like how there's, with every change, 5% who's really eager, 5% who's not eager, and then the rest is kind of nothing. So how to find that 5%? That was basically it. Funny enough, one of the ways of finding them was just analyzing logs, using AI by themselves, unregulated AI, which was dangerous. And then we just onboarded them to the investors. What, like chat, chat GPT? Yeah, exactly. So when you're opening your work laptop and asking free chat GPT stuff about your work, which is then going to come back in somebody else's chat.

[00:22:29 - 00:23:19]
That sounds like a big problem, safety, privacy. Yeah, since then we really climbed down, we have the first level, the safe AI, that's an internal AI, which is like Intel chat GPT basically. An interface that you can talk to about anything professional, bank related, and it's not going to surface in any training. Do you employ your own models and infrastructure then? We are starting now to deploy smaller ones because it's a very resource hungry thing and those resources are like three years in the backlog. So if I buy 30 B300s right now of 4 racks, it's going to be delivered in 2020.

[00:23:19 - 00:24:10]
So that's the problem, it's not about money. So we deploy smaller ones on-prem, but then there are compliant ways to access the vehicles, which are not going to end up in somebody's training. I have a couple of questions. First was when did Bank of Georgia start adapting AI in this big scale? And how much time did it take to really conclude day one the idea to really use the process of really AI? How much time did it take to fully convert the system to this AI? Even like one use case or like in general? In general, yeah. So, okay, so we are fortunate in a way that we have a really strong AI team like pre-Gen AI, right, classical ML.

[00:24:11 - 00:24:57]
And we know how to deliver value from AI. That's not common, right? So around 80% of our initiatives actually convert to value, which is like 20% is the baseline on the market. And for Gen A it's 5%, right? So we know how to deliver value. But then when Gen A came along, we're really ready. And even then to put into production, like let's say that chatbot system, that's like at least six months. Condensed, right? Everybody working overtime. And then if you want to have like that, like two thirds of the company using AI, that was a, let's say again, six to eight months process of selecting ambassadors, training them, then training everybody else and coming up with use cases and sharing those use cases. so that everybody has ideas.

[00:24:57 - 00:25:43]
So on and so forth. It's fast. Yeah, yeah, yeah, the forest is really fast. I have friends all over the place and for example I was talking to a friend in JP Morgan a couple weeks back and I was telling her all this and she was telling me that in the three years they're now happy to have deployed a RAG system that when you ask it a question, it surfaces like relevant Q&A, pre-written answer. So really big banks have a lot of problems. I think one of the main things is how agile your control functions are. It's compliance, legal, operation risks, information security, how they're actually willing to work with you.

[00:25:44 - 00:26:30]
We're very fortunate that all of these control functions are awesome. fast with us. I think the problem with JP, at least that country, is that control functions are slow and they don't care. They're like, you know, if we're going to use AI in a not 100% secure way, it's better not to use it at all. And if you have that mindset, you're done. There's no way to use AI 100% securely. 1995 maybe? So the culture of the company of the bank was everybody was like over-minded. So yeah, this is a new thing but less adulting because we see the potential. Definitely. To be honest, one of our best customers, like internal customers, is legal.

[00:26:31 - 00:26:44]
Like legal is like absolutely berserk about using AI. And they're using it in a really good way as well. So then they're really willing to work with us and find good ways to secure this thing and have it working.

[00:26:54 - 00:27:43]
software development companies teams how companies such as start or include full autonomous software your agents make some tasks and when do you need to work If something works, who owns the problem? Who is that engine or who reviews it? There are two approaches inside the company about that. For us, for analytics and AI, we like to have, we call it AI Factory or Agent Factory.

[00:27:43 - 00:28:28]
It's a complex system of 15-ish agents that you give a huge task to and then you guide them all the way. And then that way you're responsible for it. And it gives you leverage over which way the agent develops. Then there's another philosophy which is I want my AI employee, we call it another system, to read a Jira ticket and then give me a PR. and then everything else should be automatic inside. And that system is operational right now also. It handles relatively small chunk of everything now, but it handles a mundane task that nobody wants to touch. So that's good.

[00:28:30 - 00:29:16]
And there I think both the owner and the reviewer share as well. And one more question. The change of new developers through your process, should they know the BI instruments or you teach as a teacher? That is a really good question. I don't have an answer to that. I don't think anybody does. Maybe some people do and they're not telling us. So the problem is the problem is of a career path, right? What does it mean to be a junior today? Because a junior can really pass for a senior. And that is a big problem. And another big problem is why do we hire juniors to begin with?

[00:29:16 - 00:29:59]
And I think we're going to have an answer to that. I have faith in it. But I don't know how this career path is going to change. One thing we require everyone, we have this, you know, we have this individual development plan for everyone where you have this all these what you call it criteria of advancing from one level to another we've just introduced this ai set of criteria and they say like even for mid-level or like junior as well but mid-level you have to fully be able to reproduce theoretically at least your work right and the problem another But the problem is people don't read what they use and send it to you. And for that we have a lot

00:30:00 - 00:40:00

[00:30:00 - 00:30:43]
of really really harsh measures but you have to at least read it and at the most which is our standard have to be able to reproduce it right if i ask you to that's the best we have right now it's not good that's the best i don't know did you do you have ideas on it have you found any solutions I think you should find something mental, but we can still research. Yeah, that's a huge problem. It's like when they introduced these sewing machines, right? What's a junior now? We're going to find it, we will find it I guess, but it's going to take some time.

[00:30:47 - 00:31:22]
What kind of networks do you use? Is it a common source or enterprise? Yeah, so Claude is a really big partner for us. So from these ones like Claude OpenAI, Brock, the Western closed labs, I think we're most to partner with Cloud. AWS is a huge partner in this as well and we are also trying to diversify with open waypoints. That's the, that is the, yeah and some open source like

[00:31:35 - 00:32:12]
So the AI assistance is the first step. That's an internal chat platform basically. And the second step is the cloud code. So we have this nice setup where you have on-demand cost for people who don't use AI that much so that they don't expend subscription and if they spend so much in there that okay now it's more economical to buy them subscription then we buy them subscription. It's kind of a cost control mechanism.

[00:32:22 - 00:33:06]
First of all, how do you find the right balance? Like, oh, very agile but we're not going to have at least 5% of the clients in the client. And if you have disaster storage, how do you deal with them or how do you deal with them? Unfortunately, no disaster storage so far. One was an agent sent a kind of random email to someone inside the company, not outside. So that was as close as it were to disaster, which is nothing I guess. But balance is by a lot of fight. You know, control functions and first and second lines, we sit down and kind of fight it out. They have their minimum requirements that they're going to step back on. And then, you know, we try to find a solution in there and usually we do.

[00:33:09 - 00:33:57]
I don't know if this is public number or something, but what is the monthly cost for all of the systems? Eleven. That's all I can say. On AI. We try to be frugal because profitability is very important for us. I don't know if you're familiar with the banking profitability figures, but one big thing is cost to income, do you spend to earn one dollar and usually is like 50-60% for incumbents we have it 27. We're like twice as effective as log-vents and that comes from being really frugal. So we try to be really frugal for this and the set of high described above the steps is that as well but it's still millions and it's going to explode into tens of millions

[00:33:57 - 00:34:48]
at a point. I'm very curious, you said we have the loop right for agent, said something that there And that loop ends with a human touch to make sure the system gets better, right? How do you make sure, how do you value that human touch if it's like correct or incorrect? How is there a system in place to make sure... That is a good question even though it doesn't fuck up the system. Yeah, yeah, yeah, that makes sense. There is like... The analogy I find useful in these discussions and I found it useful about all of the discussions almost about AI, right? Which is you can view AI as a very eager junior, right? I have said that way. And you design the systems around it just as you would design it around a very eager

[00:34:48 - 00:35:35]
junior. So what do you do with a very eager junior if they produce some kind of code? Senior reviews it, right? That's it. Now for critical systems, you have these two sets of eyeballs. I don't know how you say it in English. So somebody

else should also review it. That seniors work. But for like 90% of the work, the senior is enough. Yeah, he also messes up sometimes too, right? But that's OK. That's how it works. And you can think about AI in exactly the same terms. And you will slot into the existing security processes just like that. How big is your internal engineering team that's for what the tools are doing for internal AI use?

[00:35:40 - 00:36:30]
So we're like we're 70 people who actually do AI, so like data scientists, analysts, engineers, so on. There are some little, not little, but you know, some internal platforms that are built so for example the chat platform people and we're in the process of putting down platforms for like huge scale AI governance and I don't know how many people that's going to take to be honest. It's probably also going to be a decision which is like whether build or buy. So yeah I don't have an answer to that. Just a very interesting question. How many tickets or if you know how many jet tickets are created daily? That's a good question. I don't have a number off the top of my head but let's say several thousand people use it daily.

[00:36:31 - 00:37:18]
Three, four thousand and like let's say ten messages per day per person and you're going to get that. If there is a right decision, next step, building the government, governments around the platform, how do you decide to need SPI and do you have innovation team that is working with external enterprises or startups? So the most important thing is to understand what we want, which is not easy. And once we have that, and they're very specific, we have that right now. There's like, I think, 50-ish criteria, what we want out of the system.

[00:37:18 - 00:38:07]
So it should, for example, be able to have an AI gateway that controls costs and access. Like, email system, labeling, data, data, card, drill, so and so on. So that's like 50-ish criteria. And then we're in the process right now of talking to a lot of vendors and then we just devolue them based on that criteria. That's I guess the substitute of the innovation team that you were talking about. Can you give a couple of links like which vendors are very welcome. There are a lot. Let me try to remember. So one is Wonderful AI, which is a startup actually. and they've gone from zero to like five million valuation in like a year and a half I think. There's NA10 which is not a great vendor in terms of

[00:38:09 - 00:38:53]
maturity. There's DataIQ. There are Chinese vendors that are not pretty good here unfortunately. How do you find that? We're like asking AI. Me too. I mean, I have AI for it now. No, I mean, me personally, that's been like on a personal note. That's been such a joy, to be honest. So I went from making things by hand to directing a team that makes things by hand and making things by hand a bit, to directing a team that makes things by hand. directing people, I basically just sit on meetings and tell people what to do or they tell me what to do.

[00:38:54 - 00:39:18]
And now I can also be a person who also makes things. And that full circle has been very interesting. I think there's going to be a lot of people, senior people, who are going to go back to making things. Because I think everybody starts out by just wanting to make things. And then at one point you wake up and all you do is just listen to things, right?

[00:39:26 - 00:39:59]
How do you manage costs of security because of new models such as Fable etc. are starting on the market and a lot of people who don't know well and who are talking before can try and hire one system, companies etc. How do you increase cost of security and part of security in your system because of new

00:40:00 - 00:47:14

[00:40:00 - 00:40:49]
agents and... Do you mean how we secure new agents? Yeah, agents and the cost of security in England because of a lot of people can try to hack banks. Right. I think we have a really good informational security team. At least I learned from time to time how big attacks were afforded. That's about outside. But internally how we secure AI agents, there's a... It's not that different from classical AI. It is a lot different but fundamentally it's the same. You have to have good guardrails, evaluation systems, monitoring systems, alerting and yeah I guess that's about it in terms of securing it so

[00:40:51 - 00:41:40]
Yeah, obviously accesses, right? It has to have the minimal set of accesses that it needs, and it has to be the least complex system in terms of the agent itself that can be. And it makes it easier. Not very easy, but much easier than just chaos. There are basically every week there's a new model that comes up from OpenAI. I mean, these companies, we have a system for testing, or somebody is testing this model. So we have a very first world problem in the world right now in terms of this AI. And the interesting thing is that when these models come up they're usually optimized for something. For example the latest Opus 5.5, this is the nice presentation, I'm sure a lot of people

[00:41:40 - 00:42:28]
noticed. It can do this, right? But on let's say legal work it's not much better than Opus 5 or maybe even worse. right so the solution for that is to have domain level evals right so which is for legal I'm gonna have like 50 standard things that I am doing right and then I'm gonna automatically test the new models on that and somebody's gonna review it score it and there you go now you have a way to understand which models are for you and which you can skip So if you think about your work, there are maybe 15 things that you do that are 90% of your work. And for those 15 things you can come up with like 5 little exercises each,

[00:42:28 - 00:43:16]
which is going to give you like 50-ish, 70-ish tests in general, EDOPS we call it. And then you will once a new model is out you will have it run through it and then you're gonna review it. You know in some cases if you do it right another or like the same element can also review its work if it's like specific enough. Anyway so once that review is done then you know how good this model is and what did it improve upon compared to previous model and what it kind of regressed on. Because there's a lot of regression to be honest. Like nobody's talking about that but there's a lot of regression. Some of the older models for some niche work are better. So that ideal way I think would be for everybody,

[00:43:16 - 00:44:02]
like every employee to have their own set of evals that they're going to update regularly. Again, what does a human do in this new setup? You step back and one good analogy that I heard from somebody at AWS Exxon, he was saying if you look at people who do glass bottles, like blow up glass bottles, they control everything about the process. But if you have a factory of glass bottle making, then you control the machines that do the glass bottles. So that's what you should be doing and having evals is part of that. But in the full process of implementing AI, were there any things that happened that sometimes big startups, for example,

[00:44:02 - 00:44:47]
that was like some big challenges or big problems in this whole system that happened? I already said that we unfortunately haven't had a security fuck up at all but in adoption I don't know how relevant that would be for a startup to be honest but adoption is a we learned a lot of things about adoption right so who to select what kind of like how to so people who you're teaching AI too they know their domain and you know AI and how to actually work together to knowledge with them, how to use AI in their special circumstances, that is like an art in itself. And that's what we learned and there was a lot of backups there.

[00:44:48 - 00:45:19]
I think the biggest one on two years is that a lot of companies are going to have is not going big enough with AI because it takes a lot of one competence, two willing and three coordination to pull off a large AI transformation. And I think that's it. Barring security, the biggest thing is not doing it quickly enough and in enough coordinated fashion. So for example, shadow AI, which is like everybody's using their own AI. That shouldn't be happening.

[00:45:30 - 00:46:19]
I spent three minutes on it. You won't spend like one hour. I'll actually give you a backstory here. So this was gonna be a fireside chat because I seriously don't have any time to make a presentation. But Nino was pushing me on it. So what I did is what any good manager would do. I went and pushed my AI on it. And so basically the idea is that by now it has enough context to think about what would be from our work interesting for startups, come up with a presentation, then make it into a very beautiful form and then just present it to me. and I've probably spent like two hours max on this, right? That's it.

[00:46:19 - 00:46:44]
I've spent, I guess, two hours as well, but in human terms it's like a month. And that's it. So that's a really good example. That was all the stuff I... You should see the other things. I don't know if you know the kind of meme flying

around is you should just tell it wow me and then it actually woes you. and this was the samest presentation the other ones were like insane.

[00:46:54 - 00:46:58]
Alright, if there are no other questions, I think we have over time. Thank you.

[00:47:12 - 00:47:13]
Thank you.

Session 3: Discovery calls and practice

Source: GMT20260929-091749_Recording_1920x1080.mp4

Recording duration: 01:44:31. Times below are local to this recording.

00:00:00 - 00:10:00

[00:00:08 - 00:00:57]
Where is everyone? Everyone needs to do discovery calls better. Okay, this afternoon we're getting discovery calls, completely different. This session is a little shorter because I want our focus on this one to be practicing and actually trying to do discovery calls. Because it's one thing to have all the questions you want to ask and things you want to find out, and it's another thing to actually have that other conversation with someone. Right? So we're going to go through the sessions, we'll go through questions, you'll have a little bit of time to put together an outline, or add to the outline that you already have for discovery calls and then we'll get some volunteers up here and we'll do some discovery calls. Yes? And then you can all at the same time listen or you can practice with each other discovery calls as well.

[00:00:57 - 00:01:42]
Whatever you feel like doing. Sound like a plan? Yes? Who feels good about the discovery calls already? I don't. Okay. Half and half. Okay. You don't yet. because i've never done like you know the piece of these like completely you know it's not um yeah just talking about it but it's good yeah yeah okay perfect no i think it's good because again it's one thing to know how to do them and it's another thing to be able to do them well and to know what to say next or people will answer questions how to ask it in a different way yeah um okay again same for these sessions can you put computers away or drop five and pay attention for this will be probably 30 minutes and then we're going to go do things so it's much shorter than this afternoon. So first thing right a survey call is a qualification call right

[00:01:43 - 00:02:30]
it's you're meeting the prospect you are asking them questions to see if they're a good fit and they're going to ask you some questions to see if you're a good fit right you're jointly deciding does this make sense to spend any more time together and to move forward yes or no right and either yes if you're like qualified you you are a good fit or no you're not really a good fit here's some other resources here's some other things like let's not waste each other's time And that's usually harder to do is for people to disqualify them and to send them nicely on their way to say like actually you're not our customer for right now. Appreciate our talk. It was lovely. Let's like here's what you can do instead going forward. And we'll talk about how to say that nicely or how to do that nicely going forward. Sorry, I don't mind. Your discovery call goals, right? Your goals are in the discovery call. You should understand their current state.

[00:02:30 - 00:03:17]
What are they doing now? What have they tried? What are they doing? What are the plans? current state of their business of the problem of the pain point that they're solving if you don't understand their current state you can't talk to them about how you can help them right not just what is the one problem you're having what are the things that go around that problem you're having have you tried to run the things before have you not are you trying a lot of other products what are you doing right um you need to understand where everything is and start understand their priorities of where things are going to be right we want to service get an impact right what is this how painful is this for you what does it mean if you aren't able to do X what does that mean does that affect your revenue does it impact your team does it impact your metrics does it impact what you can do for the next quarter does it impact your goals for the next year right your goal is to

[00:03:17 - 00:04:03]
understand the pain of what they're feeling and quantify it right and to say because you can't do this you're not able to do Y right or like alternatively right the other way you can say if you could do this right what impact does that more people, right? Can you hire that VP of ops that you want to hire, right? If you're able to get to this revenue number, what does this mean for you and how can we talk about it in a way that I can quantify the impact so we can talk in the same language, right? Talk and have the same conversation. We want to test urgency, right? We want to see how urgent other problems is for them and see how quickly they want to solve it, right? We're identifying if this is a big pain point right now that they want to solve again in this week. Do they want to solve it in the sleep? Do they want to solve it in a quarter?

[00:04:04 - 00:04:50]
Do they sometime want to solve it over the next year? Is it actually the non-fiber problem that they don't want to solve it anytime soon? If you don't understand the urgency, it's going to be hard for you to move the deal forward. If you can't tie to something that they care about internally, if you can't tie to any goals, if you can't tie to something that they want to do, then you're just flying by trying to figure out where you can fit in. And you're trying to convince them that your product is so awesome, which is not what people buy. You're understanding the buying process, which we talked a lot about yesterday, and you're deciding whether or not to advance, right, to go to the next step. You're jointly deciding to go to the next step together, right? Your goal at the end of every interaction with the customer should be what is our next step and what are we doing on together, right? You should never end any call, any meeting with like, okay, we'll be in touch with the good stuff, so we'll be in touch with the good stuff internally.

[00:04:50 - 00:05:35]
No, right? You have your next meeting plan, you have your next interaction, your next thing, because you're not going to be able to move things forward if you don't have that. Right? Right. Definitely yes. Okay, so here we are back to our lovely funnel, to our leave qualification. We're thinking about our SQLs. What's the number in the laundry that sales people fail with Hidrick Corp? Why did you do this? That's the discovery. What does that mean though? What's the impact of that discovery? You spend too much time on the wrong people and wrong activities and not enough time on the right people. Right? Because you only have so much time a day, you only have so much follow ups you can do, you only have so many follow ups, right?

[00:05:36 - 00:06:21]
And you're spending time on people that aren't going to close anytime soon, that are wasting your time, right? Because they're just exploring, want to ask more, want to see what you're doing, want to see what feedback you have, right? then you're not moving and driving towards like your goal right just to bring a number of customers to drive around you. So that's what we want to focus on and think about right. So we're thinking about this, we're going back to BANT. It doesn't matter to me the order that you ask these questions right. BANT is a good way, like it's a very common way to think about it, especially when you're first starting to do your discovery calls. To think about each of them to be like okay did I cover the budget, did I cover the authority, did I cover the need, did I cover the timing. Some people like to do it in a different order, right? Some people do it this way, right? And find out the authority first,

[00:06:21 - 00:07:07]
because that's the first thing they want to do to figure out if you're speaking to the right person. Then they do need, then they do urgency, and then do they have a budget for it, right? Again, it doesn't matter to me what order you're in, right? It just is whatever order feels more comfortable for you to talk about these conversations, for how the conversation goes. So you should make sure that you are hitting all of these in your discovery call, right? yes yes yep it applies to all of them every first conversation you have you're like do you have the money are you the right person do you have this problem and when do you want to solve it right exactly all of the things right but you're gonna ask the next week you're gonna ask very nicely so it's a conversation so you're having nice back and forth right so they talk a lot more um but

[00:07:07 - 00:07:53]
you want to find these things out right if you don't find these things out you should not move have a demo, right? If you don't find any of these answers, then again, you're going into your demo then and you're being like, is this a good use of our time? I don't know. What problem do you want to solve? I don't know. Do you have a budget? I don't know. And you're just going in your demo and you're like, here's stuff. Do you want to buy it? No, we don't want to do that, right? We want to go in knowing and understanding how you fit in, right? How you fit into the problem, what the pain points that you want to solve. We'll talk about demos on Thursday, right? And what that should look like. But like based on this call this conversation that you have you should understand all these things and then you tailor your demo to the things that they want to solve right and then you tie in and then all your conversations from all around i know you're trying to get these kpis solving this is going to allow

[00:07:53 - 00:08:36]
you to hire two more people to be able to do this so you're able to do that right you said you want to solve this by the end of the quarter right you said it i'm warning for you right for most software right if we take a month to onboard we start getting started your sales cycle is two months we do cut at the end of the year but we'd have to start in the next week or two right and then you're framing the urgency in a way different way right because you're aligning with what they want to solve or do how do you understand the body of the over writing before you go on in a demo Do you only

have one call or do you have a discovery in the demo?

[00:08:38 - 00:09:27]
How do you have one call? It's very hard to get people to respond to things over email, right? Because you're not having a conversation. If someone asks you and is like, how much money do you have to spend on this problem? Are you the right person? Right? You're not going to get answers to any of those things in email, right? So it's very hard to do that. You can, some people can do a discovery and a demo on one call, but you have to still get the answers to these questions and then be able to think about all of them and think about how you're in a position and show the demo to align with the answers to these questions. Right? If you practice a lot, you can do it. Right? If you've done it often and you're a really good salesperson, you can do it. Most salespeople prefer to have time to prepare the demo to think about like what they want to show, the order they want to show it in based on the conversation.

[00:09:28 - 00:09:59]
that it's much harder to think about these questions, think about getting the answers, think about putting the answers in a context that they can then use to frame the demo for it to make sense for the person. You can do it, it's just much harder. Right? Does that accept? So when we're going through, here's like a structure I want you to think about, and we'll go through questions for each, and things you can think about for each, right? At the beginning of your discovery call, right, we're framing an agree, right? We're talking about credentials like your background, like who

00:10:00 - 00:20:00

[00:10:00 - 00:10:45]
are for the meeting like a quick like sentence about the company right agreeing on why you're here confirming the agenda time right confirming like here's what we're going to talk about for this time because a lot of people especially when you haven't done sales before or you haven't done it regularly or often right but then the customer has or they're more confident and know what they want they will steamroll you and they will ask you all the questions and they will guide the conversation right When we practice it, someone will do it and I will single them. Because it's really easy to turn around the conversation, right? If I know that you're inexperienced and you don't know, I'm just going to push through and ask all the questions I want because you're not going to be able to push back at all. And customers will do that, right? And so you want to take ownership of the conversation and say, here's what we're going to talk about with the agenda.

[00:10:45 - 00:11:31]
What else can we add to it? Is there anything else? Here's what we're going to cover. Do we still have 30 minutes, right? Because also sometimes people will go answer, ask them questions like, oh, I have to go actually early. I said, yeah, we didn't even get to there because I didn't confirm that we actually had this time we committed to. Just because they agreed to the time on the calendar invite does not mean that they'll stay for the whole time. So we're agreeing on those. And then you confirm the outcome. Like, okay, so for this call today, you're interested in doing this. I'm going to learn to see if we're going to fit together. If we agree at the end of this conversation, then it makes sense to move forward. Like what we usually do is a custom demo and we walk through with that ability. Does that make sense? Does that sound good for our plan today? Right? I mean the same thing. Current state mapping, this is you figuring out what they're doing.

[00:11:31 - 00:12:24]
What tools are they using? What people are involved? What good looks like, right? If they're like, oh, we really need to improve our product process. We need to improve how we launch new features, how we launch new products. And you're like, what does that mean? What does it need to improve looks like? Well, part of it is not good, right? You want them to talk more, to explain more, to tell you more about what is not good and what they want to improve that's better, right? don't just take if someone says like oh this could be better how could it be better like tell me about what that would look like right because it gives you more context and more that you can align with um problem tends to impact right again anytime they say something that they need to approve something or work on something like you want to tie to something tangible right is it the time of the team is it how fast they're able to launch things is it how fast they're able to build things is it revenue for their team

[00:12:24 - 00:13:10]
Is it like onboarding for customers? Whatever it is, you want to tie to something very tangible. And think about what they're already tracking, what they're doing, and how you can align with those. Constraints and timeline, right? This is

you understanding how you're fitting in, right? Whether it's what the budget is, who's evaluating, what the other stakeholders are, right? We talked about identifying other stakeholders, about dates, any deal breakers, right? If they tried another product, if they tried something they went badly, why did it go badly? Right? So you can know to avoid those same things. And then if it tests the next steps, right? So next steps, like, okay, it sounds like we can solve the problem you have, right? You want to do this in the next two months. You have this problem. We fix it for other customers similar to you.

[00:13:10 - 00:13:56]
This is how we did it. Our next step is usually doing a custom demo. I'll walk you through what that would look like for your team, what the onboarding looks like. people that can be involved like usually bring vp event or video sales to go on and be on this demo as well so that's not like something to do right because you're talking nonsense who's already doing all of these things in their demo and they're just gallery a couple things a couple things okay good good i mean you have to start somewhere and then add some more right okay so we're thinking about questions right you are not asking all of these questions i have a bunch of examples of questions how you like to ask things, how you have conversations with people, and how that person comes in and what energy they come in with.

[00:13:57 - 00:14:42]
Some people are very direct. If they buy a lot of things and they work with a lot of vendors, they're going to be like, listen, we have 50K for this quarter, here's what we need to do, here's our problem, can you fix it or not? And they're very, very direct. Because they're like, I literally don't want to waste time, I know you're going to give me all the things, I'll tell you whatever, this is what we have, can you fix it with this budget and this timeline? right? Not everyone will be like that. Some people, right, you're determining where they are in the buying cycle, well, like, right, like, where they're at, we're thinking about some of our authority, right? We're thinking about, like, you're asking questions to find out information so you can determine where their authority is in the company. You're not saying, are you the decision maker? You're saying, can you tell me a little bit about your role in the company? Because they're going to tell you about their responsibilities and who they manage and what they do,

[00:14:42 - 00:15:31]
and that's maybe more context for the role right you're asking them tell me about the organization structure how are virtually typically made in your company right when you bought something similar to us before how did it go right what was it like and they're like well we've never done anything like this before this is our first time you're like this is going to take a while because you don't know how it goes we have to figure it out together so that's going to be longer right if they're like oh last thing about like um went through our team we had like a internal meeting and then went to finance and then we signed it and I think it took a lot of time. Right? You're like, okay, that's good contact for me to know. Right? Because you are gathering information and understanding. Right? This is for you to understand. Um, should I help be involved? Right? Be like, oh, it sounds like from your role you usually make these decisions together with the VP of marketing and you do this together and like, would it make sense to bring

[00:15:31 - 00:16:21]
them in our next call? Right? Since you make these decisions together, right? You're framing, is like framing and understanding the authority. Yes? One other thing, like the last one here, can you think of any reason why they'd be opposed? If they have someone else that they bring up that's like a counter or someone else that's usually involved in decisions, like preemptively asking before they bring them on the call, like, is there any reason they'd be opposed with something like this, like internally, are there other things you're using, or if you've tried to implement something else before, is there going to be pushback from them on anything, right? you meet any other stakeholders it's helpful for you to understand if there's any like hinders any landmines or any objections that you can already think about how you will talk about that before someone comes on right because that's usually the hardest problem is you run into someone

[00:16:21 - 00:17:06]
and they ask you a ridiculous question that you're like i literally have not thought about that before like no one's asked me that before i haven't thought about it and you're on the spot and it's usually hard to think of things on the spot right but if you practice then you're like They always object to a long onboarding time. If it's longer than a two day onboarding, they don't want to do it anymore. OK? Let me think about 100% because our onboarding is more than two days. But let me think about 100% or how to structure it. Why? Why do they not want to do onboarding that's longer than two days? If I can show them the value or how we do the steps or if we get to a certain point, do you think that's something they'd be open to or do we need to have onboarding in two days? Because you are uncovering and

understanding and trying to figure out stakeholders and thinking about where people identify themselves and ignore. Yes? Okay.

[00:17:08 - 00:17:54]
Yes, everyone is very quiet today. Are we just like very excited on my questions? I was writing down what I need to ask you so... Okay, did I not pause long enough? No, it's like a different comment. It's like a visual conversation. I just didn't want to like miss it. Okay, no, no problem. Do you have any comments or things yet so far? You guys are quiet today, usually. Yeah. So you get a press on it. Yeah. It's because we are very amateur on this field. How do you discover code without having a demo? You call someone? Like, okay, I call... Like a cold call? Sorry, I think it's the biggest fault of the sales industry. You book a demo and you get on the discovery code.

[00:17:56 - 00:18:43]
Some companies say Boca Demo, right? And they do this every time. Yeah. Not every company says Boca Demo. A lot of startup founders say Boca Demo, because they don't know. But larger companies, they book a call with our team, book a consultation, book a something else. Start small startups, say Boca Demo, and then give you . For example, we send a email to some . OK, and . And you want to give that book. How can you make this cover without solving the problem? Well, that, so, sorry, I'm getting it. So they want to talk to you. And you're like, yeah. I said, yeah. Okay, perfect. Let's put it on. Yeah. Great. And you're like, perfect. And then you set the agenda. You say, great. For this call, I want to make sure I understand your pain points, your problems.

[00:18:43 - 00:19:28]
I have some questions to ask for you, right? Usually people find it more valuable if you go through this first, and I understand all your pain points and then what we do is have a second meeting where I have a custom demo that I show you what that looks like implemented for your pain points. If not, you have a thousand features and a thousand things. We don't have time in this 30 minutes to show you everything. The many, many features thing, right? Yeah. You can say many features. You can say like, usually people see more value when I build a custom thing. Everyone is very different. Like at your scale, you usually benefit from seeing something more specific, right? But in this way, this probably happens so many things. Like you say before we come to the goal, to understand that your case, I would like to ask you what you want to say. But they go. You can try.

[00:19:29 - 00:19:59]
So they go to the . They don't know to talk about the point. A lot of people like to talk about themselves, and they like talk about their problems. So how many ? like people who like to talk about them all the time. I guess it's very wrong how I run those sports. Oh, I know, but yeah. They are like, okay, what can you offer to us?

00:20:00 - 00:30:00

[00:20:00 - 00:20:48]
And then you have to sell the product when you have to sell something. Do you only have one problem for the buy? So far, yes. Okay. So did you manage your expectation that these schools are not used to sell something? So, just really understand what are your big points and then how the product can be used to sell them. Do they buy them some? Well, no, sir. So if you're not buying the call, right, it is not as transactional as you think it is, right? But you maybe don't have to have both, right? If you can have a demo that you're like for bars who show them this, for hairstylists who show them this, for these people who show them this, you understand and ask them questions at the beginning to still understand and see the value, and then can show them like a demo of something that is like relevant to their product, like,

[00:20:48 - 00:21:36]
or to what they care about, to the problems that they have, like you can do that, right, in one call. because you're a little bit more transactional. But you can also write for some of those larger ones. If you have McDonald's, I would absolutely not show McDonald's demo in the first call. Absolutely not. If it's American, go ahead. I can believe that, like, for the discovery one, you just invite one or two people. And for the demo, we'll ask them that now we understand the look. So like, within the demo, it will be a big thing. This is what we need. So invite as many people as you can. that just seems to be best. So what could we do with both, as I said, we start the call, we have to start the document first, and then before we collect, you know, for everything you said, this is why I brought

[00:21:36 - 00:22:23]
a consult, and then you showed a couple of things in the general. In any case, it's quite a bit right. I'm pretty sure the

way we do it is wrong. So, we come in the call, you might have asked all of those questions before, which we don't do that very good knowledge. They open up, they talk about, even then they say, okay, how can you help us? And then you either, like, you describe the solution but you don't show it, and you try to push to the next call. It depends on like where you're at, right? Like if it's a hairstylist, right? And you're like, you have two locations and you're like that I wouldn't spend time with

[00:22:23 - 00:23:08]
a second call, right? If you have like the hairstylist, like I know what you care about me to do. I ask you the questions. I understand. I'm going to show you like you care about these specific people. Let me show you how easy it is to get profiles that fit exactly what you're looking for, right? You can go through an interview and vet them and this is what it looks like. Here's what it is. like and then for next steps you should be like can we set you up now like you shouldn't be getting set up now because that is very transactional right that is a very small use case smaller ICP right that is a transactional ICP let's say about ICP like this like my company is the budget for example how can you make it on the second call how can you convince them to ask them to get in the second call

[00:23:18 - 00:24:03]
I know what they expect from other goals. What will it go from us? Yes. Okay. So the framing in the beginning, right? How I was talking about framing the call. So like this call is for me to understand what you're trying to solve. Right? I'm like, this is not for you to know the product to show you things because like you as a I want to make sure that we can align with them, that I understand what you're trying to solve and that we can do it. What we usually do with companies like you is we have this call, I understand your needs, I tell you a little bit about our company and how we help people. And then I do set up a second call and I do a demo of what this would look like for your team, what results could be, and you invite other people from your team that would be a good fit for them to see as well. Does that sound like a joke? So you can set the expectation before we go over.

[00:24:03 - 00:24:50]
Yeah, it's all about framing, right? If they go in with the expectation and answer all these questions and you haven't said anything and then they're like, now what? That is very different, right? But if the expectation is beginning, if you're like, here's the agenda, here's what we're going to talk about, here's what we usually do, and here's why, right? You're framing and positioning it in a way so it's like, this is our club, right? Does that make sense? Yes. I don't know, maybe this will sound stupid but I'm thinking on, I didn't do a lot of B2B sales yet but I've done B2B sales last year. I would say that's like B2B. Sometimes I feel like it's a bit of balance because sometimes I know that this goal will be for a relationship.

[00:24:50 - 00:25:36]
getting to know each other, soft metrics, soft conversations. And that's psychological. Versus today we meet, today we meet this. I think that it has to be some kind of balance. How do we communicate to these types of people? Because I know that sometimes pushing on to like today we meet this. Sometimes maybe that investor just wants to get to know me more. Yeah. It also depends on like the person and right? Like sometimes we talk to people and you're like, oh, you are a small talker. And I'm like, I'm a small talker. Right? I'm like, okay. Oh, it looks lovely by you. What have you been doing? Oh, it's so nice. I've been there too. It's great. Right? And you like come along. Okay. Okay. Let's get to our agenda.

[00:25:36 - 00:26:21]
Because we're taking it off for today. But it's about how you present it in the day. Right? like you become like the counterpart of whoever is on the call with you right and then you have to kind of like mold yourself into like how they are going to interact with other things and sometimes it might be more like redirecting and training you have to be very structured because otherwise it's going to ask you 5,000 questions and it's a team of you won't be able to ask anything but sometimes right they'll be like your class and be like okay yeah I want to do this let's just chat more complicated and just like talk through some ideas and some things right you're gonna get a ton of different people but you have to become whoever they need you to be in that like moment right

[00:26:23 - 00:27:11]
which is hard but you'll i think you'll get a sense like when you've had a lot of calls some of you have had a lot of calls and some of you have maybe not had somebody so far but you'll get a sense when you get on a call of if they are like a very direct wanting it down to business immediately daily person or a person who wants some warm-up, wants to chat a little bit, do some things first, right? And it's very, sometimes it's IPP dependent, sometimes it's regionally dependent, right? Sometimes it's the time of the day dependent, right? Yeah? On this people, what usually I've seen

that they need to be connected with you, not the product first. So like if you are somehow connected with you, at least one or two person, then you have a much higher chance.

[00:27:11 - 00:28:00]
The pain point is important somehow, but it's much more important than the B2B level. If they buy you, then they will buy the product. That's easy. The pain point they will find. That's not the problem. Yeah, it is important, right, to be personable, to be a little bit charismatic, to understand where they are, where they're going from. it depends on the person right if you're selling to like a very if you're selling to an engineering team or a level of team they're usually not as um they are friendly but they're not um talking about so many of the things beforehand right because they're they're like here's what we're trying to do can you show us something or no how is this going to help us yes or no and then i'm gonna go back and do something else right so it depends on your icp right type of person but like your

[00:28:01 - 00:28:50]
prepare and practice with all sorts of people, right? Like some of the other reps have literally gone out into Tbilisi and like talk to random people and talk to random business owners because they're like, we just need to talk to different types of people to get different reactions, to get like feedback on how we're talking about things, how we're asking questions, because like, it is a lot of practice, right? And being able to just like understand the person that's on the call, right? And being able to connect with them very quickly, right? If it's in like a couple sentences, if you get it in a couple sentences, great. a little bit longer is that also great and then understanding and figuring out what the problems are yeah but we need to practice practice is the hardest part because again it's one thing to pick questions and to be like i'm going to ask these questions and it's another one to have a person and then be like okay but you're going in this direction then you ask me this and i have to

[00:28:50 - 00:29:39]
answer that but also think about how to get you back to what i want to ask you right that's the harder part i think um and like being like okay let me do the initial small talk let me make sure we're on track, we may find out the answers to these, but also be very personal and charismatic and then make sure I get the next step if you're a good fit, right? That's the hard part. Okay, so need, right? Like questions that you can ask about need that you can think about for like how much they have this problem or this game point, like telling me about the most pressing problem you have, how long have you had this problem or identified this problem, is this a problem. Well, if you seek out a solution now, like was there an event, a trigger or something that happened, right? Because you are asking more because you need to learn more information about them, right? What are your goals? What's preventing you from hitting them? What would

[00:29:39 - 00:30:00]
your progress look like if this was solved today? And these are just different ways of asking the same thing, right? You pick, and if you want to say it in a different way than any of these, that's fine. But these are just some examples of how to ask things in a different way that will get you an answer that you want, right? To understand the need. Different markets how you ask things are different right you're all different people how I

00:30:00 - 00:40:00

[00:30:00 - 00:30:47]
would ask is going to be different than how you ask and that's totally fine right as long as you get to the same point at the end right and get the answers to things um what other solutions are you evaluating always always always ask that one if you're not asking that one like ask what else they're evaluating because you want to know what you're comparing for larger enterprises there's usually pilots and things that happen at the same time um for smaller companies they're probably comparing at the same time i just pick want to be good on the paper multiple titles right um when we're thinking about urgency how important is it what's your time frame how does this stack up against other priorities right when your team's thinking about their priorities like is this something everyone on the team wants to solve now is this only you want to solve this right now like what happens if this doesn't get solved right if you're like asking them to imagine okay let's say you don't solve this this quarter you want to

[00:30:47 - 00:31:35]
solve this quarter over the quarter but you don't right you don't find a solution that you like So when it's a good fit, what happens? Right? And have them tell you what happens if that doesn't, if they aren't able to solve it. Right? And that's really good because they not only imagine the pain, but you know what the pain is if they don't do it. So you can bring

that up with her. Right? Or talk about it or rely on that. Are you looking at those solutions again? And when's the latest you'd like to make a decision by? Right? Like understanding what that looks like for them in terms of their timeline. Or can say, I don't know, when we find a good solution, that's when our timeline is. budget, right? Budget, some people will be very direct about budget and will be like, we've already been spending this much and we just need something cheaper, right? We're using this other product and it's too expensive. We want to see what else is out there, right?

[00:31:35 - 00:32:24]
Then you'll already have a ballpark of what their budget is. What are you currently spending to solve this? What's solving your current problem worth to you, right? And it's, again, depending on your ICP, depending on the person that you're talking to. Like, some people are more open about what it costs them to solve things than others are. And so you need to know and understand like what's important or what's valuable to them to understand the amount they're spending for this and then again what's the process for approvals for this. And then a qualification example. I have just like one example of a script if you don't have one that you want to use to start practicing with right? But some of you already have some right? Some of you already have a structure. Some of you have some questions you can pull questions from the ones that we gave already but like when i want you to think about the kind of questions that you're going to ask and how you're going to ask

[00:32:24 - 00:33:09]
them and structure them in a way that feels comfortable for you first but feel comfortable like if they ask a question or you go back and forth and you end up on an order you can go back like you have to keep in your head of like the things that you need to ask and prioritize i found with a lot of technical founders it's helpful to have some structure to start with doing it right so having something that you can start and go from there and practice and try and see what feels comfortable and then change it if you have something you already like that's working or if you want to add some things then do that right again it's just getting to your qualify your sales qualify qualification at the end that's what we want to get to right we have a scorecard again for some people for either technical founders or founders who haven't done much before having a scorecard for yourself for like

[00:33:10 - 00:33:58]
understanding what that is for you to check out or if you have a salesperson I'm going to listen on your calls and give you feedback on how you did on them. Right? And you can give us more credit like, did you get the state? Did you get the pain? Did you get the impact? Did you get the urgency? Like, did you uncover all of these things? So if any questions you want to ask, did you get these things? Right? So you get all of these in the discovery call. Right? You're grading each other. If you're two founders and if one's doing it, the other one can stand on and grade them and be like, here's what we need to ask next time you missed the urgency. We don't know. We don't know how important this is to them. Right? same thing right here's like just an example like fintech company did you ask these questions did you get part of it did you not get part of it um just another example if you want to do this

[00:33:58 - 00:34:46]
inside your team to practice it's nice if you have a couple co-founders or team members to just go through to be like you asked as well you actually didn't uncover the budget in this you asked a couple ways they weren't able to give it to you next time try this question right a lot of these back and forth and this is what you'll do with a lot of your sales teams as you grow we have a sales manager who's managing people they spend a lot of their time reviewing calls and then going through discovery and they're like here's what you missed for this icp you said it in this way i would have followed up with like this question instead right that's a lot of what sales coaching ends up being it's like here's how this conversation went here's where you could have asked another question here's where they like took you down this like rabbit hole direction like i would have But that's a lot of what we need to do with sales coaching to get people to go to a place where they can uncover and get all of these things in the discovery call to have a successful

[00:34:46 - 00:35:35]
demo call. Yes? What would you do with the time? 30 minutes. 30 minutes. 30 minutes. Even less. If you can do it in less. Sometimes it's hard in less. If you do the intro, if you do small talk, if you do introductions and then you try to ask these questions in a casual way so you're not just like question, question, question, question, question, right? 30 minutes is a good conversation time. There are some customers that would be typically asking us operation owners. They will ask you. And their opinions will not be enough. Usually for us it's up to $1. Yeah. As they want to see them as soon as possible. How do you handle them? Well it depends again, right? We were talking about like the doing the demo on the call. If you can do the discovery and find it out and do it, or if you do the positioning and like framing to push them to another call, right?

[00:35:35 - 00:36:31]
to do the more custom demo right you show them some things and then say here's like a small part of what you mentioned but i'd like to do a full like demo like with anyone else from your team that you think this would be relevant for usually we have x y and z people join right and you're framing it that way but if it's an hour like some people like in some industries like have an hour long discovery call right and that's okay to have if you're like i booked an hour because i'll have some questions for you i know you'll have some questions for me i want to give us enough time So there is no risk if we start to demo the system, they would just drop out of the themselves? If you start demo, there is that risk. There's a risk if you are not set up to demo what they care about to show them the value that they feel like they've gotten enough and then you lose them because you haven't prepared enough from the discovery to show them what they care about for them to see value.

[00:36:31 - 00:37:19]
that's the risk in doing them in one right if you practice a lot and can do it then then you can try doing it right and having it in one but like there is that risk because you haven't taken what they told you and thought about how you're going to present all the functionality as value for them and how it ties into what they care about that's usually what the sales rep will do right if they take the time to plan okay here's a little bit of the discovery call here's how i'm going to frame what's next right and when you've done it a lot you'll be like oh this is this bucket of people about good people, this is this about good people, but they always prepare based on the disclaimer. Okay, then just a couple final things and then I want us to practice a little bit. So if they're qualified, right, move them down to a demo, yay, they become an opportunity.

[00:37:20 - 00:38:10]
They're not an opportunity. Who uses opportunity as a, you use opportunity? You're the only Does anyone else call a SQL turns into an opportunity? Anyone? Opportunity? What? You're not doing goals deals, but it's the same. Okay. That would be the opportunity size, would be like the value. So after your discovery call, right, and then it turns into an opportunity, you are a sales qualified lead, you've become an opportunity now. budget the timeline all the things right then you're like i think this is a 100k deal that's going to close and you put like a projected close date of like two months of one month of whatever it is right and then that becomes your pipeline of like deals a lot of people right that is the

[00:38:10 - 00:38:55]
only thing that should be in your opportunity right and that becomes your pipeline a lot of people put things really early right and so then investors or anyone else will ask people they'll be like okay you have a five million dollar pipeline what is in there and you're like made up those numbers with leads that came in and that is not no right if you can say these are sales calls our pipeline and sales qualified leads that we talk to that are projected to close in the next six months right here's how we've mapped out that makes a lot more sense to an investor and they're going to take you a lot more seriously than if you're like i have a five million dollar pipeline and it's all these people that could buy from us because they're leads in our crf right no one's going to take you seriously if you say that right so when they become an opportunity They become their sales qualified lead. There's someone with a value associated with them, like an amount they're going to pay.

[00:38:55 - 00:39:40]
You have a timeline that you think they're going to close in, right? And it's okay if your timelines are off at the beginning, right? Because it's you taking your best guess based on what they told you their urgency is and what their timeline is for when it's going to close, right? And you should have a projected close date and then you should have an actual close date and see how close you are and then work on decreasing that, right? And work on getting closer so you can project a little bit more accurately for your own productions but also for a team. Okay great. Then sales opportunity, right? When we're talking about a sales opportunity, it should have a third pain point. Include a prospect that's interested in solving the problem and in your solution, right? If they're not interested in what you currently have as a product and what you're doing, they are not an opportunity, right? They should

[00:39:40 - 00:40:00]
not be in your pipeline. They should be a good fit and likely to close, right? They're not an opportunity if they're like we don't know what our budget is we're just exploring we're trying to figure it out like they're not enough to give up they're not an opportunity they should not be in your pipeline right okay what if they're unqualified what

00:40:00 - 00:50:00

[00:40:00 - 00:40:29]
What if you talk to them and they're like, I know that you build AI agents, but I would really like to have a drama goes in space. And you're like, that's very cool. Not what we do, right? You're like, that is absolutely not what we do at all. Would love to help find you some options, but that's not what we do. Or anything else, right? If they're like, oh, we only do two doubles a month. You're like, what do you do now? Talk about community. No!

[00:40:39 - 00:41:24]
No, we're going to do better. Right? We want to do this call to embrace the league, right? And maybe they'll come back. They can say, I'm going to do it. Many things, right? We want to do it nicely, right? No urgency, right? If they're like, this is something we want to solve the next year. Sometime. You're like, oh, that's great. Well, I would love to show you all the demos in the world for you to maybe eventually sometime do something. like doesn't seem like a really good fit for you right now like would love to help you solve this problem when there's like something that you can try to right right so like we can send you some more information come back and let me know right when you have like this problem we're doing this you're doing this and we'd love to help you right you send them all right right wrong profile right

[00:41:24 - 00:42:12]
again if they're like trying to solve something that you don't solve we really help people to do this we don't really help people with this use case you can say here's some other people that think would be a good fit come back if you want to solve this thing right nicely requires functionality right that's like the easiest one we know we have to have this thing you don't have it right and we'd love to come back looking for some design partners with a larger company right we'd love to keep you in mind we'll like be in touch for planning on doing this the next couple quarters you don't have it now can i come back and talk with you once we have this so as we're building it out we'd love your feedback as we're building it out i think it'd be what create pricing right for you to show you how to build exactly what you want all right okay nice things nice things important to market was unqualified um in your crm because you want to track why people

[00:42:12 - 00:43:00]
are not a good fit right if you're not talking why they're not a good fit then you're not tracking whether there's new products that you need to have right if there's like functionality you need to build if you're getting a lot of leads if you're b2b and you're getting a lot of consumer leads right you want to flag that because that's important for your team if they're unresponsive if it's pricing if everyone is like too expensive too expensive too expensive for like a month and you're like maybe our pricing is wrong we should go back and revisit are the pricing is wrong or we're not framing the value as how people see as value right and so when you're creating your list of just qualification criteria i want you to make sure that you have enough options that you or your sales team can pick the right one but not so many that people just pick one because there's like there's too many i don't have an anonymous thing one yeah okay how should the conversation go right

[00:43:00 - 00:43:47]
for has anyone used gong before gong is nice they record your conversation and give you feedback now they also what experience but it is useful right when you're saying like here's what how our conversation goes with our top performers um and with average reps like you can see a lot more back and forth right with the higher performing reps because it's more of a conversation it's less like talking chunks talking big chunks talking big chunks you're having an inner conversation when you're going back and forth and there's a flow right um and so you want it to look like really messy you like it's going back and forth we don't want to talk for too long and they don't want to talk for too long

[00:43:47 - 00:44:33]
in a row you have a question? it's maybe a weird question but what is the overall goal of this for us because for example for me I'm sure that I will not be an expert anytime soon because we don't want to get back our sales team Is this just to like also know a other thing and have some overall knowledge? Do you mean for B2B in general or how to have like a couple of people? Process for founders and business? I mean you can't expect salespeople to be successful in their roles if you don't know how to do it, right?

[00:44:33 - 00:45:24]
And it's really easy to hire salespeople that are not good at their jobs. Salespeople are good at talking, right? It's very easy for people to hire such people that are really good at talking and are like, they're doing a great job. And then they

go and they're not performing and you're like, I don't know why you're not performing. And if you can't go in and say, let me listen to some of your calls. Let me hear what you're saying and what you're doing. If you can identify and pinpoint like things that they're not doing well, it's going to be hard for you to pick people that can do it right. Yeah, exactly as we had in previous years that we had some sales guys, like checking the metrics, how they perform. We are pushing on this kind of stuff. Second question, how can we also implement these learnings to be to see or this is only

[00:45:24 - 00:46:09]
like focused on the . I mean, you can do it with like interviews in the same way and talking to them. You do partnerships, right? With B2C, you're often times partnering with people and it's the same. You have to build a pipeline the same way. And you talk to people the same way. And you're figuring out what their goals are, what they want, what their timeline is in the same way, right? You're going to have an investor stay around. You also have to qualify them, right? Every investor is not your investor, right? You're also going to qualify them. You're like, you're not a good fit. I don't think we're going to work well together. You're definitely leading me on because you're just asking all these questions and not doing anything, right? And so the same flow that you do for this, you will do for many other things. That's what I'm saying. Good. Great questions. Great questions. Okay. Similarly with, like, talking, right? Top rucks talk less, right?

[00:46:10 - 00:46:57]
because you want to be listening more, right? You want to be asking more questions and listening more, but also your prospect is also probably also going to want you to talk more. So there's like a nice back and forth. And then question two of you about the survey. We already talked about it. Do you want to talk about it again? They push for a demo immediately. Yeah, I think we covered it. Yes. Okay. Okay, now I want you guys to write out your disco questions in flow and what you think it will be, right? Okay, what you can use what you currently have now, maybe add some things to it. I'm going to give you, we have some, great, we have an hour. So I'm going to give you like 15 minutes to come up with like an outline of questions that you want to have for a discovery call. And then we're going to have some volunteers and we're going to do discovery calls. And at first we'll do them, I'll be your customer, just tell me the ICP that I am,

[00:46:57 - 00:47:42]
who I am, what my pain point, what my problem is. And then we're going to go back and forth. Because again, it's one thing to write the questions and know what you have to ask. You have a person who is asking you things and saying things and you're trying to navigate the conversation. So I want to start practicing today. You should keep practicing either with each other in your teams, like with different people in the room also, because it really is just like being comfortable navigating different conversations with different ICPs, right? And if there's some ICPs, this is the best one. If you have some ICPs that you're like, you're almost for ICP, but not because of this, those are the perfect people to practice on, right? If you're like, oh, you only have like 10 demos a month, practice your Descriptory Postscript. Because you're like, well, if it goes badly, I don't want you as a person anyway, but I want to practice and have these interactions.

[00:47:43 - 00:48:27]
So that's a good way to do it. Just start. Okay. Does that make sense? Thinking about Descriptory Postscript? Who wants to be the first person? I'm the first person. Okay, well, I'll give you 15 minutes, and then once you're feeling confident in your questions and how you're going to do it, or I'll just pick someone if no one wants to. We have to appear from our ICP one decision maker. That's okay. I don't want to go to unrealistic where we are today. No, the server call is usually one person, right? Sure. But if you like ultimately make the decision, like let's, for example, the coach and the gym, that's like, you know, do you think it's like, just, yes, yeah. I'll do a lot of the personal trainer. Yeah, we can't monitor that like really fast. So it doesn't have to be like a big problem for us.

[00:48:28 - 00:49:07]
You can literally pick any ICC that you want to practice on. This is just for you to get comfortable and to practice and see how you start to do it and see where you have gaps, right? That's all it is. It's just practice. Yes? Okay. Fifteen minutes, and then I'll ask for volunteers or choose some. Right. No. Sorry. Thank you.

00:50:00 - 01:00:00

[00:50:00 - 00:50:16]
traveled in the Korean century because I know one of the best artists, one of the flow scenes. So we go to create just a fundamental flow, completely based on non-reduation, marketing, etc. We're not the same person.

[00:50:24 - 00:51:08]
Sometimes she is feeling scary, weird. She is not like a, you know, she is one of the co-centred and the salesman makes herself. She is not also, we don't feel like she is great at it. So eventually, how can we make a job? How we can learn, she can learn and actually do the process? So, another person asks, what's the human factor? I guarantee that human beings never pay for a lot of compensation. Because they grant you a lot and they demolish you. They end up saying I will buy this expensive investment. One of the reasons, I don't know how to teach that. So, is it the human factor of a part of sales?

[00:51:09 - 00:51:56]
and constantly go out the conversation. Yes, but first of all, the part is practice, right? It's where you're only that one person, and like there's no one thing like, when that person says this, here's what you say to bring back, right? And so part of it is like, if you come around with those things, and so you can also be like, okay, when someone says this, here's what you do, she's not going to run on her own, right? like maybe she'll try some things but like there are like sellers in the line right? that you can like learn how to do something but a lot of it is literally having a person that's like I've already done this and experienced it and I'm going to listen to this conversation and tell you like where to navigate or like what else to do instead right?

[00:51:57 - 00:52:43]
So we're looking at something that's fine. Now we love you as a major approach. So we're thankful about you. Yes, perfect. We also work with this open mind model. We have the eyes. We know that I'm such an experience. We know that I'm so excited. So I know what's done. to do all that. Yeah, yeah. Yeah. I see she didn't come on this morning, she was a special meeting, like the virtual meeting, she makes a list of the scenarios that happen, of like, here's the things that happen, she's like, I don't want to see that, here's what they say, what should I say next, and we can go through all that.

[00:52:43 - 00:53:31]
Okay, so, that's very good, you can recall from Colossus, I read English, Okay, let's say we do this, right? Yes. Because we write down some things, and how deep they are the containers? Yeah, we should have, like, here's a, like, objection that we should have, we should talk about the demos, but, like, here's things that people bring over to say, and here's how we're talking about. Like, you should have, like, a knowledge base, of, like, here's the types of things that come from the bottom. Or like, it should be like the ICP and problem thing. If it's some of your employees ask the same things and do the same things, right, then it doesn't have to be separate. But like it should be like the same person, well like when they join, and you can have her start to build this out, right?

[00:53:32 - 00:54:22]
For when she like, reminds you things or has a new objection, she like writes and asks, she's in all the place of like, this type of ICP asks this thing, and I don't want to say, how should I say it? Or she's like, this is what I've met. What do you think? Should I say it differently? But you should be starting to build that out, like for her and for you guys, therapy. And let's say she leaves and finds another job. The next person would have this baseline of how to discern how to communicate value. How would you find that issue? Because it's a common thing. The one who thinks .. and right now we go after every one of those customers that find the fire and we try to talk to them over a new one

[00:54:22 - 00:55:09]
but that's not quite a communication so maybe we have a thing with some of the other things in automation Yeah. I mean, you have to determine like if self-serve and some people buy things on their own versus if some people will not, right? And maybe you set up some things that you can do at scale. Like maybe you say like, oh, we have this, we're having an onboarding for bar owners in Athens where we walk you through, you'll set up your first job ad and you'll do all of these things, like we're going to do it together and then if 20 of them show up, that's great, right? like teachers are going to do these things and that's like you're like kind of qualifying but you're more like helping set them up but also they're kind of qualified until they

[00:55:09 - 00:55:54]
have this urgency we want to do over in a common attendance, right? You can do it with more in scale, but like more volume but less, I don't want to say valuable, but valuable, that you don't need to say something in digital life, right? You should determine differently where your like cutoff is approximately of like we should and these people can do some modifications but not higher touch because they'll you can do it I'm just thinking about myself so So, the first thing I thought was that everything that they would do,

[00:55:54 - 00:56:48]
or whether the companies are like, access to the transfer, would sell access to something that they would like to do in the world, or, like, success rate, because it's very low, or, you know, if in the future there will be some micro-commodation. So, it's a lot of micro-commodation, If you have 10% you have shown how you want to use your apartment. And you drag the open. Of course, if you don't have the wall, you drag the open. If you're open, maybe then the 70 million. I like to say about like, like, you can honor some of those. I think you also have to try, I know we talked about a lot of things, but like I like that halfway through the period, like that someone's paid for, reaching out to them then, because they have to have time to try it or not try it, and they haven't tried it, you can ask them why.

[00:56:48 - 00:57:34]
But if something didn't go well, you still have another fear of having to fix it, right? If you do it at the end, when things expire, you don't have any more time to try to fix anything or do anything to people because it's expired without the buy again. They already didn't like it, right? But basically, give yourself a little buffer to be like, oh, I didn't pretend, I didn't take your attendance, Let us prove to you that it works. Here's what we're going to do for next week and then she has time to do it to get done during the day. I'm going to have to decide which one is like, if you want to go to each point. If you want to go to the other side, you'll have someone. That's 16. But if you're going to have a value card, lower value, but bigger brand. Then you'll be like, well, it's worth it. You'll be like, you paid a little bit of opportunities.

[00:57:34 - 00:57:38]
Yes. So while you're thinking about this, but also the potential.

[00:58:05 - 00:58:51]
but are we open the way that we need to become open to us and say, we have to talk about. Sure, we should not speak to most of the system. On the Shakespeare side, how deep they are, I have a question, how deep they are, you don't have to have a line, they say, like this line. It depends on what you have, right? It's like if you have like a bullet point of like this is what you say, is that how they want? Usually the people who have like here's how you say the line and they'll say it apart from you now. You can change a word or two if you say it easier. But like say it as general, right?

[00:58:52 - 00:59:02]
Because how you structure it is usually how you want them to say it. If they change too much then it becomes a thing, right? Yeah. We good? Yeah.

[00:59:35 - 00:59:58]
I don't want to be there. You don't want to be there. But I'm sure I have some. For more than 15 years, you've been older. Because I don't want to be for my future. Yeah. It's a protocol that you need. Every day it works. Yes. Actually, there was in the last five years that it changed.

01:00:00 - 01:10:00

[01:00:00 - 01:00:26]
The cheese day is not bad. Ah, not cheese. Not cheese. Not bad. Sorry, it's a... My time is back. You know, I think we did a very good thing. The cheese day is coming. It's coming with the cheese. Cheese day. No bad. No bad. No bad. No bad. No bad.

[01:00:38 - 01:00:41]
Thank you.

[01:01:28 - 01:01:31]
Thank you.

[01:01:46 - 01:01:47]
Ah, yeah.

[01:02:16 - 01:03:00]
We have thousands of people, and you know, they have companies, so they have good jobs and not as a nice one, but as a safe one. We are with that. We don't, we should. I think we want to make it. But I say to do the magic, we are trying to do the magic, not just trying, just challenge that I have a better magic. You have just 15,000 at the 10,000 company. I have 6,000. And I'm an area broker, so I can. Yes. And now, they can keep you on the floor. Just use our .

[01:03:02 - 01:03:03]
Why from .

[01:03:14 - 01:03:59]
yeah I think no one says more. Yeah. Yeah, but that is a massive, like, a private sector. That is not as happy. If you don't talk to them, I mean, if I have a single class, then we should know that because if you ever pass properly, they can see what they are going. So I think that comes from the other person's own. Don't turn. Just, just me back. Yeah. It's happened to all of the paper. They are on the desk and they are on the desk. Now, when we bring this work, they are, they hit something, they copy it. Yeah. So it's very small.

[01:04:00 - 01:04:31]
So, like, you need to be a piece of paper, you want to just get this one to kind of back. Yeah, back, back. 9 minutes. How many people can you show them? How much back did you buy? Because we need our best to get back here. So, let's get here. That's actually a good one.

[01:04:44 - 01:04:47]
Thank you.

[01:05:03 - 01:05:49]
Discover your home? No. Okay, yeah. Okay. How did they go? It's a little hard to go. But I'll make sure you get it. So they do the same thing. Yeah. I mean, they make a challenge that there are different kinds of people. And so, finding the right questions because there are a lot of people from the only government. There are more people who just told you very want to be something.

[01:06:17 - 01:07:06]
So, of course, in the beginning, it was already cool. Like, if you have a color product, at about 50 years, it's like, oh, they're not buying anyway, so I might need to do all these answers to these questions. And then you just become self-aware, and you're not going to help them anyway. That's the question. You know what they want. Yeah, for me the biggest one is really like how old you have that particular version that's in that 12-year-old dreamer in the New Yorker and that we know their company like the biggest virus. You know, right guys in the beginning. And well, I do it, I do it in my different way, like 500 plus, this sort of stuff.

[01:07:07 - 01:07:52]
because that's among my personal ones. It's a little bit of a mistake. Because I was in their position exactly as well. I'm not believe they're only going to say chair in a minute. So there's a budget and a project that's going to be there. Like, all the other people can talk about. And I'm going to say, I'm going to say, is that helps to turn around this. That has helped a lot. Like that conference? And I think we're going to have to do that. yeah perhaps the word happened i'd rather try it because like it's just like from 9 to 8 to 7 to 6 yeah how many of them how many of them how many of them are yesterday

[01:07:53 - 01:08:39]
he was just he came in he was like oh we only do the jokharadis which is blue bar, and then yeah it's just like, we have all the blue bar people, so we can find anybody, I guess it, public, they can find friends, you know, me, you, all, they, them, there's no problem. That way they're out there. So for us, just ten minutes, I still talk to him and I said, okay, we're adding more and more sources, let me feed you, and that's available for them. You were good. Yeah, great. Absolutely, you know, I'm always in there for time. I cannot help you, I'm not planning on being a lobby, but then I'm just about to be ready.

[01:08:40 - 01:09:24]
Yes, this happened to you yesterday. And just like 10 minutes later, there was a call that ended up by this morning. I had so much to do, I didn't even manage to set the difficult materials. I used to set the call, but I barely had something

to eat. Then we realized that system access, immediately started playing. In the call I had about 10 questions and then I was rushing that phone so so funny. Maybe you thought that phone also? I just said no, sorry buddy, like the next one in general is how do you apply? It's a massive request they have right now.

[01:09:25 - 01:09:59]
And then today like a dirty submission period. Yeah. Great. All of that. So it's all a story different pelts. Yeah, yeah, yeah. One of the families are only in R&D. I understood all the names I think has. And, um, what do you see? Yeah. Yeah, especially since the market right now, we're in 24. I think that's really nice. I think if you end up going up market more, you're going towards like enterprise or like more like, Yeah, okay. So

01:10:00 - 01:20:00

[01:10:00 - 01:10:45]
like really really big logos is and then like all the night members they have no decision making or they have those failures you have the polish so basically it's a graduate channel plus they're active in so many different avenues like uh cnpc sort of for europe right massive massive We did it, and in Poland they are really giving us for trial. And obviously it starts like... Hey, we saw all these awesome logos. I wonder if we can get somebody from our industry in particular. Like, a question for the startup. Yeah, you have all of this. Like, what else?

[01:10:46 - 01:11:29]
You got your album, and you got signed up on the legal. The price is good. Like, you need it. has that question about that freaking industry. What does it change? They're hiring Netflix people to come work for them. So you've been at that high, you've been at that high. Why does it apply? Unknown. And I realized I might have missed something before. But imagine, there's already five things that you use, very interesting and asking asking why we saw what effects he had to do this now stop talking

[01:11:31 - 01:12:16]
how they need this case study from the UK that she does obviously I'm trying to go around that right now and see what happens but she doesn't care about it I'm asking you, like, the hard thing is to, like, how many things are in the right field support. Like, when I hear you, you know, he said, like, you can see the mic, or I guess, you know, I'm a lawyer, if she wants to. Yeah, yeah, yeah, yeah. But there's some things that I'll get identified. Is it because you're working out that well? Is it because you're, like, so you're working people who can see her now? But, you know, you're working, right? Yeah. Right. And then looking at the other people who are going to be around in three months.

[01:12:16 - 01:13:00]
Right. The reference you were showing today. I don't know how many. I don't know how much you know that people said there are like 50, but these are right above. Yeah. So I'm not sure which is a good balance there, right? So on every post that somebody references, they're like, way to go in the desktop. Like they're paying $1. 20, 20, 20 to go, go noon, you're the best. Like it's so obvious, it's like, okay. It's not a matter of course, it's just kind of a challenge. Sometimes it's just like people, you know, you're a little bit of a focus, you know, you seem like... Yeah, that's what I went through.

[01:13:02 - 01:13:50]
Just like, I had a focus, it looks like, Yeah. It would like to be a really good job. Or just like, like, visible everywhere. Like, self-hosts will get this, like, and that's what's up. But they were really good, like, 10 years ago, like, getting, making it all through. They were always in us everywhere. And they were just always everywhere. You know, like, people like, people. And they were like, everywhere. Because they're like, we're not going to be able to do this. We're going to need to sit here. That's very medical. Technology. Yeah. Yeah. That is great. I don't know how far in that space, I mean, how evolution it is.

[01:13:50 - 01:14:40]
Yeah, are we ready? Are we ready? Hold on, we can add one. So right now it will be the... The... The... The... What? The CEO. CEO. CEO. CEO. You were like... Wrong player? Wrong player. Well, I'm gonna ask what we wanna do is everyone seems a little nervous. So there's two options of things we can do. When we get over here... What do you think you're doing fast? Actually, what? So usually, right in... So there are two ways that we do it. If we have a shy batch, you pick someone from not your company and you can practice together in pairs.

[01:14:40 - 01:15:25]
And then people can rotate out with me on their own. If it's not a shy batch, we get volunteers and they come up and everyone watches and we frequently do care. But either one I am fine with, but after you guys feel like doing it, how are we feeling? Good. Yeah? Do we want to do it in pairs? You can also. More people get to practice more when you do it in pairs with each other. You can use a scorecard and see, tell them the ICP that they are, and then you ask them questions and start doing it. More people can practice more than if just one person comes up at a time. But those do you guys. I would like to see you push back on the cells first. I have five more today. Perfect. Okay, I'm a recruiter or am I a lawyer?

[01:15:27 - 01:16:14]
You are a recruitment agency owner. Recruitment agency owner? Okay. Yes. How many people are in my recruitment agency? You have, let's make it a boutique. So boutique means that they specialize on certain verticals. So you have seven recruiters. Uh-huh, recruiters. What vertical are we focused on? Let's do, well, let me help myself. Let's do finance, finance, corporate finance, venture capital, something that you guys all know. Finance, venture capital? Yeah. So I'm finding associates, I'm finding data analysts, I'm finding potential partner, potential new partner.

[01:16:14 - 01:17:02]
Yeah, like more on the higher end. Analysts are not scarcity. They graduate, they apply immediately. The further you go, it's like associates, reps, directors, partners. So you're a boutique that specializes. What's our problem? The problem is time that is scattered around different tools. LinkedIn and recruiter slowness. How many people are working? All of them. A lot of budget spent on those scattered tools. A lot of admin tasks that your recruiters are doing on daily basis. Ok. I'm ready. Are we all ready? Yeah, I just turned off the 500 light because it's...

[01:17:02 - 01:17:48]
Distracting? Yes. Yeah, because we can't see. Yes. Come here, come here. I'm ready. Just sit here in the front. From there it's hard to look at the Brianna because it's like a shining... You don't need to look at me just to listen. We want to say Brianna shining or shining. I follow the framework. No, you do it however you want to do it. Okay, cool, cool. Hi Brianna, nice meeting you today. Hi. Cool, where are you joining me from? I'm from San Francisco. Oh cool, I'm actually in Tbilisi right now. Do you know where that is? Oh yes, yeah, you know a lot of people in the US get confused with Georgia, whether it's like the country or the state. A lot of funny jokes about it. Do you get those jokes a lot?

[01:17:49 - 01:18:37]
About Georgia, they don't know where Tbilisi is. My audience, Germans. Do you really based in Germany? I'm originally based in Germany, I'm based in a small town called Hebron. Do you know where that is? I don't know where that is. Okay, it's middle between Stuttgart and Frankfurt. Very, very small city. They want to build an AI competence center and conquer that compete with American AI giants from there. Interesting. Do you usually work with German companies? Yeah, so at this moment it's a good question. We have more than 150 recruiters using Yenna only from Germany. Okay, well I'm gonna say, do you have any other people in the US that you're helping? Yes, we have a couple of agencies. The target market is Germany, but it's now in geographical expansion.

[01:18:38 - 01:19:24]
But you have a couple in the US now? Yes, I do. Okay, are they in the Bay Area or New York? They are actually in Bay Area. Literally one of our clients name is Silicon Valley Recruiting. Okay, who else might I know? You might know a bit more global customers like Amro and Antal, Stanton Chase, they have offices around the world. So that could be beneficial for trust, right? Are they looking for more higher level people as well? They are not hiring in your vertical though. Ah, I see. Do you have anyone who's hiring my vertical? We have several finance specific boutiques that are doing recruitment work, but allow me to interrogate you a little bit on that.

[01:19:25 - 01:20:00]
Sure, I guess. Sure, cool. So basically, IANA consists today of more than 10 different modules and for me in order to be able to show you the best of what we have. and to cater to your expectations then yeah I want to give you a bit of a brief. Are they specific for industry or are they like how are the modules helping? Yeah cool so the point is that you don't need all the modules okay so this is why sometimes we do in the beginning of the conversation just to set the expectations

01:20:00 - 01:30:00

[01:20:00 - 01:20:47]
we do a bit of a discovery where we try to understand, you know, in which stage of the complexity of the technology you are. This is nothing serious, it's very, very simple questionnaire, but it will help us to make this demo personalized as possible. Okay. Okay. So the first one is like, what does your team use? Like what do you use every day? We've used everything. We use LinkedIn Navigator, We've used Lever, we've used Greenhouse, we've used everything under the sun basically. She knows her business. I'm doing all the things, right? We've used different agencies to help us, right? We subcontract different agencies. Okay, but by use this do you mean historically or do you still use that right now?

[01:20:47 - 01:21:37]
Currently, yeah. Okay, cool. We currently use some right now. And so I guess like what I'm thinking about is like I want to find people who can help us navigate some of these things. higher level roles right we've used a lot of tools I've used a lot of tools I understand like how to use all of them what makes you different than all of them that's what I'd like to understand. Okay well let me start off with the first value add is that your CFO will lower us okay and this is how you're different? This is just the first one right so your CFO will lower us because you will not need to sign up all those invoices like you just do one. Next one. I don't think I have a problem with invoices. Well you might, well your CFO might have a problem with budget. Maybe, I don't know, that's not something I've talked about. Cool, well anyway so cutting to what

[01:21:37 - 01:22:26]
Yana is doing. No customer would ever do that. They usually sit and listen and respond. You just said anyway to her father. Maybe they're German. This is not really. So usually what I would do is I would ask you something like so you know what are your most time consuming tasks so let's just assume right so what do your recruiters spend most time on daily basis? Trying to find profiles that are a good fit. Exactly so and then I would ask and what type of tool sets from everything you just mentioned before

[01:22:26 - 01:23:12]
would be the biggest time wasters, the biggest time eaters? Because there are some that are really relevant and then there are some that perhaps... I really want to have more fine-tuned ability to search. I think we're looking for people with very specific backgrounds and it takes us a long time to find them. There's not the correct filters that we need. It's hard to find them. There's a couple other startups in the Bay that are doing something similar that are using AI to try to search through to find people that we're going to reach out to. And so we're testing a lot of different things and wanted to see if you would potentially be someone that we could try as well. Okay, thank you.

[01:23:13 - 01:23:59]
You have two more minutes and then we are going to break someone else up. Sure, sure. So just cutting to the chase, so what I heard so far is that the typical time spent is on finding the candidates. This is the number one problem solver that Yena does. Number two is you would get a targeted list where we get usually about 90% rate from list to short list that you can present to the customer. you could do everything in one go. Yeah, well sorry guys this is too short for me to interrogate Brianna right now but well you're telling me all the things you're not trying to do. I didn't answer that many questions. Yeah. Okay, let's do that. This is not a natural call so

[01:24:00 - 01:24:48]
very very difficult. It is difficult. You were a good sport for coming up to be the first person because the first one is the hardest so I appreciate that you are up here doing this, Right. It is very hard. It is hard to do it in front of an audience. Right. Also, and to go back and forth and I was being more difficult because I know you'd be fine. Right. Um, but it also right depends on your market. Like I was more difficult, but depending on the market that you go into, if you go into the U S market, you will get a lot more difficult people. Right. Like, uh, this is not abnormal. Like how I was asking and doing things. I was actually like quite nice. I think like I was more direct, but I was not that difficult. Um, if you're in that like recruiting HR space, have like more women who are just generally friendlier and will be less pushy but what they will do is they will listen and they'll be like you're just talking and telling me all the things

[01:24:48 - 01:25:36]
and then they're just going to stop responding to emails right because they'll be like listen and they're like okay well i'm not going to push back because okay i listened to this call and then i'm just not going to respond to you when you follow up because this is not like relevant right i would want you to have asked more questions at the beginning right i

was waiting to see when you would turn it around i just kept asking more questions let me just very quickly guys give typical customer will give you a bit more time than Brianna did to me. And that results in my inability or my paralysis at one point because you're just like, hey, you know, let's... Yeah, I'm just gonna ask you all the... This will happen though, right? This does happen in the US. You will get people that are like this and you gotta be like, I appreciate that you're asking me all these questions. Hold on a second, you're not gonna do it and you'll feel it and you'll feel like this battle back and forth of them being like

[01:25:36 - 01:26:25]
trying to take over and you taking over and it's actually quite fun when you do it but I was doing it because I know you would be fine and keep going and I was waiting for it to happen. Okay, someone else. Good feedback, good job. Okay, next person. Okay, yeah, I'll have it to come. No? During the first minutes, Yes. Yes. Yes. Yeah, you need to be friendly to like build a rapport to like do something together, right? You want a little bit of like an opener of a small talk. You want to try to connect with them as quickly as possible, right? Sure, you are a coach, a gym coach.

[01:26:25 - 01:27:11]
I mean, where you are in the Bay Area. You are working with your clients. There are like 50 clients. You would like to scale with your business. we would like to have more customers who would want to improve their customer relationship get more data from their customers maybe save myself some time you're already building their programs and doing like calorie tracking and a lot of your customers don't have wearables they're tracking their sleep and this is something you would love to are they older or younger? my customers? they're older now let's assume there's some people that are anti-tech but even like i live in berkeley but let's assume even like if you have apple watch a lot of people don't sleep in their apple watches right so i mean

[01:27:11 - 01:28:01]
let's assume this for this yeah so that's who you want yeah i actually take off i wear an aura ring but i take it off when i work out because it's annoying i can't like lift yeah yeah hello how is your coaching and everything um good you know it's gotten busier at the end of the year I feel like people are like ramping up, had lots of fun over the summer and now are like thinking about Christmas and preparing for like the big Christmas dinner and trying to get fit before the end. How long have you been coaching? Um, hmm, that's a great question. Maybe like nine years? Yeah. A lot of experience. A lot of... I'm nervous. No, you're doing good. You're doing good. Yes, yeah. A lot. I really enjoy it. It's really, it's really interesting. I actually used to be in sales at a tech company and then I pivoted and I changed to being a trainer and I love it.

[01:28:01 - 01:28:48]
That's amazing. I've sent you an email I wanted to talk to you because I think we've done something that's really valuable to you and your clients. Someone that has an open conversation to see where we can help you and how we can actually get you more clients and improve the relationship that you have. I'm very curious right now what is everything that you're tracking with your customers like what's the process with your clients like what do you track what's your system for that like can you kind of give me a different answer yes well you're definitely gonna laugh because you're a tech person and because I was in tech but it's a lot of spreadsheets and so I track a lot of the workouts in spreadsheets I send it in spreadsheets I update it in my notes app I just I just have a different note for different clients that I have and so I update things there and so I

[01:28:48 - 01:29:38]
like review that um so you have like many spreadsheets or like everybody else yes yes to try to keep track of all my clients so everybody is in like one spreadsheet well i have i have many spreadsheets so they each have their own spreadsheet oh wow that must be pretty hard to map it is a little chaotic yeah and what are you tracking exactly also tracking calories or like yeah a lot of them the ones i want to track nutrition um i build them like a plan and they'll send me a picture of like what they're having and we estimate and give them feedback on like what they could change um and then we track like approximately what they're looking at for the week and what they're doing um and then we like track what they're able to like lift and change like over time where they're like um like mobility and things do you have any awareness of their kind of sleep recovery how they are actually doing physiology i do not okay how do you do you get

[01:29:38 - 01:30:00]
that data point somehow like do you speak with them before the practice like do you have at all this how they're feeling for the day and like map out their plan for what we're doing for the day. And then we go from there. So I guess if they're like feeling more tired, we change the workout. We like change the plan, but they'll like follow up if they're like

not getting a lot of sleep or

01:30:00 - 01:40:00

[01:30:00 - 01:30:45]
if they weren't able to do the other workouts that I've made for them in the week and then I put it in my spreadsheet. Do you wish there would be some type of solution where any of your customers you would have all of their morning recovery data in like a beautiful admin dashboard? How would that help me? Exactly. So you told me exactly like when you know somebody is like maybe sick or not recovered and now imagine you have all of these data points in the morning as soon as that person woke up you have those data points you don't have to ask them but also how do you trust that they actually give you a lot of good data points Some people have asked for more like coaching so maybe then I could offer like a more specialized coaching or something for them

[01:30:45 - 01:31:34]
if I have that data Or what if they actually don't know if they are recovered well A lot of people maybe they just assume what if you actually see their physiology would that be helpful? I feel like a lot of training is about trying things and seeing how people respond and this feels like something that would maybe be valuable to my practice. Yeah, because what we actually build is a technology that using any smartphone device in the world, you actually scan yourself as your client in the morning and you get your daily recovery score. So you can actually build a baseline of your customers and you see exactly how Victoria has been doing today Or if she's on her way to becoming maybe more sick, so maybe you should adjust her practices Maybe for more of my like holistic packages, I think some people are just like training

[01:31:34 - 01:32:22]
Packages and I think less valuable, but maybe for people who want like more support that should be interesting for her What about nutrition? Like do you actually how do you know that they're tracking their nutrition properly? how do you track the nutrition they send me a picture they send you a picture do you have it organized or like it's in a spreadsheet okay okay i imagine you have all of this data as well within your one dashboard sleep recovery score of them also exactly like a crm for all of my people exactly exactly all of their coaching yeah oh interesting okay a crm for trainers interesting What's our feedback? For me it sounded a bit like a demo, not like a discovery call. Because you tried to sell the product without a proper discovery.

[01:32:24 - 01:33:11]
That's what I did. What else? Yeah, I think you talked too much. I think you were nervous, so you talked a lot. I think people like also sometimes when they're nervous just like want to say all the things. Are you nervous? What? Are you nervous? No, I just talk. You're just enjoying the process. I just enjoy talking. But I think something would be helpful, right, if you were like trying, like when Justina talked about the user interviews, right, like I think you want to be careful not to guide the conversation. Like I felt like you were guiding me towards your solution instead of like finding my pain points and then like turning your, the like product that you have into how it could fit my problems. Right. Cause you were like trying to have me imagine how I could use that to do something better.

[01:33:11 - 01:33:56]
And so I think identifying more of like the pain points that I have in time to those is really important. This felt more like customer interviewee where you're like trying to understand like and find more things out. than like a discovery because we were like looking at the scorecard of like did you find the urgency or the pain point for me or the timeline or like any of those things like not really right but we did have like a conversation which is more interviewing. So that's what I would like practice to think about or think about how you differentiate them and like in which situation you do which. Yeah? But good job. Good job. I know it's hard to see. You did amazing. Come on. This is the core of what you said about like, in the universe of discovery. So what's the core thing that I'm doing is discovery that I'm not doing?

[01:33:57 - 01:34:41]
In the discovery, right, we're seeing is there like a budget is, right, or banned, right? Are you the person making a decision? Do you have a problem that you want to solve right now? And do you have a timeline that you want to fix it, right? And then am I, and then are we deciding yes, and we're going to have a next step and move forward together. An interview is, I'm just going to ask you a bunch of questions about things with no, like, next step or no agenda. I'm just learning to understand, right? And that's what that was more, right? It was more like learning to understand, which is what you guys need to do with the trainers anyway, right? But, like, the discovery is, like, is more structured. It's like

there's, I need to find these things. They need to think that I'm a good fit. And then we need to move forward together. I need to, like, kick them out of the way and work on my pipeline, right?

[01:34:42 - 01:35:27]
Yes. Okay, but good. which is really great. So you are after sales director of importer who is bringing motorcycles to France. You are based in France. You have different portfolio. You are flooded with the questions from dealers and you are managing them. You're answering phone, emails. All the dealers are buying from you. Yeah, they are buying from you but you are more on support. You're only responsible for training and all this. How many people do I have supporting? Three? Okay. Maybe even less. Okay, great. Perfect. Thank you for your time, Leanne. Let me introduce SimConkeys. In SimConkeys we help importers like you

[01:35:27 - 01:36:16]
to grow in Europe. And we typically do for customers like you the workflow starting from organizational translations to building their knowledge base and training for your dealers. to solve the knowledge transfer issue. So as I understand in our last exchange in LinkedIn, you are having similar problems of passing the technical knowledge to your dealers. Can you give me more details today and for the call, my agenda proposal, my proposal, I missed this part, and my proposal for agenda today would be to listen to you, to understand how, what is your current challenge, how you see you can solve it today and what is your timeline? Yeah you know I have so many I have so many problems and so many things I'm trying to solve.

[01:36:17 - 01:37:05]
A lot of my sales reps are actually having a really hard time selling to the dealerships and I'm trying to navigate like how I can align their commissions. I'm like expanding to a new market and so like that's actually probably my biggest problem right now. Expanding new markets? Can you give me more details? What markets are you thinking about? I'm thinking about Spain and Portugal. What is your biggest priority in three months for you and yourself? Is it green enough? Oh, our biggest priority in terms of space? You know, I was like starting to interview people and I really want to find, if I find people who have sold to that space before, that can sell the dealerships, like that's where I'll go first. So right now, no priority between the two. I think it'll depend on who I find to hire.

[01:37:05 - 01:37:54]
Do you have dealers there already? No, not yet. How do you see the process when you start the launch in Spain? How would it typically go? What would be the process of the launch after you find a dealer? Yeah, are you asking how we've done it in other countries? I mean, so I guess our launch in Germany. Yeah, but that's not a new market, that's my main market. The new market like that we launched recently with Germany and then that was like that was relatively easy the dealers were responsible for a lot of the materials and getting things set up we did have to do some more support for them we had set up a couple trainings which maybe we'll do going forward but is that something that you do a lot of like would you be able to take over and do those

[01:37:54 - 01:38:43]
trainings for launches we typically do these trainings and launches but i don't do your own to set up the whole process from translations of documentation for these German dealers, but also they have a system of answers to them and then the same answers and translations would be the base for the trainers. So how do you usually help people like me? We work with different scenarios in case of your priorities, and I see your priorities in Spain and Portugal, you need to launch quickly and onboard your dealers with all typically we would start with the most urgent priority issues and those would be the translations to native languages

[01:38:43 - 01:39:31]
which is a compliance map. In Spain you have to have this communication in Spanish. If we usually launch in three months, what do you call this launch in a month? That's the part of our phenomenal onboarding. We typically set up the system for you that's up and running for your dealers within one month from starting working with us. And we send our team there on the field to interview your dealers and to give the value to both to your dealers and to you within a time frame of 20 days. Okay, interesting. So you could help us if we wanted to go to Spain and Portugal. Do you also help us find the dealers? This is not typically what we do at least in the beginning stage. Can I come back to your current priority?

[01:39:32 - 01:39:58]
So what is not ideal in your current practice? So you mentioned that you started in Germany and your priority in Spain. What do you want to change? I don't know, everything. I love your suggestions on how you work with other people

and how we can make our team more effective. If it would be more effective, what would you do with this time that would be... Well, right now I have to hire three people for each market that we're in, so I would hire a few people.

01:40:00 - 01:44:31

[01:40:00 - 01:40:43]
What is your timeline to do this hiring and to be more effective? Do you have some deadline in mind to set up the optimization project? Yeah I mean I guess like I'd like to launch it in the next year for Spain and Portugal and then for supporting our current market I mean I would like to be more effective starting tomorrow who wouldn't? Who doesn't want to be more effective? I mean it depends on what I'm trying to solve. I don't exactly know what parts I'm like you could help me with right now. Like what exactly could you help with? I can help you to understand how much inefficient time you spend and how many people do this work.

[01:40:45 - 01:41:31]
Okay pause, feedback. How did we do it? That was difficult, Riana. Yeah, yeah, I am difficult. Not every, but it's good to practice the difficult ones. But did you see how easy it was for me to ask you a lot of questions and turn the conversation on you? Yeah, at some point it was like, you will stop. Right? But someone, like a lot of you are selling to people who know how to do that and can turn the conversation on you like very easily, right? In governments, in enterprises, like if you're selling to a high level person, they're good at it, they do it often, And you need to practice being able to turn the conversation back around right even if you're like I'm happy to answer that question I would love to get into in a minute, but first it would help me if we talked about this like can I ask you about I didn't even notice how you

[01:41:34 - 01:42:22]
At the beginning also remember to like like you didn't have any small talk or like opening You just like jumped right in right and then monologue me for a minute And I was like, I don't even remember what he said because he said so many things all right I wanted to use time-wiseness. I do smallpox fusion. Yes, but also sometimes customers will come and be like, you said in the form that you want to help with this, and now you're asking about something completely different. And you'll be like, are these both problems you want to solve? Which one is more important? Tell me what you do. Like, here's what we do. We can help with this. Like, do you want to solve that? Yes or no? Right? Yeah, confirmation. Like, is I understood? And let me know. Yeah, of things, right? To align. depending on your market right you don't have to be so formal like like as you said on your

[01:42:22 - 01:43:11]
LinkedIn message you'd be like our conversation earlier you had mentioned this right you said that this was our priority this was a problem right is that still a problem for you like is that still what you want to talk about yes okay but do you see what I mean about like the practice being the most important part you can have good conversations right you can have good questions you can have good things that you want but if you can't like run the conversation and direct it to where you need to go to identify to have it or know how to like turn things around it's it's very hard for you to do a discovery call right it's part questions but part like practice and interacting with people okay so your homework is to practice right practice with some ICPs that are not really your ICPs right to do some things yes yes discovery calls and then be ready for your demos you're going to take the ICPs from what you've learned in the discovery call right for Thursday

[01:43:12 - 01:44:00]
We're going to go through, but I want you to think in mind of an ICP, right, that we're going to practice for the demo. Yes, on Thursday? Yeah, yeah. Problems, pain points, all the things, yes? If you want to practice more discovery calls, we can do it in office hours like this week or later in other weeks as well. If you have salespeople you want to practice with, if you have some discovery calls you record you want me to send and be like, I don't know, what do you think about this? Happy to do that too. Yes? Yes and yes. Okay, great. Thank you guys. Thank you. No, you're totally good. We are we are done I think Oh, I totally forgot I have a prompt library for you guys. I didn't even mention it yesterday

[01:44:00 - 01:44:14]
It's here if you've seen it in the link for different homework and different things you can use it or not use it up to you It's there and Okay, more surveys, their favorite. Feedback on sessions. Great. That was good on the sessions.
