All three session transcripts

Week 2 Day 3 - 30 September 2026

Automatic draft - check the recordings for exact quotations

All three recordings were processed locally. Speech recognition may mishear names, accents, room discussion or overlapping voices. This is not a fully human-verified verbatim record. Speaker identities are not assigned. The study guide interprets the content separately.

Total recording time: 03:32:45

Timestamps restart at zero for each recording. Use the session number as well as the time. Short speech segments are grouped into roughly 45-second paragraphs without rewriting recognized words. Individual TXT and SRT files provide finer timestamps.

Jump to a session

Session 1: Experiment prioritization and performance tracking - 02:29:44

GMT20260930-054641_Recording_1920x1080.mp4

Session 2: One-page strategy and the numbers game - 00:38:44

GMT20260930-081648_Recording_1920x1080.mp4

Session 3: Experiment-board workshop and questions - 00:24:16

GMT20260930-090559_Recording_1920x1080.mp4

Sections needing extra caution

Automatic recognition can mishear classroom questions, names and business terms. Session 1 after about 02:20 and Session 3 after about 00:10 contain repeated words and unclear background speech, not reliable lesson evidence. Session 2 after about 00:34 includes informal health/supplement discussion, not clinical evidence or recommendations; its closing homework instruction is retained. Check original recordings before quoting.

Unreadable character markers appear as ? in this PDF. The original TXT/JSON output is unchanged.

Session 1: Experiment prioritization and performance tracking

Source: GMT20260930-054641_Recording_1920x1080.mp4

Recording duration: 02:29:44. Times below are local to this recording.

00:00:00 - 00:10:00

[00:00:10 - 00:00:24]
I'm going to do more people day after day. Do you guys want to come closer? I don't know. I don't like mine.

[00:00:35 - 00:01:23]
All right, how is everyone doing? Day 8, right? What are the emotions from 1 to 8? What scale of positive emotions and negative emotions are you on? 11, 8. How was the biggest learning yesterday? So for me it was the biggest learning course about outreach messages that we try again and change a lot of things in our messaging and I think it would be really useful to have

[00:01:24 - 00:02:08]
I don't know, to have maybe some workshops or something like more about it because we all A lot of copyright in general? Maybe some, yeah, some copyright in there, maybe like different messaging, different, yeah Because we all use this channel and for us and for startups on the third stage it is the main channel get more links. Makes sense. I also encourage you, there is a company called ReallyGoodEmail.com and they have a database of emails and you can go per industry, per stage of the funnel and see what emails people have and how they convert. That's one. If you do research, there is 20 of

[00:02:09 - 00:02:57]
email examples for even B2B, SaaS, this and that. So just do a research also. The one is called reallygoodemails.com, but that means plenty of those. Like the one I've been using for a long time. But definitely there's plenty of those. So if you are looking for inspiration of what to write, how to write, what's the best tool? What's the subject like? So, right there's a research about everything. It's just a matter of you doing your research, which now is even a new research. Okay? Yeah, because I was hearing everywhere that all of which doesn't work. No, it doesn't work if you send the emails. For example, if you even research 10 best compelling or conversion based open rates, subject lines for the you will get a bunch of articles.

[00:02:57 - 00:03:42]
Why? Because a lot of companies are using this as a content to get you on board for their, I don't know, email writing services, right? Or even GetResponse and OmniSend, they had this content, they had a lot of case studies, because what is their strategy to get people on board? To educate them about email, and then email them, go and use the tool, right? OmniSend, Flavio, GetResponse, if you search through their database of content, there's plenty of information, how to write email, what to write, what's working, what's not. Okay, all right. What else are you doing yesterday? Qualification. Notification. Customer qualification. Quality. We were visiting out and each customer has that sort of

[00:03:43 - 00:04:27]
the qualification system. We were not contacted. We are spending the one resource to contact a salesperson. It doesn't make any sense. Okay, so you have a transaction right now? of what to change? We are thinking, yes. All right. I think personally it's good that we are in a good way forcing us to look at other business models and expanding the things we. And I think we had this there with us fun. And it's like I was exposed because I didn't know that ICP yet because it's like brand new. Having that exposure, really trying to understand that

[00:04:33 - 00:05:18]
and also obviously we had to talk about the strategy regarding how we should email and then a little about the strategy, we just need to see how it's done at a higher level. So that was really beneficial. But yeah, so just like really pushing yourself to open your mind to different possibilities and I think that's been really helpful for me personally. Okay, sounds good. I felt like there was a shape in the mindset when you were talking to leads. Before every credential lead was, the target was just to do the demo. And now I realize that the target is not to do the demo, but to make him deserve this demo.

[00:05:18 - 00:06:05]
And I mentioned to those who deserve. The second one was to manage the conversation and I saw how the animal was managing me. Before I had this mindset to serve the customer and to answer as many questions asking about that. And in conversations with you just you know I also wrote it down not only to manage but to own it. So we still are very well. Related to discovery calls based on yesterday's discussion, we recorded all these kind of discussions. I heard two of them and I said that that's not a discovery call, it was still a pitch. So listen more. It was still a pitch.

[00:06:05 - 00:06:50]
So like during the customer discovery call, we are still trying to push our product, not asking questions, but like seeing something instead of listening what they are seeing. How can you actually start listening to recordings to learn from it? That's amazing. Yes, that's great. Well, getting feedback, so yeah. Okay, cool. I listen because if you listen, that's a big difference. The voice is hard. It takes more time, but you get more insight. few of them it's much better because then you can feel that you're going to be able to go like for example with some AI like it's also what you have to do

[00:06:50 - 00:07:36]
as well for example you also think that you're not just looking at your hands and your posture yeah we'll be doing this a lot in the last case how about challenges like challenges about yesterday workshop or in general What are the challenges that you're still facing? Are you facing the other solution? Or are you facing what you have not yet to do with it? Where are you doing this? I think I jumped super confident yesterday. Here when the first was to do the discovery call thing. And then I had like five holes in a row. And I thought, oh, I'm going to test it. And for me, so what happened, like they failed all the stitches, like all five of them.

[00:07:37 - 00:08:22]
I was doing something that I thought I could do without any preparation whatsoever just changing my immediate there on the go that I was relying a lot on my alleged arrogance of the sales person or whatever and the German customer like they jumped with their biggest boss the biggest boss is going to get this for 3 minutes because I started questioning them next call two quiet mouses jump in with all respect to them but no decision makers, nothing just curious about who's I start questioning they cannot give me an answer any specification level doesn't work

[00:08:23 - 00:09:11]
So for me, the sort of like major relation that I work with, I thought this is how first stuff helps to find time to, you know, somehow write it out like later, write points, what exactly is it that's trying to prove? And sometimes you forget, like, especially when you're like doing so hard work, like alone, alone, alone, especially the sales stuff and marketing stuff, like numbers. Luckily my tool saved me. So you do an action on that already? On how to plan, how to change, like before you bet on the next post you don't repeat this,

[00:09:11 - 00:09:55]
you have a plan of action? Yes, for sure. like uh so i did say that one automation there is more than one version of the call because this is when it becomes this is when they feel a bit more arrogant and more no i'm saying more from the conversation perspective commission to automation what you said like the conversation you didn't plan you were just like i was going to get in flow with it right so like again plan conversation what exactly what are the five scenarios that I can go to a level of SA in the right. All right. I think the industry is important for you. We have seen speak of questions, but identity, if it was just questions, it would be awkward.

[00:09:58 - 00:10:00]
And we need to practice

00:10:00 - 00:20:00

[00:10:00 - 00:10:45]
more, how to make it less formal, more interactive, but sound like conversation, but not really just conversation. Did you think it was much different, right? You saw the questions, it felt like everyone looked like got this, not what a discover calls, and then everyone that went out was like, oh no, because you immediately went to pitching your product, right, talking about yourselves, talking about things, and then trying to get questions, but it was really easy to get turned around on me, right? One thing that was really tough for me is using the process. So even my conversations, like, I've tested already, like, letting customers know when to push you to say, look, I understand that the process is a great thing to say. Because everyone needs to accept it. It's like if it's professional.

[00:10:45 - 00:11:31]
And it actually brought over to the customer who was, like, really taking this apart and then, like, look, this is the process and they accept it. And it's not a push trick anymore. because they won't professionally test it's a very powerful class. All right, so today is one of the most important sessions as well, not the program but in general, so what to experiment, how to experiment, how to get into that mindset, because the next eight weeks the goal is for you to leave this room today or on Friday with 100 experience, and put into the process and then go into implementation. This morning I had a call to one of my other

[00:11:31 - 00:12:16]
startup provision program and I pushed you to implement a quiz on top of the final to validate the program. He got seven visits, four signups, three jobs. So it's a small number but it just shows you the power of of experimentation and it's looking like an alternative so I will keep the third class the master of experimentation I would like to share today's agenda we will have session and workshop for Nicholas about experimentation and we also have lunch and learn from Justina about one page strategy

[00:12:17 - 00:12:33]
but before we move to the sessions please come this cure for the morning energizer please do me right now right now and we want to hear feedback your thoughts are reading just one minute

[00:12:50 - 00:12:51]
Yeah.

[00:13:19 - 00:13:20]
Thank you.

[00:13:59 - 00:14:02]
Thank you.

[00:14:17 - 00:15:03]
You know what I always do before I start the session? Ah, some movement. Let's do some movement. Just a quick movement. Quick movement. Sorry, you guys are tight. Tight to tight. Straight to straight to. So I really, really move. By the way I will have a quiz, not a quiz, I will answer a question by the end of this session. The question is this, why do we need to move before we start the session? I know you guys already have some answers but go through the session, maybe you have

[00:15:03 - 00:15:06]
different thoughts. I want to hear why you do that.

[00:15:16 - 00:15:59]
Hands up. Right. Yuri is pumped up. Yuri is ready for today. Everybody has to go. I'm not letting you go. You don't move. Everybody has to go. Stand up. You're still waiting for some people here. Come on. Oh, okay. You're still waiting. Finish waiting and then come. Nicholas, I see you're still waiting. Twist. Twist. Right, jump.

[00:16:05 - 00:16:48]
Alright, what do you want? Dimitri is like dancing. Alright, my favorite, squat. Did you squat properly? Squat. There we go. Nima is amazing. Look at his squat. Look at how beautiful it is. You guys know how to squat. It's amazing. A lot of people don't squat well. Squat or jumps? Squat. Squat. You guys are amazing. I'm dull for some shit. Victor, what are you doing? You're live streaming it? 500 Eurasia program, part of it is doing squats. I love you man.

[00:16:50 - 00:17:39]
Okay. Alright, we're good. Yeah, let's go. Okay, let's go straight to it. Alright, next. You guys ready for today? It's going to be fun. I spent multiple badges trying to refine this and I think it came to a point where it's super fun and goes to the people's training. I think it's super engaging. So okay, I want to involve you like usual question challenge whatever okay, I accept that and I'll answer your questions. Okay, today's my presentation is all about experimentation. When you think about experimentation, what do you think about?

[00:17:39 - 00:18:24]
Just my favorite part of the business. Your favorite part of the business? Okay, why? How do you feel about it? When you get big results, how do you feel about it? For those who are on your laptop, if you are still waiting, I'll let you go. But if you're not waiting, I will have you listen up. because as usual the things that I thought is all by implementation.

I'm not here to teach you theory. There's no use of theory. I mean that you can listen to any theory, you can get anywhere, but it needs all by implementation. So I want you to listen to that, okay?

[00:18:25 - 00:19:17]
Anything else? Why do you guys experiment? What do you think about experiment? What do you think about? Okay. Inconference in the product. Inconference in the product? Only the product? keep a solution keep a solution okay for me it's not race when you compete with your runway and you need to do a lot of experiments as fast as possible because as I said you are competing with your runway and like I don't know sooner you get your get closer to your market fit, having your runway, the better for you and if you do not do a lot of experiments fast

[00:19:18 - 00:19:58]
with good preparation and analytics, so it means that you could just run off the market Okay sounds good. Wait. Val, I want you to go there and then you do star jump ten times. Do what? Star jump ten times. Okay. It's not a punishment. It's also a punishment. No, no, no. They have already done it. And they have push ups. I didn't say push ups. Val, everybody has done it. I want to activate your ring. It's not a punishment. Yeah, just jump ten times when you need to. I'll get back. Yeah. I have to do it. Did you jump?

00:20:00 - 00:30:00

[00:20:00 - 00:20:50]
I had a deep jump for coal. Okay, tell me more. Okay, let's come back. Who first? Eric first. Let's find better ways to go to business, marketing. Test, validate, experiment, agency testing, trying to find the best ways. I want you guys to listen to your peers what they talk about in a section because when I give my answer I'm thinking everything in a way that I think we should be remembering this for the rest of your life. This section won't happen once. I don't know if anybody does experimentation section or talks like this but if it goes

[00:20:50 - 00:21:35]
your mind, it will be revising your experiences. Even for personal life. I would say learning to fail. Learning to fail? Yes. How do you feel when you fail? It's okay. It's okay? It doesn't feel good. It doesn't feel good. But how do you feel like, terrible, sad, pissed off? No. It's part of the process. It's part of the process. How do you feel? How could you do afterwards? Afterwards or afterwards? How could you do afterwards? I would say for me it's a tool for finding the correct solution to your place to this uncertainty. Okay, sounds good.

[00:21:36 - 00:22:22]
Now we go to the next, this is the million dollar question. How do you know in 5 to 10 minutes whether or not your team are solving the right problem? Think about this. If you feel okay, if you don't feel okay. Think about this first. This is a question that I start my presentation with. This is an important question. I'm handling you the skills to go into any business and be able to run an optimist business in your universe. So let me ask again. How do you know, if you go to any business, how do you know within 5 to 10 minutes whether or not your team are solving the right problems? How do you know? In the best. In the best. Just 5 to 10 minutes. any teams, any companies in the world, they hire you to solve their business problems. They want to grow, they want to reduce your own, they want to like, speak about it, whatever.

[00:22:22 - 00:23:09]
How do you know in 5 to 10 minutes, without talking too much of it, that they are solving the right problem? So we don't see any results because lunch has a lie in 10 minutes? Yeah, 5 to 10. You don't see any results. You know whether or not they're solving the right problem. By the way, this answer leads back to my previous presentation. Go. That's a lot. I know you guys are super engaging. We'll go back. We'll go with you first. Well, we have to get the clue from you before. When you don't change how you do stuff, but you continue to try to solve the problem, perhaps you are not doing the right thing, so you need to experiment. And if teams didn't experiment, perhaps they don't solve that problem.

[00:23:10 - 00:23:57]
You will never know. Sorry to interrupt, but I think the question is, if you are a consultant, business owner, whatever, you go into any teams and companies, how do you know within 5 to 10 minutes that that team is solving the right problem? If you try to grow that business, your business is already going to be a business, 5 to 10 minutes, how do you know if they are solving the right problem? How do you think about that? If they have tools to target client problems, so basically if they do experimentation, if they have a parameterization framework, stuff like that, if they

have doing that problem they do. Almost there, I want to more specific, but almost there, you're probably 7, 8 years out there. Yeah, but that's how many experiments they ran, and what learning they have had for itself.

[00:23:57 - 00:24:45]
Go ahead, anyone else? Last one. Can you understand that they're big declining? Third, they're big declining, they're big more. That is the language indicator. Right now, you go in there, it's like, how do I know if you're doing something right now? Do you want to give an answer right now? What did David say? What was David's answer? David's answer, David was answer. They have tools to approach problem coding, like experimentation and verification papers. Almost there, I'll give you the answer. I think that is an important one besides the experiments, like understanding everything It depends on the big feature, why the abdomen is just experimenting.

[00:24:46 - 00:25:31]
That's really good. When I go to any teams and they say, Nick, I want you to deliver these results for you. The very first thing that I look at is, one, do they have tools to document the experiments? What do you say? What is that for? It could be a project management tool, it could be a spreadsheet. Most people don't have it. and a lot of growth companies don't have it. Surprise! That's one. When you don't have tools to do that what happens? You are blind. You don't have anything to govern it. The word is governed. You don't have anything to govern the workflow. The next thing is if they have a tool, are they populating the tool with a list of experiments?

[00:25:31 - 00:26:22]
That's how I know whether or not they can get to the results that they want. because we go back to the first presentation which is matrix. Matrix, it can be leading indicator, it can be lagging indicator. Remember leading versus lagging? Leading versus lagging in that context we talked about numbers, right? This is lagging, this is revenue, leading is probably getting more needs. But the same concept, if you step out and you have to think about it, in your operations, you can also have leading versus lagging. in your operations you're lagging it's actually the numbers that you're trying to go to so for example your revenue or the needs etc but you don't you're not going to get there it's the same concept you're not going to get there in the meantime what do you control what you control is your operations you can know today right now and tomorrow exactly what things you have planned in

[00:26:22 - 00:27:10]
your workflow that you feel that these things are the best that you're taking that's going to get to the numbers that you want. Most people don't think about this. They just do. And we talk about experiment. The idea of experiment said, oh, let me try this thing, let me try that thing, let me try this thing, let me try that thing. It's not that simple. The more advanced way is you look at the list of experiments, assuming you populated the experiments, you pair it with your matrix, okay? So this is the goal you try to hit, but you start asking the question to hit that goal, what are the things that I need to ignore? That's the first question not what are the things I need to do it's what are the things I need to do okay what things I need to eliminate that's the first thing it's not what the things I need to add in it's eliminate so you come to this accelerator you also will join in the accelerator and you will have

[00:27:10 - 00:28:00]
advisors you have boards you have everybody the problem with our age right now is actually not information the problem with our age is selection of information so the first step is actually elimination. You have a target, that means that you need to work towards that target. You have humongous amount of information and advice. The first thing is you cut. I cut first. I cut off all the noise that is now related to the target. The next thing is I start populating the tool with a list of experiments. Okay, now how do you see experiment? This is how I see. Experiment is not experiment. Experiment is just like, okay, experiment in most of your minds that this is a target amazing i'm gonna try this now experimentation to me i'm gonna give you a different read for it experiments to me is a bet okay it's a bet it's a bet b-e-t

[00:28:01 - 00:28:51]
gambling i mean i don't use the vocabulary experiment to me is a bet remember what is the role of a founder that we talked about in the first session the two things Game learning displays a bit and allocate resources. Your job is to allocate resources at the top. Even if you don't have team members, even if you only have yourself, you still need to allocate because you have your own time and money. That's how you can possibly. So when you look at experiments, for a lot of people, they look at you and say, ah, I have a board, I have a list of things, I'm experimenting. I'm like great, it looks perfect. You go to any consultants, you go to any people that are going to give you advice, like you're on the right track. It's not that simple. You've got to go a little bit deeper and say, I have 10 experiments, which means I have 10 bets that I'm making.

[00:28:51 - 00:29:37]
80-20 rule. Which of the bets I'm taking that I think is going to bring me forward in the next two weeks or three weeks or four weeks. So you have short term, big, and long term bets, and then you have mid term, long term bets that you're going to take. So your job is to basically reshuffle the best according to the new information that comes in for you to make the best decision at that end of time to move yourself forward. So you will have a list of experiments that you're going to do, that will be a thousand lists, you want to do a lot of things. And I work closely with top CEOs and they're all like, I want it done yesterday. I'm like, it's not going to get done yesterday, it's the reality. But people want to get this done yesterday. But you only have that amount of capacity. yourself, your team, whatever, you always have a list of things that you want to do

[00:29:37 - 00:29:59]
which that list will ever grow, will forever grow, but your capacity won't. The only way you can grow your capacity is to grow your team. You should find a resource, which is money. Right? So the smarter way is given the resources that you have right now, and by the way, you will never have enough resources regardless of your life revenue or your bank account. You've never had enough resources. The skill set you want to

00:30:00 - 00:40:00

[00:30:00 - 00:30:48]
develop is to learn how to make bets. How do you make bets? We'll talk more about it. Okay? So coming back to this question. Five to ten minutes, the way I, at least the way that I know best is I go there. Most people don't have a tool. They govern the experiment. Second, even if they have a tool, they don't have the solutions how to solve this problem. Third level, even if they have a solution, they have a list of experiments that they do, but they do not know how to prioritize the 80 point. So experiment is critical, how you remind things of it is also critical, and that's the key. I'll talk to you guys more about how I do that, and also remember the case that I presented, I think last week, I did three years ago. Yeah, I'll show you

[00:30:48 - 00:31:39]
different lens how the mindset was when I push that from it. Next, why even bother experimenting? You guys already have a mindset, why bother? Why? I guess it's for me like you come back to the previous presentation, it's got that validation as well. Like if you are to stop pushing money onto the wrong things, you're losing money. Done, that's correct. Anyone else? I don't want the same suspect. We're always at the same guys answering. What is the sense of speed? Maybe we are going with the right speed. It will be faster. Speed and momentum is one of the keys. So if we look at growth, this is the chart.

[00:31:40 - 00:32:31]
Please don't mind the way I design it. I need you to like to design this. but what people think growth is is that if they want to go from A to B it's just one straight line okay and timeline is whenever which means they don't have a timeline of where they want to go A to B this is what most people think growth is actually this okay it will go up it will go down it will go down more than you go up but by the time you go up okay most likely when you go up just can be a little bit. Sometimes can be big, sometimes just can be a little bit. I always use this analogy where this is all, this is like muscle building. You're stressing the body for very little growth. It doesn't make sense at all. In a muscle building world

[00:32:31 - 00:33:16]
like Kampo, there's an article that says that if you try to do this you are partially not really spark very insane because they're giving a lot of resources back to your body for very little growth very little it's very hard to put muscle but you're breaking everything down on your body okay but the same thing applies in business as well in the early stage you're doing a lot you're not receiving salary you are hustling you're joining an accelerated program you're getting In some investments, you still need to do a little growth in the beginning. In hopes that the growth will come later on as you can count. Make sense? So growth is really like this. You will fail most of the time, but when you win, hopefully you will win very big.

[00:33:17 - 00:34:02]
And that big win is going to cover back all the growth that you've done. Another analogy is basically that you look at your conversion rate. Your conversion rate will never be 100%. you will always need 5, 4, 3, whatever depending on the business model. But the 3 to 4, 5, 1% even is going to cover back the revenue that you spend on people that you don't cover. Make sense so far? In, I'm showing you another view. This is a backlog view. Okay, so the first question I

ask is like how do you know in 5 to 10 minutes that people that you know whether or not they're solving the right problem? Backlog view is your tool. To go to any teams and you see the sun, the emotions, whatever.

[00:34:03 - 00:34:49]
If they don't have a backlog, they don't have bats. When you don't have bats, it's hard for you to grow because you don't know why you're growing first. When you don't know why you're growing, you don't know what to double down. I'll give you an example. I took on the recent climb. growth stage, big teams, doing well in the past a lot of years suddenly revenue tank. Suddenly revenue tank. And the cash reserve has been demoted by half. So they say, Dean I want to talk to you. I'm not sure. So the first thing I ask is, why did you revenue tank? They're like, I don't know. So we spent two hours and they have hypotheses, they presented the slides, They have big slides.

[00:34:49 - 00:35:36]
Their whole team, by the way, the whole leadership team was like, these are possible reasons. I sat down with them, asked a good question. Turned out none of the reasons that they did sit down is the reason they tank. The regular tank. What does it tell you? I'll answer it because that's in my context. They do not know exactly what is the thing, the exact number and the lever that causes the regular tank. Also at the same time, they don't track the pin-el at all. They look at the pin-el, there's no process to make sure. Can I do forward planning? Okay, can I say my cash is here right now, in the next few months, I want to double my cash reserve. They don't have forward planning. Okay, so they don't have it, so they don't know. What that means is that they do not know

[00:35:36 - 00:36:21]
what are the levers that's gonna go in the business. They're not clear about it. When you're not clear about it, you don't know. when you don't know you're winning right it's just luck you're winning so luck will run out just like that we run out to a certain point then you do not know what's optimized so they need to bring in some extra expertise and look at it and like yeah these are the levers these are what we need to work through so what we did is that we identified the levers we set all the targets the things that we talked about last week everything now has a big target and then we have the one metric that matters. In this case, we say your cash reserve is $4 million right now. For example, I want to double the cash reserve in the next 90 days. These are things that we need to do. And these are teams that are going to do it. And this is your chart.

[00:36:21 - 00:37:05]
I'm thinking back to last week's presentation. This is not absolutely relevant. I think in the first session I mentioned my presentation is being consistent, but it's being presented separately. So if you have a question how this leads to another thing or how it leads to other presentation then you know I'll answer your question. So if you look at the backlog view, this is what I'm looking at. If they, for most people, they only have this or they don't have this at all. So within five minutes I'm like, yeah, this thing is gonna fail because you don't know what to double down, you don't know what counts yourself. What you want to do is basically this view, you need to have a backlog. Okay, some of you has already opened up your major tracking spreadsheet, some of you has already populated the X-Men spreadsheet. If you don't have X-Men, you're ringing every single day

[00:37:07 - 00:37:53]
comes here I'm gonna take it, I'm gonna take it, I'm gonna take it, I'm gonna take it, take what comes in your way but you also need to have a full plan because you're like okay I have this right now but what am I looking for tools, it's two different things. Is it gonna be black and white? No. Is it gonna be straightforward? No. Is it gonna be hard? Yes. You're gonna balance it out every day. You should walk right at the chest. Okay, what is the key here when you look at this, what is the key here? What is it that we are trying to achieve with that? Clarity. To know what actions lead, where is the ability to resource. That's clarity. What else? Your behavior, just the way you approach.

[00:37:53 - 00:38:42]
Approach, okay, take that. Anything else? I think I should do, by the way I usually have four presentations but this time I have three but you guys know I get first squeeze in one hour to talk about how to do performance. Okay, the key here is this, this process. I'm going to summarize it for you guys. Key is two things. One, volume of tests with the right test, quality and quantity. Lineup, never stop. Second thing, speed. I'll test it. So this is what it looks like. Most people are at the top. This is how most people test.

[00:38:42 - 00:39:31]
they have an idea the decision-making is either I choose A or I choose B idea. Pay attention when you make a decision pay attention when other people make a decision. Given an idea they try to choose A and B. Okay and then

they start testing it and then they see results. For most people they stop at decision stage they don't test. Agree? For most people, honestly, let's be honest, they have an idea, they try to choose the idea, they think they're prioritizing, and then that's it. That's why they don't have a back up, that's why they don't have a tool. Agree? Yes. But what is reality is basically at the bottom. Your ideation state is there, the decision shouldn't be or at every single time, it should be end, but align it differently.

[00:39:31 - 00:40:00]
So you have I did A and I did B. What's your life? So I go with A, I'm sure I go with B. That's another option, which is I go with A and B, but I go with A first and B. It's a different logic. That means that sometimes you don't have to choose A or B. You're telling your brain that you have to choose the one. You can choose both, but execute a different timeline. Then you test both out. And then you start testing. And once you test, the last one is results versus post

00:40:00 - 00:50:00

[00:40:00 - 00:40:42]
-mortem. So you test, then you get some results. Then what you do is that you sit down with your team and you do that. Has these tests failed? What's the numbers that we're looking at? And if it is successful, ask this question, what's the insight there? What are we trying to do? What worked? If it failed, ask the question, why did it fail? Can we optimize it? Or do we need to discard the idea after that? Now, another real life situation. A lot of things I go to, that work with them, the moment a test fails, they tell you, Nick, fail. That's what I'm going to say now. What happens when you do this a thousand times? What happens?

[00:40:46 - 00:41:34]
I mean, I'll be clear. He comes to me, he runs the test, this test has failed. Push up. You make less decisions. No, they say, this test has failed. And then they say, push up. That's it. What is wrong with this thinking? what's wrong with this mindset why is this failure no no no why they they come to me they say hey i run a test yeah i failed yeah and they stopped it they start there already what is wrong with this mindset short why short-term thinking why why i don't know their story look we don't need the

[00:41:34 - 00:42:27]
story we talk about the mindset they do a test they fail they come to me say they failed and What is wrong with this mindset? Have a think about this because I'm pretty sure some of you or some of you you would have this mindset so I want to debunk this in this session. So when you pause, when you go back, you're like actually this mindset will work for me. I need a different approach. First, should be not that it failed but what happened, what were the results, what we saw, what we learned. It's well considered context. Sorry? Well considered context. Context is always changing. Yep. On point and on point. What else? I mean, what was the thing failed? Our original assumption was bad, so like the original idea should we start getting to the result or how we proceed?

[00:42:28 - 00:43:14]
That was something that we need to change. So like you need to define what was the thing failed and based on that we do it. All of you are correct. The problem with that mindset, I'll tell you guys straight up as honest as possible. And if you still do this in office hours, I would challenge you, or the mentor should challenge you, that actually this is not helping you. I'm going to digress a little bit. This is what I discovered when I worked with a lot of people, and at me as well. One of the biggest things for us to go from A to B in life, regardless of business or in life, or in health, in relationship, human beings tend to self-subotage. That's what? Human beings tend to self-subotage. Hmm. Now, you can argue, some of my friends argue with me.

[00:43:14 - 00:44:03]
Do you believe in the idea of self-subotage or what? I'm not going to argue with you. But what I'm saying is people that go from A to B as quickly as possible, they have less tendency of trying to judge a situation and make a conclusion too quickly. That's stopping them from the way to want to get better. Okay? If you for example go tell people, hey actually I can help you to do ABCD, your pitch, your time, you know that it's going to work, but they say no to you. Sometimes it's luck, sometimes it's timing, sometimes it's the way you pitch, but one thing that you cannot control is that people have certain limiting, limiting in mind that they say this is not going to work before they even speak to you. You can't control them, but what you can do is that you yourself can control them. What that means is that if you want to go from A to B in any areas of your life,

[00:44:03 - 00:44:44]
one thing that you need to be super aware of is, I'll ask myself this question, am I stopping myself from proceeding just because it's not a problem? I'll repeat, if I try to go from A to B and I'm not getting there, I'll start asking myself what is it I'm thinking that is sabotaging myself that's stopping me from going from A to B there must be a certain no-pop that I put on myself right either I say this thing don't work but I don't believe in it or I won't do it in that person okay I'm talking about like one experiment or I'm talking about mindset how do we do that

[00:44:51 - 00:45:36]
So, have a think about this, this influence how you approach your business. And there's one guy that says something along this line and I think it makes sense. The growth of your business is directly proportionally linked to the self-limiting belief that you have. What it means is that the more self-delivering that you have, the growth of the business will reflect that it's not your growth. Which is crazy because if you think about it, it makes total sense. Because the growth is a light indicator, your mindset is a leading indicator. So coming back to this, for most people, I would say they stopped here already. If you want to proceed faster, you have to go through the whole process. I'm going to tell you straight up, it's a lot of discipline to go through the process.

[00:45:36 - 00:46:22]
Even some of the biggest companies that are team, successful, a lot of money, they will test but they will never do results and force more. So when I ask them, let's say, Atila, you have run this test, tell me about the test. The first thing you will say, ah, this test I have tested, this is A, 1 versus B, by 100% confidence, and A has a least of conversion by 20%. That's why they would tell me. Then I asked the next question, Atila, what is the insight that you derived from it? Most of the time it's scientific because they didn't think about it. Result is one thing, insight is another thing. What is the insight that you've learned from this?

[00:46:22 - 00:47:13]
Because you have already paid, you have already gotten the team to give you the experiment. And you have already won. What's the insight? If you don't think about insights, what happens? If you don't think about insights what happens? Any thoughts? If you don't think about insights what happens? Let's say one in the context of reading. Let's say the test one. If you don't think about insights what happens? You don't know why it works. You don't know why I don't have hands? I think the output of the experiment that was done should be ready for the next one. So if you don't look at the results, you basically lower the quality of your ideation stages.

[00:47:15 - 00:48:00]
Spot on. In one word, if you don't think about insights or you don't analyze the insights, assuming the test has already won, there's no way for you to double down. that's the keyword double down cheaply i'll give you another real life day study the client i was just talking about last year at one of the biggest time of the year they completely bombed the revenue the year before last year the same time the revenue it has gone up okay 2024 that period of time the They're happy, I cashed in the bank. Last year, it goes down. So when I asked them this year, what we tried to do is that we don't want to take too much risk.

[00:48:00 - 00:48:47]
We still want to make money. The best way to do that is to gobble down what works. So tell me what has worked in 2020 before. They have a team of few leadership people. None of us can tell me what happened in 2020 before. So coming back to David's answer, if you don't derive insights and documented insights in Jesus, there's no way for your doubt now. So what you end up is every single year and every single month, you are reinventing the wheel. And if you think about it from a math perspective, reinventing the wheel is expensive. Why would you want to pay for the same lessons 10 times, when you only need to pay once and bring the profit and have the same lesson as mine. You guys follow me? Am I going too technical?

[00:48:48 - 00:49:34]
No. So these are real life stuff. I'm not kidding you. I'm not ditching you clearly. So they can't tell me. So then this year we have to take a different type of risk. Sometimes we need to ask a question, can you afford that risk because your cash is okay but it's not amazing. but if you're doing it, the catchment will be depleted. But you're getting a target, you want to double the catch result, right? So these are the line-in-line decisions that you can think about. Most people don't do postmodern when they win, they don't do postmodern when they lose. And what's the cost of that? If you're doing this experiment for the sake of living experiment. Okay? This is super important for you guys because you are allocating resources.

[00:49:35 - 00:50:00]
this is going to go to a whole process. Later on you found out, I'm running out of cash. You don't know why. But cash, again, is a light indicator. It's a lead indicator of what you do right now that matters, and it leads to that. So you've got to pay attention to your workflow right now. When people tell me certain ideas, by the way, I get ideas from different sources. Everybody gets ideas from different sources. But when people tell

00:50:00 - 01:00:00

[00:50:00 - 00:50:46]
me different ideas, I'm pretty sure you experienced it in an office hour. Ah, he will think about this, he will think about that. Well, it brings her a bit more well, but at one point I stop. Alright, line it up, it's just an experiment. So to me, it doesn't really matter if the idea is valid or not valid. We use ideas as an inspiration and then we weigh the idea, see if it makes sense, which is part of the filter, and then we line it up and then we move. That's how. Because most people will stop here. But the actual fact is this one. The loop is dead. It's not easy. Okay? Any thoughts so far? I think the most difficult one is how should you be able to do that?

[00:50:50 - 00:51:40]
I will summarize it for you. One, a solid target which is the one major that matters. When I say solid, I mean in every single composition you have with your team member every single week, there's only one question that you ask. This is the target that we define. We want to get 15 pilots done. Every week I ask, are we first? Are we there yet? No? what is it that we're going to do this route to get there what do we need to try this way that's all anything else I don't care why it's simple that's why you have a target it's a narrow down your workflow you're not going to do everything you're going to do something at least there with your limited resources that's life okay another thing again we can't teach you we can only go through it with you

[00:51:40 - 00:52:25]
which is why phase two we have a weekly check in where you report the targets and things that you do. That's discipline. The structure is there, but it's hard to teach discipline. If a person doesn't, if a team doesn't have discipline, you need someone to come in and be the discipline guy. Either your mentor or either someone else consultant that you hire or it is yourself. If you have a tremendous amount of discipline, that person will be yourself. Remember in the first session, ask how many coaches do you have or like we got to go with coaches. is that you're paying to leverage these people to make sure you execute. Because information is cheap. When you're receiving information every single day, that execution is premium, it's expensive. So if you don't have this profile from your team and you're better to be super honest with yourself,

[00:52:25 - 00:53:11]
then you need to have a third party to be doing that. For example, I used to find it hard to hit my protein intake. I used to find it really hard because I don't have it. I'm not kidding. Sorry? No, no, keep kidding. It's fine. No, I need to try more. Yeah, I know. I need to try more. I need to try more. No, no, I need to try more for sure. That's always room for improvement. But I compare myself with the past, right? I used to find it really hard to hit. I just don't like me. So one of the things I like, accountability, how do I do that? So that pays someone, okay? And that person says, you pay me this spot on all money. All you have to do is every day send me a picture

[00:53:11 - 00:53:57]
of the food that you're taking. It's not even counting backwards. It's not even counting backwards. So I said, let's try it out. Did it. After that, slowly you build up the habits where actually you're trying to hit a certain intake without overly thinking, without overly thinking. So you're building habits by having other people hold you accountable. And you don't need to be perfect. AI will not succeed. AI gives you the information. Do you trust AI to hold you accountable? Will you hold AI accountable? You will hold AI accountable, but AI will hold you accountable. So it's very simple. I find someone that's going to hold me accountable. So what is that? I might be slow. For example, you might say, oh, you need to try out. I might be slow if I'm moving.

[00:53:57 - 00:54:44]
That's the whole point. You've just got to move. I just want to say this. I just . I follow Stephen Bartlett, the director of the CEO. He has full-time people whose job is to incentivize to bring failures of the SWIFT. And he's the biggest podcast in the world. That's a complete validation of what you talked about. And I have really, that really is part of a screenshot as well. How he has CEOs who like to go to the team and plays and come bring us failures every week

and the more you give us the better job you've done. Provided your team has an open mind, we would like to tell you about people that can't tolerate their failure. But it's a CRO, right? To build the culture so people feel comfortable.

[00:54:45 - 00:55:42]
Because the CEO has a common aspect of the world. As we talked about the growth of your company is in direct proportion to the growth of the CEO. If the CEO has limited belief or kept in the way that he thinks, your company is going to be kept. On a personal level, I'm going to tell you, for example, my family members and extended back to my person. I see when I was young, how the main person in the family, okay, if they think about things where they kept their potential, they say, this cannot be bad for my family. Everything else, everybody else in the family will be bad. It's sad. It's sad because you, your limiting belief is capping your family's potential. You should not. You should have an unlimited ceiling or a will to try things out even if it fails, just so if you fail, your family won't fail because they have different potential or they have different personalities.

[00:55:42 - 00:56:27]
So the job of a leader is not going to put a cap on this. Another thing is, everybody has their own potential and everybody has their own negative beliefs. You need to find someone that has different skills than you. That person's ceiling is higher than you. You might have a certain talent or you might not have a talent. For example, personally, I said I need him to work harder. Some people have physical gifts. I know, I need them, but it doesn't mean that I can't receive. But some people have, maybe they're like teenagers, whatever. Maybe everybody's like, oh, my dreams is way better than other people's, I can run over the field. I can't do it, but it doesn't mean I can't receive.

[00:56:28 - 00:57:15]
In business, it will be the same thing. You don't want to compare yourself with other people. You want to compare yourself today and yesterday and see what portfolio you have. Optimize, that's all. There's a mindset. Boom. Go to the next one. I talked about bets. There's few tips and tricks of how you increase the probability of your bets. How do you win? You guys are going to have access to this slide. So you list down 10 experiments. How do you make sure that experiments that you do can increase the probability of winning? Because again, capacity is not free. The first one is look for the low hanging fruit 80-20. Of all the list of experiments that you have, the first thing I'm going to ask is, which are the things that are in the back view right now?

[00:57:15 - 00:58:00]
The leg point wounds. Why quick wins? Because it's cheap. Quick wins might not be cheap. Quick wins might not be cheap. I mean if you are talking about long hanging food, it means that it's most like for low. And as for me, it's fast and fast means cheap. Fast only cheap, you can be expensive as you class. I'm looking for one keyword, why long hanging food? That keyword I've never done before. I think it's an ignite to start the process of acting. Ignition, momentum. Yes. If you guys are not listening, I think

[00:58:01 - 00:58:46]
before you start experimenting, a lot of people already fail because they don't understand the ignition. They don't understand the power of ignition. I'll talk about it in case study. How you use momentum to power advantage in driving performance. First one, 80-20, quick wins, momentum. Second one is to copy. I am not an innovative person. I know. I would read copy. I copy. You guys don't think I must be creative. Some of you are like, I don't think about this. I'm not. I'm not saying you shouldn't. I'm not. I'm honest with myself. I'm not a creative person. My completely no part is to copy. I'm a poet. Oh, that person has done this before.

[00:58:47 - 00:59:34]
what is it that he or she knows that I don't know that I can learn and pay money to copy from? Because I don't need to reinvent the idea, I just need to execute. There's one famous saying by the Singaporean government. They say this, none of the things that we know are the things we invented. We source the ideas from some of the best and brightest minds all around the world, bring it to the country and implement and execute everything. Take it into the context. Okay? You might be creative, do it. If you're not, copy and focus on execution. So to me, I don't come up with any ideas, I just copy. Oh, this person has done it. I'm going to copy and I'm going to put that into my context.

[00:59:34 - 01:00:00]
That's all. Okay? The third thing is you sequence the test. Okay? Okay, the question you need to ask if you have a list of 10 experiments. AB20 is the first layer, you're like okay, I narrowed down to 3. Okay, these are quick wins, that's going to give you the mindset. After that, you need to prioritize ABC. How do you sequence ABC? Which test should come in? Is it A first,

01:00:00 - 01:10:00

[01:00:00 - 01:00:46]
B first, or C first? Okay? Why do we do that? Why do we think about this? It could be B, C, A. It could be A, C, D. Why do we need a sequence of tests? You mean different tests? Do you have three tests? Yeah. Why do we need to sequence it? Let's say ABCs, why not resources? Resources is one of them. I'm looking for something else. Sorry. But that's your result. Okay, Coles. They might depend on each other. Dependency. Dependency, not from the perspective of only workload operations, but dependency from the perspective of result.

[01:00:47 - 01:01:35]
Give you an example. So, Jabra Ross, we look at the whole funnel, they have a lot of data, so that's funnel breakdown. Of all the tests we do, what we think is that we can optimize the offer page as number one. We could have optimized the candidate one, sure, that's what we'll do later. We could have optimized other follow-up sequence and whatever, that will still give you the money. But why do we optimize the offer? I don't know. You don't know. This is how I feel. So it's stuff like a question of money? Why can't we start that? Seriously, you don't know why we started without it. Because it's a human thing. No, no one can do it. See, this is interesting. That's why we talk about real life and that thing.

[01:01:35 - 01:02:20]
We want to talk about theory. The reason why we start with offer, one, is because not all the leaders of the funnel to unlock that, your running immediately moves or you fail, running immediately punch so it's 80-20, that's one second thing, go to the third one, which is sequencing the test if we win that, the rest of other tests will be a magnifier to that result let's look at the run today, we don't do optimization of hardware, we do optimization of follow-up sequence Okay, we send more emails, we send more SMSs, whatever. But first, that's not going to be 80-20, because those are a magnifier, they are not in the offer.

[01:02:20 - 01:03:05]
But the offer is a magnifier. If you know that offer, the rest will be multiplying the results of that offer. That's why you sequence a test, not only from an operational perspective, but you want to have the foresight and start thinking, if I win this, the second and third win, will it magnify the first win a lot more? Or if I lose this, will the second and third test be helping me to get me back up? So we need to think about this stuff. Okay, now you understand? That makes sense. You know, why do we optimize AOD first? Why not anything else? Why not the traffic? Why not? Why not anything else? Why AOD? You know, because we talked about it. That's why we standardized that way.

[01:03:07 - 01:03:56]
Well, there's the obvious answer. Huh? And just to have more cash in the bank. No. See, that's for me. That's my answer. Maybe I failed you guys. I did not explain why we do it that way. Maybe I failed, but it's the regression. But we talked about it. Why? Why that one first, not paying as a target? The other just follow and change reaction. That's how I see it. The analysis one metric that matters is to bring them from 100 to 500 on average. It's very different from other companies. The reason why I recommend that metric is because we provide different sessions, you need to test the work. So if we form on all of our 10,000 more visits to your farmland,

[01:03:56 - 01:04:41]
you have to keep up with green. because people are paying 100 more people need to pay more so in terms of effort lets fix the debugger and the backend just so when we put more people on the frontend it magnifies the backend to eventually be normal that's the real reason so we can optimize to run the traffic quite more which don't come fit at the same time we can also fix the backend which is the big thing which is why you have a big KB fourth So, sprinting. Every test can be a short cycle, 7 days per test or 14 days. Sprinting, to me, is this. We are talking about it. Last one, input. You might ask a question. Go.

[01:04:41 - 01:05:28]
If, let's say, if it is a big event over 14 days or over a month or 2 months, so what does it mean? If you decide that that's the big batch that you want to take and it's going to take months, do it. At the same time you can also break down the big batch by charm and see which one can test first of those charm. That's going to give you the big indicator that this could work. Okay? You can always break down the big batch. Do you have a minimum data set that you would like to know if batch has post-task post-task post or not or like for ABC? It depends on the situation, yeah, but it's a minimum data that you want. So for example, job for us, we run the calculation, probably going to take two

weeks.

[01:05:28 - 01:06:13]
But what we want is not the absolute data we want, but the graph. If the graph turns to the right direction, we say that probably . Sometimes, the same thing we do, we do thousands of split tests in the microwave. The problem with split size is that when you do 80, for example, on your case or whatever, the problem with that is that people say you need to have a minimum of traffic of 80, like 1000, 80, significant. The problem is most people don't have that traffic. They just need to mention. So when you don't have that, you have to take a decision at 70, 80% confidence that you have to move forward. If it's wrong or right, it's just a decision you have to take to move forward

[01:06:15 - 01:07:01]
So think about skip test and any conversion rate optimizer you have to hit this, they are micro into conversion with respect to it, but you're missing one. You cut micro sometimes. You need to manage your cash conversion. Last one is input. Never stop having your test because input equals output. So your banked up should always be populated. OK? Yeah? Can I ask a question? The concept of 80-20, the first step, and in general, when we create a domain, we're going to come and say, what would be the definition of capacity of the team to just 20 to generate some

[01:07:01 - 01:07:46]
No, it's not about capacity, it's that you see 10 different bats. You see which of the one or two or few bats and you say it goes like wings. The return is way more than . So the impact of it. And the time spent? Time spent is under spring. You can define how much time you want to spend on that . What do you in general? There is a regular business . Every small experiment that I do, I will say one to two weeks. I will give you time and one to two weeks implement. you would not have company data but you have preliminary data. Like you mentioned, it's only me. Imagine I'm a solo founder.

[01:07:46 - 01:08:31]
I have the grader staff calling. What would be my capacity out of 100% for experiments? And I understand, okay, one day per week I just do experiment. That's not how you think about it. If you are a founder or you are, for everybody in general, every day is an experiment. You don't allocate for experiment, you're experimenting all the time. If you're doing a call, for example, 90 day success fund is an experiment. So when you meet that person, you start thinking about should I open the competition in this way or that way? Everything is an experiment in life, you're just trying. It's whether or not you're conscious that you're trying. Because here's the truth, most people don't try. They don't want to try, why?

[01:08:31 - 01:09:21]
Why? Why do you want to try? Because it's like... No? Afraid to fail. Afraid to fail. Yeah. Most people don't try because the idea of failure is not here. Failure is built into our biology. Everybody fears failure. Everybody does. You try to ask yourself like what is the thing that you fear the most? And you've got to find yourself overcoming. because that overcoming requires you to do a lot of repetitions and repetition is not easy so most people just give up, they just don't try so the fact that you guys are here that we're talking about this is that you guys are trying because there's a chance of failure right? venture capital is a bigger first business you have to be 1-2% and you have to be 1-2% and the rest is still

[01:09:21 - 01:09:59]
but that's like this one thing The experimentation that you do, you just expect failure upfront, but the few key things that you win is going to cover back all the failure. So the key is not to hang out with the failure, the key is to have the input and the speech go to all the failure altogether. But the thing is that there's a conventional saying, build fast, but you will never understand what build fast means until you do it. The advice is already there, but until you do it, you don't know how it works. Okay? So 80-20, this is your chart. If the urgency is passed and it's high impact, do immediately.

01:10:00 - 01:20:00

[01:10:00 - 01:10:47]
it's not urgent and it's not high impact do later okay what is I've seen some writers in English that speed test. What is the speed test? I've never seen speed test. I said test. Quickly. Always testing. Okay. So you have this idea that urgency in tests it's difficult to say that this test is for you. It is simple. for example what is the most urgent thing for you to find out right now in your business? It shall be needed to our key method.

[01:10:48 - 01:11:34]
Sure, let's work it down for you to hit your key matrix when you need to. There you go. Leads are much more urgent than any other thing. Probably even product has found that urgent. So your pinching process is important. That's why we have 30, 60, 90. You're not even building the product yet, but you're showing the roadmap because that's part of pitching but the roadmap will change and the product will change. Okay? Ask questions. Don't ask permission, just ask questions. If I say no, what we want is it. The experiment is never been given and always you should do. When you are experimented, it's the new thing I think you are sometimes trying to do it.

[01:11:34 - 01:12:20]
It is actually the most degree that you are ready to work in your business. I don't understand. If you test every time. You need to test it for us. But when you don't repeat it, already on the full time right after the end of this thing how soon you should begin the business after the first end it depends if you have multiple parts of business that are not complete then you get a test on carbon map but if you have one part where you have to finish test A to go to test B then I will immediately go to test B

[01:12:22 - 01:13:07]
So for example, I test this person, I test a lot of supplements, I have set a cadence for three months, immediately once the data is done I move on to the next one. Because for me it costs time. We have a certain time frame in our life. We are here. I am probably one third of my life right now, or probably whatever. Time is a mess, so I cannot stop. Because what we try to figure out is whether or not it works for me or not. it doesn't work. If it doesn't work, it's best I know right now. Then we move on to things that work. Okay, we're halfway through the presentation. Any thoughts so far? Thoughts, challenges, things I can address? Challenges me.

[01:13:08 - 01:13:52]
Alright, answer your question. Otherwise we'll go to case study, the fun part. How do you put that in work? Did it happen sometimes like one test is like so strong and you're always trying to beat that winner and you never beat it basically always stays the same? How come the tactics of this is? Yeah, more like the optimization, CRO, whatever. Yeah, like this one is like... Yeah, for some reason it works. that will be you always try to beat it but are you still going to try to like get it? you will and even if it fails it's fine because even when you're still winning

[01:13:53 - 01:14:41]
but also depends on your party is that the biggest lever that you need to beat right now or there's something that you need to beat but yes there is something where somehow you just work and try to beat it and never beat it yeah we've seen before and do self testing at a certain point or like you follow some other levels or always every level you are always trying every level always trying the most important lever which is the AD community because every business, any part of the process that we want to invest in with because if we fix it, we will replace it we all are in it works, we are ready, we need to do that but at some point we have to focus on execution.

[01:14:42 - 01:15:29]
And in reality, I don't see how, okay, we see that huge growth, product market fit, unless we focus, we can . And I doubt that we'll tell, oh, let's do experiment. We'll just run for it and focus completely on execution. When you're executing, you're trying, right? How do you experiment with all the execution of the client? Everything. When I challenge you back, I'll ask you, how do you define product market fit? Because everybody talks about it. At what point you say I already have a product market fit? At what revenue? I don't have the answer. But I think the idea of product market fit is very subjective. It's a concept. It's not a tool for me to make decision.

[01:15:29 - 01:16:16]
Because let's say you get to 10 million. Would you say you have PMF? or would you say I only have PMF when I have 100. When you have 100 would you say if you have PMF or you want 1 million. If at any given time your problem would be different. So I don't, I'm honestly telling you I never use the word PMF because I don't know what PMF means right now. When you talk about PMF how do you define it? PMF to me is a concept. I can't execute on that concept. I don't think it's wrong. I just say I don't know. We go back to the cat versus the 30-90 day revenue thing. Everybody champions LTE and I provided that they have one day data, they did hack on it. We don't. So how do I use that thing? I don't know. So if I can't use it, it's useless. Cool.

[01:16:18 - 01:17:04]
Conclusion. Each bet has a price and they are not equal. Here it looks like they are kind of equal, but in the reality, I think we should evaluate every bit by time consuming and resource consuming because they are not equal regardless

of this and it's not only about urgency it's about resources It's a recommendation. There's a framework already in the spreadsheet where there's one of the criteria called ease There is one criteria. By the way, no blank and blank. We want a framework for you to move forward. So that is the simplest way to review. But sometimes it might be hard.

[01:17:04 - 01:17:50]
There are things where it is hard that you are going to do and you are going to die. So maybe you want to do it as well. There is no blank point. Cool? Are we good to move to case study? Real life stuff, how we test? Okay. They have movement. Huh? They have movement. You want? Yeah. Can you come in front and show our everyone? We'll do squats if you do squats. We'll follow you. Come. Guys, let's go. Put some breathing to it. breathe more breathe more more for dynamic meditation

[01:17:57 - 01:18:43]
this is the first session ever in my five matches where we have a 30 degree and one more one more breathe in breathe in two more one more Ahh, good. Okay. Real life is funny. So we'll be starting time. Concepts are great. How do you make it happen? That's the key. It's all about implementation. So the first one I want to talk about is the customer support one. Last session we talked about matrix.

[01:18:43 - 01:19:29]
Remember? The case study is how did I turn your presser support team from only until you cost a million dollar team in one year. Last session we talked about matrix, we said this is the target reset, we look at the workflow, the flow chart, and then we organize it in that way. Now I want to call in everything and let you see what's the mindset behind. Again, it goes back to testing. That was the workload at the time. I set a target at the time saying, I know this team can make money, but this is pre-AI. Every team, every cause, not making money, nobody believes that they can because they are customers of operation that they hire to absolutely no support to get.

[01:19:29 - 01:20:00]
That's all. Nobody, including the team, believes they can make money. That's the key. they don't believe they can. Even my husband is like, yeah this is a team. So the first thing is, I'm like, first, that's an idea. This thing can make money. So let's figure out how to make money. The first test that I've done, you see that one, is that the leader at the time, she's an empathetic leader. Her

01:20:00 - 01:30:00

[01:20:00 - 01:20:45]
Her personality is that she's empathetic. She's a good talker. The team respects her. She's empathetic, she's a team. Empathetic, okay? People who've seen her. So I talked to her and I also interviewed the whole team, not only a team leader. What I'm trying to understand is what is your strength and what is your leadership group in. So after the interview, I say, I found another guy. I said, I can't work with you alone. and I'm more results and revenue driven. For her it's more like people, I don't take care of my team. I said I have other things to take care of. There must be a gap I need to plug. Interview everybody, we found one person, and it's a male. It has nothing to do with gender, it's just that I'm gonna give you like,

[01:20:45 - 01:21:30]
you know, the look down in profile. So when I interviewed him, he said, I have BQ experience, this is process outsourcing. That's the, this budget Filipinos, so that's the structure that's common. much more structured and process. So I talked to him like I need team to pair up with the empathetic leader because that empathetic leader can be and manage the team from people perspective but I need someone with process or structure perspective. So I talked to him and said I need you guys to pair up and I told the guy, name is Patrick, and then Patrick, I need to support her. Her name is Angela. I said, support Angela, I need you to do the process. Angela needs and making sure that people are taken care of.

[01:21:31 - 01:22:17]
Okay? So then I talked to my boss that time, I need you to care. Let's go. Then, in the end of my team, I'll test you on why I bring a certain decision that way, okay? Based on what we have just learned. So that's test number one. Test number two is we define the KPI. They have zero KPI. Based on the new workflow, we define what are the key gaps for every single Vibra. That's what we talked about last week. Once we define it, we create a spreadsheet, we start tracking all the numbers. All the numbers. Every single day, the revenue that comes in, the money that they save, are tracked on the spreadsheet. Every single Vibra will have a name behind the Vibra, which is in your spreadsheet

already. Every single matrix that we define.

[01:22:17 - 01:23:04]
There is a source and there is a mate. Exact same structure. Fourth, we use assignment at a time. We kill everything and we scream like we say there is only top parties and there is only backdrop. I only want to saturate. All I want to see every single week when I meet you as a team, I want to see your backdrop. Because I want to see what you are experimenting. Right? I actually based in Asia right? You are based in Asia, Sherman? In Asia? I'm based in Asia? Yeah, I'm based in Malaysia. It's a remote team by the way. The fifth thing is that we start enforcing weekly team check-in. They didn't have check-in that said every week I want to meet with you as a team,

[01:23:04 - 01:23:54]
and as a leader I want to meet with you, so we have two check-ins per week. The next thing is that we select a tool and we build the whole knowledge base and SOD. and if you guys are building your AI tool right now, you know that knowledge base is your goal. There's no other ways. So for me, when trying to improve performance for a business, knowledge base is my goal. I don't care about the other stuff, but if they don't have knowledge base, you cannot double down. The next thing is that we recommend daily sales leaderboard on Slack. okay now this is something really interesting they are a team of philippines folks they are hired to do live chat and email they are not trained as a service person

[01:23:54 - 01:24:42]
so when i talked to them when i talked to the team here i said i need to start recording yes what is the first thing they told me How? No, we can. We can or we can? Yes, can or can? Can. Can. Can. Can not. Can not. Can not. Yes, the first thing that they told me the TV video was she said, Nick, I'm not hired to do so. I'm hired to be customer support. By the way, the story I tell you is going to be available because you guys are going to bring this new team to join. You're going to make a lot of money. They say, I cannot do it. And they say, why not should we do this? Tenshuk told me, I need your experience, I can't do it.

[01:24:42 - 01:25:28]
I say, I'll give you a process because I compliment you. I know how to get sales. I'll give you a template. When the ticket comes in, you just follow the template that I laid down for you. I wrote out the template to do upselling. I said, no stress, you just follow. And I'm not going to hold you count of the results. Which we need to just do. Then the next thing is we were using on Slack. I started implementing daily sales video. I said, every day you guys record how much money you make. Again, no pressure. You still receive your salary. and I told them, I told them, they had a solution, I said, if you make money, I'm gonna increase yourself.

[01:25:28 - 01:26:14]
So we implemented this report. Harry? So they feared that they will have to do something like crazy stuff, do more work overtime, and you feared the easy way for them to just be involved, so they can just do their job, but also make money with your template. They don't fear they are doing over time. They fear learning new things that are outside of their identity. Again, question why people don't press. A friend of mine has one thing. Most people have an identity they cannot let go. This will be another big topic.

[01:26:14 - 01:26:59]
One of my friends, I'll sacrifice a little bit, one of my friends that I've seen we've been to in Nairobi, he's very successful, he's a man who has helped him to be loyal. He invested in the world, actually they were very early stage, he invested in 13. So he's like my brother, like England friends, he always had to say. I asked him, he said, he's going to be an invisible, you guys go to this one too, why are you going to see him? I said, Siobhan, I have a certain problem. I want to go to my business forever. If that's one advice that you can give me, what would that be? He told me one thing. He said, if there's one thing I'm living like, is to not attach yourself to certain identity.

[01:27:01 - 01:27:48]
That's what he said. Do not attach yourself to certain identity. It's dangerous. When I say identity, it's like, I am this person. that I have this, I have lived in this, whatever. And if you talk to more people, you will see that they're attached or they do to certain identity. I'm not a certain religion, that's why I need to do this. I'm this and that's why I need to do this. Up to you, do whatever you want. For me, identity changes all the time. I don't need to attach myself to identity. Why should I? Because information changes, your awareness changes, and hence identity changes. So I don't need to. So with this team, they attach themselves to the identity of the customer support. Right now, I wanted to do sales, so they say I'm not a salesperson.

[01:27:48 - 01:28:34]
But I didn't say you're a salesperson, I just wanted to do sales, doesn't mean you're a salesperson. Right? So they say I can't do it. I'll review what happens after next. Then we tabloize the sales process, we structure operations to be 24-7, where three teams do it. we add and we don't need to then we consolidated the platform we changed the platform to work towards the target because the tool itself cannot support then we're testing different live chat copy and then we hire a buyer and then we develop incentives and then there's a lot of other stuff that we use okay what platform did you change from? I forgot, it was long time though it was like a old school

[01:28:35 - 01:29:19]
change if you want. One more time. Quiz. Things that you learned. You learned everything here. Remember this. Low-hanging fruit, copy, sequence of tests, win, input. I'm going to test you right now. Which test, if you want, will make the next test quicker and easier? Of this list. Which test if we want will make the next test win bigger or easier? Which one from this list? Every test. Yeah but there is one. There is one that is key. That makes everything work well.

[01:29:24 - 01:30:00]
See? That is why I don't want to dare you. What do you think? I have some hypothesis. I want you guys to think about this because it's going to be important for you in your execution. You don't want to think about the world, you want to copy. Question again. Question. Of this list, okay? Which test, if you want, will make the next test win bigger or easier? David first. I'd start with KPS because you should define metrics Keep back, keep back. Keep

01:30:00 - 01:40:00

[01:30:00 - 01:30:48]
I think it's incentives. Who else? Maybe the process of review of the KPI. Last one. Have a click. The last one is not working. Do you want me to review? I think it's basic. Why is it? Okay, this is an interesting question. We talk about sequencing a test. We should test A has to go first, B, C, right? Because if A does well, B, C, D, E will do very well, right? So, sequencing

[01:30:48 - 01:31:35]
a test is also low-hanging for B, C, D, E, 20. The first test one that's going to do very well that will be have downstream impact is actually the first one pairing empathetic and technical leaders why is it important some of you for this problem you will always have it in your career you always have this problem in your career your co-founder leaving your best performer leaving your low performer gives you a problem you will always have people You will never, I'll tell you straight up, age of AI, you think AI will replace human, I'll tell you human is working more important than your AI right now. It's opposite. You will still work with human. AI just makes things easier and will make you buy or sell.

[01:31:35 - 01:32:20]
You will always work with human because human force is the key to your money. Your sales will work. So the first thing, by the way this is not specific to this, this is specific to any of my clients. there i ask them to show me your off chart i don't care about tactics kpi matrix asana experimental spreadsheet to me it's easy i ask for your off chart tell me who's on your team why any answers why tell me who's your team why off chart first like not why off chart matters why off chart first I almost have accountability. No.

[01:32:21 - 01:33:07]
Because it defines everything else after execution, planning, many things. I'm sure you guys heard of this, but this is a lot of experience. When I look at OCHARP, the first thing is I look at who is team leader in position. And there's different grids in team leader. If your team leader is C, let's say you bring them C, every people under the team will have D output yes it's not C output, it's D output remember I just talked about it, that the family's leader or the team's leader limiting belief caps your whole family, it's the same in team if your leader's limiting belief is there, caps the whole team because he or she is going to tell the team this is not doable

[01:33:07 - 01:33:56]
that's why cool performers can't be manager sorry? That's why poor performers can't manage others. Poor performers can never manage others. Yeah, sure, because they don't have credibility. You don't have track records that other people believe in you. Harry? Can I do this? Yes. How did you know that the first one was the most important? How did you decide? Because you already saw all the bets from the first bet. How do you know or how do I know? How do I know? How do you know that we must start with that one first and not the same? Observe my observation about people in life. I know, by the way, we talked about leading indicator and dagger indicator, right?

[01:33:56 - 01:34:43]
The last one, we talked about inputs and output. It's the same concept. You have upstream and down to impact. If you place the wrong leader in the first step when you try to run a team or build a company, all your downstream ideas are going to happen. Because these people can't execute or that they will actively block your ideas or that they will tell you this is not doable. Right? I know this session is about experimentation but I also blame people. which is why when i work a lot of people the first thing is that i'm sure the right people is in place i don't even care about the rest first if the right people is in place your result magnifies which means in your meeting your call your client your whatever it's going to be so

[01:34:43 - 01:35:29]
fun because that person's positive it will tell you if you have a if you have a failed test and a player will tell you this test has failed i wonder why let's try to get insights from it Ah, I learned this thing, how can we turn this into the next one? Let's go try it. That's A. B or C will tell you, test has failed. Let's go by somehow. That's it. It's your fault. It's your fault. So it goes back to here, bro. You look at this chart, you can implement everything, but the first thing is placing the right people in the right place because they think differently. So what that means is that let's say you have a co-founder that you have a budget you want to hire, let's say $5,000 to $10,000.

[01:35:30 - 01:36:17]
Let's say $10,000. I will find ways to get that 10 to the best people possible, even if I give up to equity, than to pay 10 to get B or C without giving up to equity, because I know that I will get the return back to the best people. Even if I give away equity, it's not a linear calculation. So I'm going to pass that skill to you. If you want the announcement impact of business to be amazing, your work is up-street. So the fundamental that I think right now is critically important. Which is why we don't have a people section in this program. But for me that's number one. So if you can put together a team in place, everything that you absorb in this accelerator, your results are going to double or triple. but you don't have the right mindset the right people you can go to 100 more

[01:36:17 - 01:37:07]
accelerators so placing the best people is my number one anything I do you got to find the best people so we look back at this list the 80 people if you look at this list it's sequential by the way I'm not the red designer this is actually what happened because I know exactly what needs to be placed in the team to be performing so when you look back at this you can actually just copy okay I walk through my plan about this I implemented them this exact roadmap the first thing is you put the right people on the face then you have KPI then you have especially track KPI then you have your knowledge base then you have Asana and the rest of ideas are just documented in those tools that's all whatever you test at the bottom you go to the second one you're hosting that knowledge okay so if you think about this the first one is

[01:37:08 - 01:37:53]
The first one is the most important. A. A is amazing. B, C, D. Downstream, terrific. A, terrible. B, C, D, terrible. OK? The next thing is get the most obvious win first and compound the result. So if you look at the blue one, what we do is that I'm going to give you a quick template you follow. And this is Real Life Token. The guy that told me, bro, I can't do sales. Patrick. Within two weeks, we got the first sale. he's like, I got the first time, I told you. Like we created a friendship, like even though I'm a team leader, they can criticize me, like, you do this one, we have a friendship. I keep it open, I made the first step, I was like, should I told you?

[01:37:54 - 01:38:39]
Then after that, they made the second step, third, fourth, fifth, whatever. So the daily self leaderboard, every single day, when in the first one or two weeks, there's nothing, suddenly there's one self, suddenly there's two, You're creating culture where even though they are not self-versive, because of the momentum that we built, it reinforces to the idea that actually, hey, I can do this truth. By the way, I'll end. This team, it was four years ago. Oh, by the way, I forgot. Last week, last time I was in Tokyo, so this team leader called Angela, she texted me, she found another company in America she moved to America she said and this is an unpopular

[01:38:39 - 01:39:24]
truth because when I implemented this I technically forced them to do what I wanted to do I'm not going to sugarcoat I'm going to sugarcoat and say I'm like a nice person I said I said if I were to do A you guys do A I negotiate and persuade but in the end it doesn't look like force I'll tell you guys straight up what do you say don't do it you fire them sorry if they don't do it you fire them No, I didn't think about firing because I know they were hitting me. If it never happened, they never did what they wanted. I don't fire people unless they are terrible cultural fit and our values are

not aligned. If it's all about not doing, there must be something that's bothering them. My job is not to fire. My job is to unblock them. Unblock them to think about things differently.

[01:39:25 - 01:40:00]
If you think about firing all the time, you have a big problem. Because the problem is you, you don't know how to hire, second you don't have the couch in the forest, it's best to go. So the problem is always you. Plus, firing has a switching cost. If you run a startup and you hire me to fire all the time, you have switching costs all the time. What do you get to off with people? Quick compensation, proper compensation, respectful, and talk about value-on-line. There will be another conversation here. Anyway, Eric, do you want to say something? I just want to please customer support guys. After this was implemented and you were attracted to sales, was there a healthy competition

01:40:00 - 01:50:00

[01:40:00 - 01:40:47]
between them? There's no competition. There's no competition because first I don't hold up a problem on sales target. You don't have sales target. I just want you to try your best on the problem. Why? It's much better. I'm a system thinker. I think about if you have a problem, I won't blame the person. If you blame the person for the problem, you're not a good leader because you're not self-commit solver. Because the problem is with that person, assuming that person is okay, assuming that it's okay. If that person is not getting the outcome that you want, there must be something in the process that is stopping them. What is stopping them is the key that you want to figure it out. So for me, I can't change anybody. What I can change is the process. So you follow my process.

[01:40:48 - 01:41:35]
My process is scalable regardless of the person. So if someone else comes in, you still follow my process, my system still works. So when I left the team, in the next few years to come, they're still top performing because the processes are intact. In fact, the other C-level that took over the team, they didn't do any refinement, they just take over. I tell them, I want you to, in the end of that relationship, I think in one or two years, I say, next level, I want an incentive plan for them. In the end, they got the raise that they want. I proved it to the boss and said, we brought in this money. Everything tracked in spreadsheet, justified the raise. And I said, we need to incentivize them because I want to take the rent in the next level. So we come up with an incentive, we call it, we say, if your team makes this much money, you must split the money. Right? And incentive is calculated in relative to the salary.

[01:41:36 - 01:42:21]
So they continue performing. So that Angela texted me last month, she was in Tokyo, she said, I didn't know why you were forcing us to do this. I felt that we were savage at the time. That's what, I mean we're friends, so we were savage. But right now she's a team leader for another company and she's like other people just don't do what we did at the time, the amount of discipline. and she's doing the role that I was doing at the time. She's taking me off so she will be here. So process is easy, but the real thing is not going to be better. Any other questions? No. Okay. With this story, I'll end with this. You think you have a team.

[01:42:22 - 01:43:08]
Not you. If you think you have a team and if you felt that the team members or you yourself don't feel certain things can be done, understand that it is what you feel about it at this time. How do you promise off that problem? You find someone else that has a completely different worldview and perspective than you. You either have a competition agreement or you can handle and say you teach me why you do this and how to copy your mind. That's how you count yourself. They didn't believe that they can close sales. At the peak, they are closing 40% of the entire company's revenue. You think it can't be done. These are tricks and tricks. If you want to go to the next level,

[01:43:08 - 01:43:53]
there must be someone that's untrue to the scheme. You want to find that someone. Do you pay them? Do you talk to them? Or do you say, you know, sometimes you can use your field. Good question. Yeah, so how do you define, you know, what's of this kind of initiative? For me it's rules like the OCAX definition of that. But I don't know, do you have metrics behind that? So it's like this one execution is good with the metric. No, some of these things are operational. I'm putting Lego bricks in place. The results will reflect in the matrix spreadsheet. If you see that the numbers are keep moving up, you know you're doing something correct.

[01:43:55 - 01:44:42]
How do you connect? You need to have a certain infrastructure in place to enable the business to grow. It's like,

sometimes you just know, for example, you're selling a tool, a franchise. I think you know that it doesn't matter how you sell the tool, it's going to work anyway because you are making sure that speed to lead is fast, that you are saving hours and time. You don't need an empirical proof, it's going to work. So unfortunately I can't tell you which one is going to contribute, those are Lego breaks, they all contribute to it. I just want to focus. So the VIN is basically that. The VIN here is a definition of that. Yeah. So it's not a definition of that. No, it doesn't directly but it's one of the key things that is supported.

[01:44:43 - 01:45:31]
Can we also define these bits for example every change, every implementation, every optimization and also a bit because it's a same kind of thing. Yeah, for sure. I'm showing you this because if you look at the workflow here, it's a blend of operations and it's a blend of silicon marking tests. So the operations here to me is not a test. For me, it's like I know for sure that's the moving. But the rest under there, like testing 10 different nitrate copies, it's a test, it's a marking. OK, so these bits are like waste if we do not to trade the results of the roles. Yeah, that's also true. Because it's going to be just one. Yeah, it's going to be the full picture. Yeah. That's a great example. A will be doing the small technical stuff, right?

[01:45:31 - 01:46:14]
Testing engines, testing protocols. Those are tests that we've done. And we have tests for certain teams, like myself. Let's say I've done a lot of the sales test. Ah, OK. I'll answer a question. This is something interesting. You read something interesting. When I go to companies, or when I mentor what the company is, The first thing I'm asking, I know the answers. Which department of the company tests the most? Yes? Which one? Which department of the company tests the most? Yes? Product. Product? Marketing. Marketing? Who else? Sales. You really might be able to answer. Sales. You really might be able to answer. I don't know why because I'm still selling sales. Engineer?

[01:46:16 - 01:47:05]
Okay, it's a pattern. When I go to any companies, whether I work with, mentor or whatever, the key that test the most are agility. It's a built-in mindset because engineering is all about problem solving. Oh, I write this code, it doesn't work, it doesn't hurt me, we go to the next group. It's natural. but when I ask the next question, does your sales and marketing team test or will you be done with team test? Yes, the answer? No. Not too much. Why? It's not in the backlog. It's not built into the mindset that it has. I'm telling you this because if you guys are in engineering, the mindset can apply the price.

[01:47:08 - 01:47:59]
So your seed gaps. Engineers will not try to test but sales market will be they don't test enough. Okay? Case study number 2? I have 3. Mariam, I'm over right? I'm always over. It's okay for us. This is fun so we are working. We will do it before 12. Again you guys go for lunch because we have that conversation. Case number 2, increasing sales conversion rate. This one will lead with Rihanna's presentation yesterday. Remember I told you guys about selling something really expensive? This is our process. We call it the two-step sales call. We have a process where a need comes in. First sales call is about making sure they qualify, that they have budgets, that they want to buy a product.

[01:47:59 - 01:48:45]
Second sales call is about closing, building money immediately. This is context specific to the business I was doing. I'm not saying you guys will have two steps. But you need to define how many steps. Okay? So when it comes to building more revenue, naturally to get more revenue, we want to increase the amount of leads and also your conversion. Simple, right? So the question is, how do we increase the sales conversion? These are the tests that we do. Okay? By the way, when we started the first year of the business, I was shocked because then I told you guys that the sales team is also a sales team, not even who we hire. We have an internal sales team member that is not performing. We switch, still not performing. We have an external one, we negotiate a contract because we don't want to be managing the sales person.

[01:48:45 - 01:49:34]
So let's test it out. So then we get a cut of that revenue. One second. First year, actually week one or two, we start doing revenue already. It's not until year one finished because we are so busy. If I look very foolish right now, but we are so busy doing a couple of things. I didn't even know that we are closing views with the Hong Kong. It's not even a Zoom Kong, it's a Hong Kong. Not a single person. Obviously, this context is specific because people like the Monabren is different and they are tricycle. That's a context. So, for real context, it's a little bit different. So in terms of sales, they do phone calls, we started streamlining the script one by one. We break everything down into steps and every step has a script that people will follow.

[01:49:36 - 01:49:59]
The first phone call will be talked about how you qualify, the second sales call will be talked about what you qualify. I won't keep you, there was a ton of problems when we started because we were working on sales. So they are good at closing sales, I am good at structuring the system and process. You do sales, but make sure that you do the right sales. And there was so much time that I need to work with a salesman that said you can't say

01:50:00 - 02:00:00

[01:50:00 - 01:50:49]
this you can't be selling this how do we do that that's a lot of fun okay we streamlined the sales group and the second thing is that we stream on calendar this time we have a couple of both of you all of you stream on the calendar when we book a call they have to show up in three days halfway in the past we probably have five or seven days the longer they book the lower the shot rate is that's what we observed. Lesson to you is when you book a sales call or you book a call within 72 hours, you got to get the first call in. Regardless of it is 15 minutes or 30 minutes. Okay? I just closed the client yesterday. From the time I first had the call with them two right now, we have three calls. My call to action is what I preach to you. When I finish the first call, the call to action is the first call,

[01:50:49 - 01:51:37]
next call I want you tomorrow speak to speak close I say let's look in time tomorrow same time quick let's go tomorrow they show up I want to look in time next call same time tomorrow speak the call is quickly important it's the same idea here okay the booking window has to be fast okay then they have to show up sometimes people don't show up for calls with implemented reminders SMS whatever whatever then we change it from phone call to zoom testing it out and then we started adding decks and then we started split testing a lot of salespersons last time we used phone call then we went on zoom then we presented that right so step by step

[01:51:37 - 01:52:26]
this is like near two huh on first call first and second call even on 25 audio still use that? yeah we ask different types of questions at first call but we still have that just an idea then everything, all the system and processes in place what we do is that constantly we start testing salesperson they are also associated their job is to recruit salesperson and the process is that if they are given x amount of leads let's say 100 or 1000 leads low cost rate they change the salesperson so we split test a lot of different salespersons we arrive to talk to we split test accent australian versus british versus american

[01:52:27 - 01:53:13]
we split test time zone and we see how it goes it's all about sales conversion and it changes all the time and it will continue to change and they'll be talking from a cream of the crop um and then They offer payment claims and different type payments and this is just so these are different things that you can offer. Question? These people are external people, external agency people? Yup. Okay, and that has worked for this company. Wow, I know. There's no one way to do things. So for me, I'm trying to find ways why people think not work, so you copy them. This is like topsy-punch, you can see how this can be done this way. Yeah. Okay.

[01:53:13 - 01:53:58]
In this case, Andy? Yeah, also. So the company always has the most important ADI, the one metric you want to achieve. So these sheets, these experiments, will go for every department. Because we have the science, we have engineering. Every team will have their own backlog of experiments. They will also have their own KPI. With this, we know we do the calculation, it's not perfect, we know that the top salesperson is closing 18 to 20% of every week that comes to the railway. So that would be an event file. So every five weeks that comes to the railway, you close one. So any salesperson that we have in the future, they have to beat that number.

[01:53:59 - 01:54:54]
because all the governments have different experiments and we also need to track that if all the governments are achieving these as moving forward together okay my question look at this list and basing off this okay basing off this low hanging fruit copy sequence spring input look at this list what like for this list we say test is at the top and then get off this wing with that one and then you sprint the test seven days looking at this list looking at this list hey what do you see which of that five do you see on this list look at this list yes which of the five here which of the five here do you see

[01:54:59 - 01:55:49]
salespeople what are the 12345 which one can we go there again yeah low-handed fruits which one low-handed fruits

low-handed fruits With this? Here There's five here Remember Of this list, which one? Streamline script 1 Streamline script 2 Phone call What's that? Yeah, really What else? testing this off. Yeah, correct. You guys are correct. I'll highlight this input. In this system, my input is a

[01:55:49 - 01:56:42]
salesperson. If I have all the processes ready, the only variable that changes will be a salesperson. So I make sure that the input of salespersons are there. we should always have the salesperson covered. Different types of things. Okay? Sure, because even if the script is not the best, but if the salesperson is sad, you will make it happen, basically. By the way, there's one thing. This is limiting the video. A good salesperson will help you sell a product that you don't think is seldom. They will help you to convince even people that they might not have the money to pay. That's what a favor, right? This is our business. I want to show you something personal. Not because I want to show up or whatever. It's not my taste.

[01:56:43 - 01:57:29]
But I want this idea to be in your mind that the experimentation mindset is not limited to business. It's basically your life. I used to have one question. Was it expensive to hire these agents for sales in the US? It's context specific to our business but we don't pay anything up front. We give them a cut and they give their sale. So it's a very cost to us. It's not a free sales. Really? We have our internal salesperson, we should pay salary. We don't find it to work and we want to build the business but we don't have the expertise to do the business. So we found these outsourced agencies that they have already had experience with other companies similar to our market.

[01:57:29 - 01:58:16]
We negotiate the deals and we say this is everything we get this, these are the terms, close it for us. And our job is to make sure they have a lead flow. Salesperson needs a lead flow. We say if you're weak, you're close. So that's the goal for me. Okay? Last case study, personal. Again, I just want to make sure it goes in the mind. I used to have problems sleeping. I used to have problems sleeping. I used to have a whoop, I lost it already. My whoop is like not great. I used to have problems being serious about it. Because if you whoop, if you're stressed, it's going to be violent. So I say I need to soft sleep problems. my down syndrome can impact on my day but practically it will go down. So what did I do?

[01:58:16 - 01:59:01]
I have a list, acupuncture, traditional Chinese medicine for one year and a half every single week. There's needles, needles. Like in this zone? Here. Everywhere. I think here. Why? That's what they want to do. So I'm like, try it. acupuncture once a week for six months traditional Chinese medicine 1.5 years not drinking water four hours before bed those are like general advice online okay changing mattress changing pillow test different type of airways test room temperature test What is the mask club? Different mask have different comfort levels.

[01:59:02 - 01:59:52]
I found one that was. It has different ear clubs, it has different mattress, it has different temperature, it has different pillow, it has a skin and a reading. Where is the phone? Where is the phone? It's a temperature 29 to 30. I'm just telling you I just soft that pump. These are the like ceremonies that I've taken. So I've solved my sleep problem. I know how to sleep. It's a skill. But it's real, right? It's not real. What was the improvement that was born? Sorry? What was the result? I lost my work but I don't track it anymore because sometimes the tracker makes it much more inches. I don't want to spend too much money on wood because it's like 1000 a year. So I just feel how I slept the day by knowing how it makes it.

[01:59:53 - 01:59:57]
You are not measuring, you are just feeling. Yeah, the best way is to feel your body.

02:00:00 - 02:10:00

[02:00:01 - 02:00:50]
i saw my three crowns moonlight goes the thing fly scene, blue eye marker, i mask i have all three so when you guys said i saw this thing i wanted to do everything now yeah red light therapy everything yeah you have a big panel at this at home maybe after we hook you up with some of our bodies just okay but my point is not about let's come back I'm showing you this not because I'm telling you about my personal life I'm showing you this because experiment is a mindset you can problem solve business problem you can also solve personal problems with an experiment vision okay yeah all of that

[02:00:52 - 02:01:41]
is there is no still improvement right no usually it is bad sometimes there is a still improvement what do you still improve i don't know something like it's 28 percent so something that increases i can tell you in retrospect what's the need for me but at that time i don't So to me it's just going through the paint. But it's incremental. Yup. Not like, to each double. There's one thing that's like crazy. If I were to go back and say I did that one thing first, I would probably see it better. What is it? Blue light locker is part of the circadian rhythm. And also, high visibility. This is not a recommendation. I don't want to check, I'm just trying to discuss this about experiment.

[02:01:42 - 02:02:29]
Don't come and ask about something like I have to be in the research like that's just professional. Ask me and ask me. Ask me. Ask me. There are three. By the way, the three that they have is the thing that is a good game changer for me. This is a long time experiment. Yeah. I'm sure you are disciplined but sometimes you are breaking the rules. How did you eliminate choice when you were for example angry before going to bed? To understand the quality of the minimum. But in the same for easiness we would not follow. I know that if I am angry before bed my sleep will be terrible. You know this guy called Brian Johnson? Yeah. He said that he scheduled his argument. I was like shit, he probably made sense. I mean it's a little bit extreme, but shit it makes sense. It makes multiple sense.

[02:02:30 - 02:03:16]
So I try to manage my emotions. I did a post on LinkedIn yesterday, how I stopped jetpack, I don't have jetpack, I tested it over 5 trips, I did my LinkedIn post every week. So this is important for me because I'm in the job of human, I need to make sure energy is high. You need to code to build, people feel you even when they are online, right? So I need to make sure everything is in place. Anything else? Did you run all these experiments in different times? Yes, different time. I mean, yeah, like one week I tested this or for two weeks I tested this. Yes. It means that it should take, I don't know what, maybe a year or something, months. It took me two years, three years.

[02:03:17 - 02:04:02]
Two years, three years. But this is a little bit different because sometimes it doesn't conflict. For example, acupuncture doesn't conflict with putting an earbud or an iron axe, right? Here is what I discovered in the context of how if the thing does not work, if the thing does not work in 7 to 14 days, if the thing works, you will only know in 3 months or longer. It is a different structure. Yeah, but if we are running several experiments in parallel, in business, I mean, like we change these, these, these, these, these. and we need to do that because we are in a lack of time, etc. how can we understand that particular this thing works? you make a hypothesis, you just feel it.

[02:04:02 - 02:04:51]
what like what yeah you can just feel that possibly is there, sometimes it's just not possible to attribute the record yeah because sometimes it's difficult to understand which bad one but for me I try to distinct it by having a proper screen process so what I test here is the same as what I test in the business, same concept my screen is 7 days to 14 days so I'm like this is my screen test, this is it yeah but it's okay to test like three things one week provided they are like different platform like different departments yeah sometimes we go on the test and cover it. okay for example if we change our product something we change in one week

[02:04:51 - 02:05:36]
I know we like change these, these, these, these. Is it okay? different experiments. I can't answer you because I don't know what that thing is. Okay, we'll talk about the information. Anything else? My question also, for every event, you are tracking the timeline, how much? Yeah, it's your spring. Anything? One last one. I just look like this. I saw it in two years, and these are my spring. I'm not going to go into that, but I have a spring. And I miss down what worked for me, what don't work for me. and I know how much I lusted, I know what worked specifically, I know what failed.

[02:05:37 - 02:06:25]
So it's the same mindset, it's a little piece of experiment and then I say these are things that work, these are things that don't. I know when I allocate money, so anything I found like this thing, this thing will work. I'm not going to get into that, but that's how I promise. okay so one key thing here is backlog this view i mentioned before the key thing here is that you have to preserve your runway to the floor for the winner that's the key thing okay i repeat your backlog you always have to have input on things like this test but in terms of managing your cache you need to be able to look at the cache and say, if I have this runaway right now, and I have a list of a lot of tests,

[02:06:25 - 02:07:11]
how do I make sure that I implement all the tools that I mentioned, the five, to make sure I have enough runaway for

me to find more living. Okay? Sometimes you can't just do tests, but I should pair with my resources. Okay? Yeah? Okay, the key is speed to results. Test a lot, test quickly. Because one thing you can talk to yourself when you find a winner is that I'm a rich man trying it faster. I'm a big fan of one guy, he's probably my role model in life, he's a farmer from Singapore, his name is Mr. Lee Hong. He probably has the best respect of nature in the history of human beings.

[02:07:11 - 02:07:55]
Have you guys been to Singapore? Yeah, Singapore. Yeah, yeah. Swamp, when they started, no water, no natural resources. For only people and the location. These are the GDP when he died. Okay. He's my role model. I've listened and I'm like, he makes a lot of sense. And most of the time, the thing that he says might not be politically correct, but it is correct. Absolutely correct. So one of the things that he has is, he only asks one question, does it work? Okay, is what he said. He says, we are not idealized. Okay, we do not believe in theories. He said, I will ask what will make this work?

[02:07:56 - 02:08:41]
Presented with the difficulty of major problem or an assortment of conflicting facts, I review what alternative I have in my disposal. I have in my proposed solution no work. I choose a solution which offers a higher probability of success but if it fails I always have some of the ways, never a day plan. We listen to this, we're like yeah this is a great concept, this downgrade execution, testing is a mindset. By the way, when I work with my coach, we talk about ideologies, I say I really don't believe in ideologies, because what is ideology? Ideology is an idea. It's just an idea.

[02:08:42 - 02:09:30]
You don't need to be subscribed to any ideas. I want to like take that only thing to leave out of you. It's ideally works when we don't. And if you think about things, people have a lot of different ideologies when it comes to ideology. It's up to you. You choose ideology or whatever. I don't choose ideology. I am focusing on the doctors. It's as simple as this. I went to a hospital and my mom was aging. She's like 74, 75. And I asked the doctor, I'm like, what do you think about creating a hydrate? Creating is just a supplement that gives you muscles, strength, also energy that might not recently gives you like brain power.

[02:09:30 - 02:09:59]
The doctor told me, he says, creating monohydra is something body than the taste. So I'm laughing at him and like, I'm not taking monohydra every day, she's way better. What do you think is the problem? They have a problem with what the doctor said. It's close-minded. That's one. That it was just for body-building. Yeah. It's something super subtle in the mindset.

02:10:00 - 02:20:00

[02:10:00 - 02:10:50]
need to associate a solution with an identity. Solution is a solution. So why does he associate a solution with an identity and only these people can take it? It doesn't make sense. If this is good for any type of people, they should just take it. I'm not asking to take it, I'm just saying in this situation. So when it comes to this, it would be the same thing. you will have people coming or us coming to you and say this is the best practices this is your building process you can copy but the key here is you need to adapt it to your context you understand? you need to adapt it to your context your context could be cultural it could be your skill set it could be something specific to your business model so sometimes when you download the best practices you might not locate right there's one thing that goes China

[02:10:52 - 02:11:37]
the big four consulting firms. So why do you put a book off there? You can find your own ways and any solution that comes in is just one task you can do. That's all. Okay, we have three minutes left. Can I show you guys a video or last one? I think I'm over, my presentation is always over, but I try to engage you guys. with my marion mariam well I have the video can I share the video How do you guys feel? I hope you've listened to your mind.

[02:11:38 - 02:12:24]
What happened in the afternoon today? We have two hours. This is what success looks like in that two hours. You have a spreadsheet that says experiment. I want you guys to copy that experiment based on what you want to test. But based on the matrix that we have, not any experiment, but how do we hit that matrix? My job in the afternoon is to work with the regular companies here. We look at the experiment and then we start to prioritize. I want you to populate the experiment. Again, you guys have voiced the text, so just put it in there and populate quickly. And also, I'll work with you, but this experiment, especially with my organization, will change when you work with your members.

Because information comes in at different times, you change your ideas all the time.

[02:12:24 - 02:13:17]
Your experiment should change every few days, by the way. It's not static. Because you always change your mind according to the information. Good? I want to show you this. Just listen and tell me how you feel about it. So we talked about experiment at business level. We talked about experiment at personal level. This is at national level. So you have like three different perspectives with the same mindset. Okay? Yes. Absolutely. Absolutely. So you and I had a conversation once about a whole range of leaders and you said to me the man that you most admired of all the people you'd ever met was? Deng Xiaoping. That's what you told me. Deng Xiaoping admired you too because he sent Chinese 30, 40,000 of them to Singapore to figure out what you would do with them. Am I right?

[02:13:17 - 02:14:03]
Yes. What was it you were doing that he wanted to see? He was astonished when he came for the first time in 1978 to tell us to prevent invading Cambodia because they are doing it on behalf of the Russians. Then he found Singapore which was contrary to what he was given in his brief. He found a prosperous, orderly society, everybody owning their own homes and with a job. So he said, how did you get there? I said, well, we educated our people and look at all these companies, Americans, Japanese, Europeans, they bring technology, they train our people, they learn how to do things.

[02:14:03 - 02:14:55]
and because we're cheaper after a while we become general managers and company managing directors and we learn how to do that and become suppliers to them so he said oh you made use of capitalism to build a more egalitarian society and body holds their own. I would do the same. And he did? He did. He did. He went back and he collected 12 special economic zones, Shenzhen, Guangzhou, Shanghai, Tallinn, and some other coastal cities, and he succeeded. So he was the greatest man you ever met because he understood, because of the results, he changed the nation and therefore...

[02:14:55 - 02:15:44]
He's a member of the old guard. He fought in the North March. He chased the KMT out across the Yonge Sea. He did that. He was a victim of the Cultural Revolution. Yes, but he was realistic. He knew the system was not working. He knew that it was going to end up. Down in a deep hole. And he decided, against all the advice of his fellow old gods, that he would change the rules. He would change the brains and the power to pull it off. Yes and when they tried to stop him in 1992 from going too fast he went down to search and said learn from all countries in the world and most of all learn from Singapore the order is good

[02:15:44 - 02:16:01]
and the other is very prosperous society. You've never had a moment that you thought Singapore was too authoritative any thoughts of that five tubes that we talked about and mention that

[02:16:18 - 02:17:03]
yeah it's basically coffee The idea is not new, there's not ideology. You guys know the history. They were ideologies. China was, they have an ideology for 100 years. A lot of people died because of ideologies. People became pragmatic right now. It's a different world. So we talk about business, we talk about person, we talk about national level. If you see across, it's just the same concept. is your in your disposal, you're excusing me. Okay? And I hope that that will help you with your decision. It's not about whether or not these ideas are weak, that idea is weak. It's about waiting for those income costs, how fast they can execute.

[02:17:04 - 02:17:50]
If it makes sense and you make results, amazing, what's the insight? If it doesn't produce results, what are the insights? Don't stop at those, don't just say, it failed, I don't want to deal with mine. Yeah, sure, it failed, let's figure out why it failed. Take the lessons from the figure give you more money down the road. Okay, if you know how to capitalize on failure, you will win more money down the road. Okay, that's the mindset. And then the failure and the successes will come out around the road. Okay, I'll make you one last story and then we can, that's it today. I used to run a marketing campaign back then, 2017. At that time, it was the largest held website in the world. It's called Authority Nutrition.

[02:17:51 - 02:18:37]
It was the largest content website. They have a big 2 million letter and they were trying to sell ebook at the time. They were supposed to make a few hundred K, but they did not make like ten hundred. And I was like, I failed the whole

market campaign. I was so terrible at the time. And back then, I did a lot of campaigns. They made a lot of money. They did some things so crazy. that I was so embarrassed and it was so painful. And then they sold it to right now, they made this company called Healthline. How do you guys go check that? And I took that failure, I went to another company and they were launching a product. And I took that failure and I'm saying, this is why you built it. And I'm gonna get it in the other time, it succeeded.

[02:18:37 - 02:19:26]
You made like one million US$, and I'm gonna buy this. They never launched a product before. And we were like, it was so good that this client we made money and the next two clients I used the same failure as the guy who used to make more money with the clients and one of them was last year. This client was a rock-a-balled bank company. So they needed money. So I say I know how to do this, I'm going to do it for you or with you. We made a lot of money and then they turned it off. So my point, think about failure as a place to get insights and say how do I bring this? How about bring this one into the next one? Don't stop there and say, I feel like you're coming in your chest and you're not sure. You're not going to move forward with building, but you're spotting like, I want to get something material.

[02:19:26 - 02:19:59]
I want to get something inside, so next time I avoid it. Everything compounds. Big successes, big successes compounds. You'll be even better than you are. Good luck. Okay, that's it. Afternoon, success is populating the stretching. Grab me once you're done, we'll debate it, I'll talk about it, and you guys have, okay? Yeah. Alright, thank you. Okay, so let's take time with this. Grab your hands and go back here, okay? So eating maximum

02:20:00 - 02:29:44

[02:20:00 - 02:20:01]
in house.

[02:20:44 - 02:20:46]
Thank you.

[02:21:09 - 02:21:10]
Thank you.

[02:22:01 - 02:22:02]
Thank you.

[02:22:34 - 02:22:37]
Thank you.

[02:22:55 - 02:22:57]
Oh my gosh, yes.

[02:23:27 - 02:23:29]
Thank you.

[02:24:11 - 02:24:14]
Thank you.

[02:24:38 - 02:25:01]
So when I have a few of these, usually, we're going to need a few of these. And we need four of them, which is 5,000. So I'm going to do that next time, so I have a little bit of the extra. So, let's get a sitting there. Choose your own, please. sorry

[02:25:14 - 02:25:16]
Thank you.

[02:25:34 - 02:25:37]
Thank you.

[02:26:03 - 02:26:04]
It's possible.

[02:26:33 - 02:26:35]
Thank you.

[02:27:17 - 02:27:20]
Thank you.

[02:27:32 - 02:27:33]
Thank you.

[02:28:06 - 02:28:07]
Okay.

[02:28:37 - 02:28:38]
Thank you.

[02:29:27 - 02:29:34]
Alright guys. I'm going to bring your clothes. I'm going to get our legs.

Session 2: One-page strategy and the numbers game

Source: GMT20260930-081648_Recording_1920x1080.mp4

Recording duration: 00:38:44. Times below are local to this recording.

00:00:00 - 00:10:00

[00:00:04 - 00:00:06]
It's starting!

[00:00:35 - 00:00:37]
All right.

[00:01:13 - 00:01:14]
Thank you.

[00:02:08 - 00:02:54]
All right. Today at 6 o'clock in the morning, I have the meeting with a company that is fundraising for a project in San Francisco. It's a US based company in a psychedelic vertical and they were raising for a building that they're building for the hospital cleanings to bring psychedelic therapy versus psychedelic therapy to a trend that's happening in US based on the regulation by FDA. And I was so impressed with the outcome of his one page strategy plan. I'm not thinking what is the plan, I've not heard from him yet, it's a nightmare now.

[00:02:54 - 00:03:38]
Basically he has prepared a proper document for investors to move forward in terms of the market share, in terms of where it's going to be in five years. And it was not an Excel sheet or any other easy document, but it was an agreement that was extremely interactive. You change one variable like the customer cost or you change the number of customers per country, per whatever criteria you have and the whole document was changing. So I was absolutely blown away because that's something that I would like everyone to go with for investors. so I'm getting that for you. And this is connected a little bit to one-page strategy plan because

[00:03:40 - 00:04:30]
I also asked them like, say I have four companies, call it, and I asked them like, okay, today is 30th of September, tomorrow, tomorrow is the first of September, October, right? Or one more thing? Yes. I'm going to show me your one-page strategy plan. Show me a plan for your company that's going to be executed in October not something that you have in your head because quite often we are all having the plan in our head but you know like show me the plan because then I also need to understand that you have a plan where you are going right so everything we have talked about and there's hundreds of tasks and right now you guys had a workshop about how to create a talent of experiments like how do you stay focused and how do you have this clarity to move forward we were doing this

[00:04:30 - 00:05:25]
in Saudi Arabia five years ago and it just literally like conversation after conversation and I'm like you don't have a plan, how can you operate as a company when you don't have a plan you have some tasks, you have some ideas and it's in your head. Right now you have the small things but when you have bigger things how do they even know what is the plan, how do they know how to focus. We have done this exercise in Bali a while back based on this book called Rockefeller Habits. You guys heard about it? It's a really good book, a lot of templates, like how to plan. We would log our management team for one day in a location and we'll go department by department, team by team, with goals and we'll go back to the tasks, go back to the timeline and to the learnings. We had a proper plan of what is happening and then we had a meeting, like a three hours meeting with the whole company

[00:05:26 - 00:06:12]
this is what we're doing we need to get buy-in from everyone this is your part and this is how your part is going to impact the company so we literally were getting the buy-in from them and also making sure that everyone understands what needs to be done but also understand how all your companies departments will influence the whole revenue work right but it starts with you so what is your one quick strategy plan so it's all about the numbers so i'll show you how to win the game and how to create that plan but before we go there like do you guys have already a

meeting that should happen a few days ago to reflect on what happened in september what was our goal

[00:06:12 - 00:06:59]
that we achieved what did we learn what worked what didn't what learning are we moving forward to October who has that meeting already the company planned or had it before okay and then the next follow-up meeting is like it's a strategy plan for the next month so you have two meetings scheduled in a product right so tomorrow yes one is the reflection and normally I would say the reflection should be around 25th of the month because we need time to prepare for implementation starting the first of the I'm not sure if it's five days, we're going to change the trajectory of the economy. Yeah, so that was my question from there. Is it totally virtual or equipment or so on?

[00:06:59 - 00:07:45]
No. No. Unless you're analyzing months results. Yes, but you're analyzing 25 days and less in the next five days, right? From the 20th to the 30th, you know you're running a big campaign. Because it's a big campaign, right? But if you already have a plan of action for September and you understand the conversion coming so you can assume how much more extra of whatever that goal is you will get unless again there is something that you are having a new test in place and that can drastically change the whole situation or you have a prime campaign because i don't know like 20 years of the month stock campaign that you know that something should contribute to 50 percent of the monthly revenue That is a different story, right?

[00:07:46 - 00:08:32]
Is there any other scenario you have in mind? Yeah, I just used to do the monthly business but there are probably months in. Yeah, there are the results of the whole month. I know, but I don't have time to plan for the next month. So you will start implementing the next month on the 7th of the month. So you lose one week of your month. I just want to say, we do it, but then we stopped doing it So we can't lose the... That's the thing. I don't want you to be busy. Yeah. Because we are all busy all the time. I want you to get clarity. So at least what you do and your team, because of you it might be in your head and it's easy to stay on top of that, but what your team is doing, you don't want them to be busy.

[00:08:32 - 00:09:19]
You don't want them to start the day from opening the emails and then we lost in the 500 emails they have to response, right? Alright, but we do delay so that's not good. used to do that one and then do it through this day which is very bad. Yes, we do it one, we do it that. But if you do it with 20 feet, the last five days are not going to change that much. Because you will check what is the traffic, what is the conversion, and you can assume how much more revenue you're going to get. So what is this win number game? So after that, when I introduced this, I was working with this company. This is a Saudi Arabian company. It was car cleaning services, but the service was provided by bikers. So basically around back then, they were riding the motorbikes.

[00:09:19 - 00:09:59]
And if you booked a car cleaning through that application, they would be in the office. They would come in the car. If you want to have an inside, you have to open outside. You don't have to meet them. Big problem in Saudi Arabia. there is so much time that needs to be taken from your daily life to clean your car and those sunsets and basically everyone else has a clean car. Massive business right? And he said right now our goal for November so that was October we want to have 30,000 orders and $550,000 in revenue. I'm like okay show me a red man. So when I say show me a red man like what is the first thing right? I want to understand what is the current situation right? So there were 20,000 orders,

00:10:00 - 00:20:00

[00:10:00 - 00:10:45]
400,000 revenue and I'm like okay what is the split between B2B and B2C because they have both where is the traffic coming from that actually contributes to those bookings right what is the number of meetings you have every month what is the number of meetings that you have you know those B2B companies or clients number of sales calls new customers new customers I want to know all of this before I will create a plan for them or they will even go and create a plan for the next month does this make sense that's we are so strong on this like show me your number because if you don't know it it's very difficult so then i was like okay so what do you do next if we know and understand what are the different traffic sources and conversions and everything you guys have access to all of this in um

[00:10:49 - 00:11:35]
sure so i always look at it from the perspective of like there is a business as usual right So if you've already been working on your company, you have different traffic sources that are coming on the pilot, right? Either paid or non-paid. It's just basically your main business. The assumption is that if you do not attach anything, you should get that number of customers and revenue by the end of the day, right? If you have this traffic coming. So that's what is the percentage of the revenue that I had done this month that came from business as usual. probably around 70 to 30. 70% should be come from this business as usual and 30 persons should come from those monthly campaigns. That's what I said. If you need to know that your monthly campaign is by the end of the month then you probably have to wait for it.

[00:11:35 - 00:12:06]
So what are the and then there's a new market, a new product so you can also go maybe 60, 30 and 10 in terms of like okay we know that we need to enter this market so I'm going to allocate resources to that and maybe this month 10% of the revenue will come from that market as well as from new products or new products features that we'll be pushing to the DC customers. So where do you, right now, how much money is this month in October?

[00:12:15 - 00:13:01]
4,500 right okay do you know how much of this came from your regular business versus campaigns you've done so 100% so so those are subscriptions so next month you should get if but it's going to turn, you should get $4,500. So next month, you want to just say do $10,000. You already know you get that $400,000, so you're missing $5,500. So then I'll be like, okay, how much of this money is going to come from my business as usual versus campaigns versus new products? So when you plan, you really need to, like, I don't want you to be in a situation like, this month, you're going to do $10,000. I'm like, how are you going to get there? Show me the path, how are you going to get there, right? And stack you to a dollar.

[00:13:02 - 00:13:49]
So if you know how much money you need to make from business as usual, then you understand how much traffic you need to send. Because you know your conversion. So it's literally like going from all the way back with all the conversions and benchmarks that you have. Or if you go to something new, assume the benchmark or assume what conversions you would like to have and calculate. So then, okay, so what we're going to do right now. So this business as usual, we test and optimize. right if we use the same traffic source we want to increase the conversion what we optimize how do we optimize the monthly campaign so we have users monetization so you have a lot of leads that were sitting on right maybe you do it every month or you do it every quarter so every quarter you say okay we have

[00:13:49 - 00:14:38]
20,000 visits and from that we got 3,000 leads but we have not been able to monetize them right so assuming you talk to them you understand why you have not then you launch campaign and you monetize it and the campaign will be a special offer campaign or a testimonial campaign whatever assets you decide to use does this make sense and then you have to monetize existing users and then you have new products that's all about expires right but it's not for everyone we don't launch chumwain but why you don't launch campaign Why you can't launch a campaign in B2B business? It's much more organized with a special message for a special event.

[00:14:39 - 00:15:24]
Like the Black Friday, we supply, surprise, how many B2B businesses launch campaigns for Black Friday? Or back to school. It's all about giving people a reason why you launch this campaign. campaigns are not only for... maybe you even take part of the campaign but you are not realising the campaign a campaign must be an event attending, right? an event, the event series well that's what's the goal of the campaign entertain users I don't think right now... get leads, go to an event and get leads so it's a business as usual so you're basically expanding from your traffic sources I'm talking very strictly about monetisation all are sitting on users that are not taking advantage of.

[00:15:24 - 00:16:13]
Users leads, the free trial users that have not paid. So for example, if you have right now on your end, I don't know, even thousand free trial that they have signed up for it, but did not move the premium, I would want to campaign for them to move the premium. Does this make sense? That will be the best. It is the best. But that's the focus I would like you to have every month, right? I have business as usual, I test optimize, I see if I have the potential to monetize existing users and if I expand what is my plan of action, right? So here test and optimize, I maybe go and create new, create these new demos, I will create more pipelines for different traffic sources, I will do maybe different lead scoring

and discovery landing page,

[00:16:13 - 00:17:03]
with the traffic channels or marketing channels. So I've been using email, but I want to use SMS or I want to use specifications. And then when it goes to campaigns, you have two different campaigns. There's the evergreen campaign and event-based campaign. So Black Fridays, Christmas, back to school, whatever. Because they are set in a day of a year and you can only use it for that time, right? But definitely take advantage of that. And there are the evergreen campaigns, like testimonial or key-studded campaign. every campaign. Why this is important? Because right now your business as usual is based on the funnel that you have, right? The seven touch points that we talk about. If you see that this campaign, let's say you launched a campaign with the case studies that you recently had, managed to monetize 30% of the users, you take

[00:17:03 - 00:17:48]
that campaign and you put it in your authorization. So the next user that will will see the regular traffic that sorry the regular content that you have from your funnel plus that campaign because you know that campaign works so that's how you expand your funnel as well month after month unless your campaign is focused so that's the best part does this make sense this is a very clear strategy of how to build more funnel how to build a business and what campaigns makes sense Because it's just that the fusion is so many steps and each of those steps... So many steps? Why so many steps? You basically...

[00:17:48 - 00:18:32]
It requires brain power, each of those steps. That's why you need to put it on a paper, so you don't have to use your brain power, right? So right now you have two traffic sources inbound and unbound, and you have a funnel. That's your business as you do. Right? So if you look at your funnel and you see, okay, we are really happy with our conversion, we need more traffic. So what is the focus for October? Traffic. We don't launch a new website. No, you focus fully on traffic. That's the reality I would like you to have. And then you put more traffic and then you look in the conversion is the same, the channel is right. We are not changing everything at the same time. Or you say, we get a lot of traffic but we are not able to convert it.

[00:18:34 - 00:19:31]
I think traffic is the main problem for all of us and it's not so easy to just put more traffic on our website. Nothing is easy. Yeah, I mean it's easier for, let's say, previously I had a blind university with over 50,000 students. And I understand what you are talking about right now because we can do a lot of things in like paid traffic etc. Now for example, challenge for us, we need to attract very specific clients with specific problems, specific size, mid to large enterprise.

[00:19:32 - 00:19:59]
and for sure we have this problem with traffic even if we have traffic, maybe 95% of this traffic is not our recipes so then you have to go around the traffic, right? yeah, yeah, maybe what is that problem? so the question, if I understand that my problem is that this type of spano Yes?

00:20:00 - 00:30:00

[00:20:03 - 00:20:59]
So you can definitely stop talking about creating new... If you convince your conversion, not convince, if the numbers are showing you that you don't have a problem with the conversion, your whole thing should focus on traffic sources. It should not be changing the landing pages or changing the next shiny object. That's the clarity that you have. This month is all about traffic and you can make every month about something else. But you cannot make October 10% of traffic, 10% of conversion because I want you to have a massive action. Yeah, so I think that my mind is very limited that I am thinking about the stop of the battle, what can I do? I can do different content, I can try... So we are not brainstorming right now in the US, it's just a concept of that if you know that this is the problem you have, then the whole team is coming and brainstorming about how can we get this bio-tribal.

[00:21:00 - 00:21:43]
Yeah, that's the clarity. This is a strategy plan that we would typically discuss with the team for the month of October. Yes, so with the team of the C-level and then you present the whole team, right? or whoever needs to be. You don't plan this with the whole company, and that's what happens. So you plan with the top people, and then introduce that plan to the whole company. This is what we're going to do. In case of it to be a day, we don't do yet an outreach. What

do we do? So you focus, you don't have to do all of it, right? You focus where you need to be this man. We will go to events. So that's your traffic strategy, right? That's the traffic strategy. We are going to go to events.

[00:21:45 - 00:22:31]
And campaign and launches? I mean, campaign is like if you already have, and some of the companies have here, thousands of leads sitting in their email marketing tool, then I would activate them through a campaign. And perhaps in our case that would be a particular test that we want to launch this one? Yes, all the campaigns are always tests, right? and then you if they are working if you see that the value per visitor is high and it's something if you look that your value per visitor is $5 on average right as you launch a campaign and you see that your value per visitor is $7 that's above your status then you take that campaign and you flag it into your traffic to be launched on

[00:22:31 - 00:23:17]
So any person that will sign up for the demo or whatever, whatever your mechanism factor is, they will receive information about the campaign. So now for the month, we discuss this event, this broadcasts for companies, and for example, are they launches? If you're launching new markets or you're launching new products or features, but again... it's more about progress you will learn more to market right going to France you guys already guys this one yes you're going to France you do market research you need to understand what is the competition then right but like it's also part of experiment yes you have experiments in all of it right it's just different

[00:23:20 - 00:24:05]
focus okay and why not laughing about the product itself what do you do next month for the product it's also the part of the strategy yes so that's the new product new product yeah but literally like the goal is to have your team to stop chasing the next time playing object and we are all entrepreneurs we are all always full of ideas like I can give you and you can do it yourself. I want you to start chasing the next idea, but really focus on something. Get it properly done, get the proper test of the time, get the results and launch it. How does it sound? So then when you have this, you go to the tasks, right? If we want to do this,

[00:24:05 - 00:24:52]
what do we have to do the task? And you assign this task and responsibility to your view. Are you guys using task management tools? What tools are you using? Well, big guy. I know. But are you using them or you have a subscription? Are you literally, every time you have a meeting with your team, the first thing you do is please open the trailer and look at all the tasks that has been assigned to you, what is the status of it. Are you actually physically using it? Or you haven't? Yeah? open your cellar and see what's happening. This is the plan. This is where we are. Not yet. It should be like, if I'm talking to my team who is a specific traffic, my first question would be like,

[00:24:53 - 00:25:40]
what is the goal for the month? Everyone likes to worry about the goal. They say, tell the new users, I'm like, okay, which channels they should come. I will always repeat what is the goal. So they are focused on the goal. What have you done last week to get you closer to the goal? What worked? That would be the conversation, I would have the meetings and I would keep them accountable to that platform. Yeah, we do but we don't yet articulate the goal of the month. We just continue and continue with the team. Yes, I have another client, I have a lot of campaigns every month. What's your goal in mind? Oh, we want several customers. I'm like, we're going to spend two weeks for several customers, forget about the campaign. It does not make sense and does not work your time and resources.

[00:25:41 - 00:26:30]
So if I launch a campaign I will call me like, okay what is the goal? It's not like a wishy-washy goal, I really need to have a proper plan of action as well based on the current conversion or possible improvement of the conversion because of the test campaign. So then you basically go and you create all of this for your team and put in a trello so everyone is really aware of what do I need to do, how this is going to be measured, how am I going to get there? And if they have challenges at any point, they come to you and say, okay, I am stuck here. And they come to you in that moment when they are stuck, not by the end of the month saying, oh, it did not work out and you lost two weeks of your time for that month. Okay. So then I will look into my one page strategy plan. I will be like, okay, this is the metrics I'm tracking. There is the revenue, budget,

[00:26:30 - 00:27:19]
app downloads, bookings, repeat bookings etc etc. So this is where I want to be. This is where what is happening right now between B2B and B2C and I will have a proper understanding of what metrics do I need to meet and what point. So whatever that number games for you is, that's where you need to go. What is the revenue you have right now or

what is the revenue you want to have and then you go much more into details. Cheekly marketing channels. So, I need to have the number of downloads, revenue per lead, number of customers, customer recruitment costs, repeat customers, revenue spec. Totally this one, which channel is going to bring me what based on my time conversions and then maybe improvement on a specific channel that I decided

[00:27:19 - 00:28:04]
to improve this month. how detailed you can go. So then maybe I will see that through this that Google gives me 1500 downloads but it does but creates more revenue than some other channel. So maybe your focus as well is on that specific channel versus just running around and trying to organize everything. And then I will go all the way to If I look at my funnel and this is the funnel that I know as one from website visits to visitors to sign up to the No, this is based on the gold app So then batch one this is my cost if you go into cost batch two

[00:28:04 - 00:28:53]
I want to see if I'm improving with time or not this is like much more in depth in terms of the cost and conversion but the end goal is to really understand where is your traffic going to come which channel makes sense for you to focus because again you have very limited resources. And then this is the B2C and then also B2B right? So for example right now my current stack is like I get thousand visits, 150 emails, my sign up is 35%, I get 52 demo from that, 15% sales conversion, average order value, revenue a month, revenue a year. So if I'm not going to do anything, if I will run the same business every single day, I will have $18,000 by the end of the year, assuming nothing else will change.

[00:28:53 - 00:29:39]
But in this one there is now a budget specific item, and here we don't see what was the status. No, no, no. But you can have the budget as well. But is there a reason why you... No, because I didn't need the budget to make that point. So, right, because I'm not looking at the ROI right now, about right now this is gonna happen if I will say increase the emails right so instead of a thousand I would have five thousand so then I would be like okay if I increase the emails to five thousand my yearly goes to 93 so my focus this month and maybe months to come will be to focus on that or increasing the emails and I will brainstorm maybe I'll increase the budget because the ROI is so

[00:29:39 - 00:29:59]
positive or maybe I will increase the landing page conversion, whatever it is. But I'm focusing on one thing, right? And then I'll be like, okay, how about changing, doing experiments from text to video on my landing page? So my signup goes from 34, 35 to 40, which from 18,000 will make me 21,000.

00:30:00 - 00:38:44

[00:30:01 - 00:30:45]
Then the same, okay, how about increase the visits from the email, so maybe I will launch new email campaign. And then those sales conversions, so I don't know, experimenting with the price justification of the page, writing testimonials that increase that sales conversion. all the way to increasing average order value. There's quite a few companies we talked about why won't you go and increase your price? What is stopping you from doing that? I don't know who was having this goodcomer value. Are we talking about increasing your price? No. Yanis? I have this conversation from someone like hey they come and they buy, like go and increase the price. What's stopping you? Have that test. And then if you You accumulate all the change from 18,000 you go to 188,000.

[00:30:46 - 00:31:31]
It is a projection but also like... It is a projection of course but that's your goal right and your goal is based on your current situation and then focus on getting to that goal. Versus like okay October is here what you gonna do and then how many more traffic okay I have this idea. It's like also disconnected And you're probably spending time and resources on things and places that... and your team also trying to run, right? So let's go back to what Nicolás is talking, right? Plan, test and test more. You can grow what you know measures. Stay focused and remove the shiny object. Because there's so many of those shiny objects. And one one goes by like this.

[00:31:31 - 00:32:21]
And there are 100 things you can work on. So again, how do you decide what you work on? Which part of your business? That's the book, Mastering the Rook of Other Habits. It is a really, really good book. Lots of templates. Much more detail if you want to just share it. Any questions? How does this sound? Okay, you don't have to have that in that format. every single one of you on monday when we have a call to open the one-way strategy plan and show them what is the goals and how you got it better so i usually use block hours and mattress but those are the goals i

mean it includes in my case it includes the initiatives

[00:32:21 - 00:33:11]
okay and it's i practice is what we have self-spotority and is this based on numbers or is this based on what you want to have no okay and do you talk to your team about to present your team and everyone else and you guys have an amazing template i want to share with everyone else But the main thing is that what is your plan? It's scary to me how many companies do on the planet or have and then don't follow. That's another thing. Because we have to change the whole habit of the organization operation.

[00:33:12 - 00:34:00]
operation when we did it in Mindvalley that came it was like a 20 million boost in the company because everyone was so laser problems versus like maybe there's this new feature on instagram let's explore and then you know three days pass by and you just like haven't done anything that is going to contribute to that but also that would let you keep your company uncomfortable because if you have a member, a team member, a marketing manager and they come to you and they say, oh we're doing this and you're like this is not part of the marketing plan or like the one-based strategy plan we have created, stop doing it this month, put it on IP as least and we'll do it this month or when we will decide this is the right place to do that. Because what we need to do is focus on getting this to member panels.

[00:34:00 - 00:34:32]
Okay? Any more questions? You mentioned the secondary. Second, yes. What would be your recommendation for us? Shall we, shall we take clients mushrooms? Well, I take mushrooms on many phases, but not the organic mushrooms. What kind of mushrooms? I take chaga, fortisone, my online, I take five different mushrooms for the last four years. I went through chemotherapy

[00:34:43 - 00:35:38]
it's like this there is a?? and it's absolutely amazing i'm not going to be about the scouts in the beginning even though they grow it on my house but no but the psychological is of working with a lot of depressions and phobias on Alzheimer with microdosing. So it's enough to have different neural halves created in your brain but it doesn't get you, it's microdosing. So do you have lots of experience? No, I'm sure that the ones that just in a nutshell I took them this morning and I told you to watch the fantastic fungi, the whole world can be healed from mushrooms.

[00:35:40 - 00:36:26]
It's 40,000 mushrooms. 30 degrees. Yeah, because I don't have an idea. It's not about food. It's a food. They've been so excited now. I've never seen him so excited. Do you have a business with mushrooms? Do you like some brand? No, but my good friend. So you're a college student? I am the main customer. Do you know what you call my hair? Because in my hair they also have a lot. No, because again I was taking a lot of commercial mushrooms and then he opened his mushroom business and he checked what I take is like this 2% of what we say is in your mushroom. or the person that actually has need that money quality versus the feelers

[00:36:26 - 00:37:13]
so I switch to these Why is this more interesting? Much of them than I'm going to be I don't know, I'm getting told you Finally, I'm trying to put my show down the bathroom Did you see everyone who stopped at that? Yeah, everyone's like, oh yeah, she's so boring You guys have a bathroom I can do it please Alright, that's ready I'm recording so... I'm recording. As you say, it's about people who are in quality. My friend and I, as well, a few years ago, opened and said it in a different different kind of clothes. That way? I can't see. That means I can't see if you see these, but it's not an

[00:37:13 - 00:37:44]
advice to start getting questions. I would say, I'd like... Thank you guys. I will see your one-way strategy plan on Monday. Please submit it to your slide channel. This is the homework. Submit your one-way strategy plan to your channel for all mentors who have visibility by Monday. For October, November, December and so on and so on. All right? All right. Thank you.

[00:38:03 - 00:38:27]
It's mushrooms every day. That's our secret and that's our one-page strategy. Julia today will be like, you're the best Monday and Tyler can give you a message. I'm joking. That will be awesome. I'm joking. Just joking.

[00:38:38 - 00:38:41]
Thank you.

Session 3: Experiment-board workshop and questions

Source: GMT20260930-090559_Recording_1920x1080.mp4

Recording duration: 00:24:16. Times below are local to this recording.

00:00:00 - 00:10:00

[00:00:10 - 00:00:29]
No, no, don't you? I just need to search. How are you guys feeling? Great. After lunch. You feel sleepy? I don't know. Somebody took my lunch. Wait, who stole your lunch? I was going to say, I have no way to be found.

[00:00:47 - 00:01:35]
there there was nothing so that's why take so that was they are bringing here Nothing was left, I checked. I will let them know, but yeah, I mean, they can't bring the main dishes here because there is no heater. So, okay, but anyway, I will let them know. Okay. Everybody in? Here we go. I'll just be running away. Good lunch. That's not enough. How do you guys feel? Have you guys digested the things we talked about?

[00:01:36 - 00:02:22]
What? Digestices? Have you guys digested? Oh, I just said it. Might as well take a few more hours. Any thoughts? Some thoughts? Yeah, about this morning? What did you learn? I think the easy part is to put ideas on the paper but then to prioritize. To do that it's kind of the help. And then I think based on the facts we need to create a different plan for the plans. So what bets we are really doing these plans.

[00:02:22 - 00:03:08]
and elementary and different tracks like revenue track retention track yeah this kind of stuff okay we'll have less talks this afternoon this is what I want to do with the next few hours less talks more to win you guys have your one-day trip that matters What I want you to do in the next two hours is that one map out all the experiments. Okay, it's already in your spreadsheet. Let me just walk you through real quick. Okay, score is basically automatically calculated from here.

[00:03:09 - 00:03:54]
Okay, and these are your experiments. These are your hypothesis. Why do you do the experiment? These are the category. Is it revenue? Is it like, are you guys familiar with the framework AARRR? No, okay. Now forget about the category for now. Owner is basically who's going to be in charge of running the experiment. Okay? Let me tell you, you look like you're confused. Yeah, I think I did. Owner is who's running the experiment, who's in charge of the experiment. Okay? Impact is you rate it based on your thoughts like how much big impact would you think this one may or may With 10 being the highest Cost is the lowest

[00:03:54 - 00:04:39]
Lowest is Here 10 being the lowest Just pay attention 10 is not the highest cost 10 is the lowest cost 10 is the lowest cost okay yeah what yeah what we want is because we want to sum all of this and then it will automatically do a calculation score right so so 10 is the lowest cost ease 10 is the right put it here okay 10 is the easiest to implement what's the difference between cost and ease because Because for me, like, it's quite equal. I would say that for me, EASY is more waiting about our certainty. Like, we are sure.

[00:04:41 - 00:04:56]
EASY is how easy it is for you to integrate. OK. Cost is mostly cost. Is it high cost and low cost? It could be easy, but it could be high cost. It could be easy, but also low cost. So time is in the water.

[00:05:06 - 00:05:51]
i want to i want to i want to make sure you guys get it because i know sometimes we look at cost we say automatically our brains like 10 is the highest cost right but the spreadsheet has to calculate so 10 in this case in carfes yeah yeah okay because when we say one to ten or ten high cost automatically it's not okay then yeah I put everything here you guys can see look all right start date and end date is when you want to start when you want and we talked about sprinting you have to have a start and end date okay and status is whether or not it's in progress have you started or is it done results you have to write it out like what's the results of here after results you need to say what is the learnings

so everything we talked about

[00:05:51 - 00:06:38]
this morning it's everything well structured so you just gotta follow the process it cannot be cannot be that you don't have insight you must have insight after you do the test okay and and i have the score those who should be the first your prior time yeah so you might want to move around like especially like something more easy yeah yeah it's worth it to uh do what says two two separate spreadsheets, one for product experiments and product hypothesis and the second one for revenue, like try and play channels, how to reach Just not to mix them when we have cut here Yeah, I see, but not to mix them in one spreadsheet

[00:06:38 - 00:07:26]
Okay, I'll keep it flexible, I would recommend only one spreadsheet, only one for a secrecy Because every time we try to get fancy, then we go to execution, then people actually have two spreadsheet, and I have my name on one, and then I have another name on one. So suddenly I have two things, and then they are not in one view, and then people are like, they didn't confuse their step over one. My preference and recommendation is only one spreadsheet, and we're a small company right now. I don't feel that we need to overcompete it. Even if you're a big company, if you cannot communicate with Carly very quickly, the top three to the company, like in one or two minutes, then you have a private product. It doesn't really matter how big the company is, I only look at the background. So we go back to the first question and ask, how do you know within five or ten minutes that you know the company is going to make progress?

[00:07:26 - 00:08:16]
I look at the top five, seven to ten things. So if you look at the spreadsheet, you have ideas, but you can move it around. Once you prioritize, score them, you're going to move it around. The rest are, they're not prioritized, or the rest that has low score, you move it under the background. is because you want to present this to your company, the team and say guys at any time this is what we are testing. Super laser focus, there will be 5, 7 maximum 7 that we are testing at any time on a weekly basis. Or like on a 5 weekly basis. Maximum 7 tests on weekly basis? I would think it's super simple. For one week 7 tests that's already on? You can have 7 tests for 2 weeks too. I'm just giving you a magician. normal yeah you have different departments whatever you're testing if i see you have a

[00:08:16 - 00:09:03]
lot of stuff in the priority experiments i know that you're not focused if i see 20 i'm like unless you have like 50 people i know you're not focused already but i actually tell them that even if you have a deep tent there's still three focus okay so i just want us to focus what we want to figure out this week one we want to figure out next week next week next week okay now one last thing i'll close again two hours i want you guys to get together populate it use your voice and text it'll be super quick discuss with team member come to me and then we talk it out and tell me why you prioritize friends and i'll help you to prioritize them okay and then at 3 o'clock and before 3 o'clock i need to sign a ring off and you guys can go home or go to the office hours

[00:09:03 - 00:09:52]
okay now one last thing think about this why top five or seven why you narrow it out it's very simple a lot of people want to do a lot of things and they don't have the timeline they don't have to screen time and seven go proving so like we don't have it what they'll end up is that you have a lot ideas that they cannot execute or digest and then they start getting frustrated with your team or my result i already have a lot of stuff i already done this why am i not moving my needle which is why i'm not moving my matrix it's very simple matrix definition is simple execution is done so this helps you to get super organized and disciplined okay good so grab me if you want

[00:09:52 - 00:09:59]
I'll be here but definitely routine and figure it out. This spreadsheet is not limited to any departments. All right.

00:10:00 - 00:20:00

[00:10:00 - 00:10:14]
right. Thanks. You're welcome. 3 p.m. Thank you. . .

[00:10:35 - 00:10:38]
Thank you.

[00:11:16 - 00:11:19]
Thank you.

[00:11:47 - 00:11:48]
I don't think it's a question you'll have to.

[00:12:34 - 00:12:37]
Thank you.

[00:12:56 - 00:13:15]
terrible yeah so double done experiments in progress yeah those can be so new and in progress if you start already in progress okay for those that have not started you say it's not after that yeah but we do this i think everything's going to be ready or something will be in progress

[00:13:26 - 00:13:27]
Thank you.

[00:13:58 - 00:14:27]
Yeah, and also your . Yeah, big team work. So you have to create this culture . I know . We have some . So like we have some . I would like to have . Or if your team is big and . I have a few.

[00:14:52 - 00:14:59]
Thank you. Yeah, we have to go get along.

[00:15:27 - 00:15:31]
I don't see my feeling burning. So I don't really think it's almost a lot, right? It works.

[00:15:57 - 00:15:59]
Thank you.

[00:16:34 - 00:16:36]
Thank you.

[00:17:12 - 00:17:13]
Thank you.

[00:17:46 - 00:17:48]
Thank you.

[00:18:12 - 00:18:14]
Thank you.

[00:18:48 - 00:18:48]
Thank you.

[00:19:18 - 00:19:19]
Thank you.

[00:19:46 - 00:19:49]
Thank you.

00:20:00 - 00:24:16

[00:20:06 - 00:20:09]
Thank you.

[00:20:34 - 00:20:35]
Thank you.

[00:21:06 - 00:21:07]
Let's go.

[00:21:44 - 00:21:44]
Thank you.

[00:22:15 - 00:22:16]
Thank you.

[00:22:46 - 00:22:48]
Thank you.

[00:23:14 - 00:23:16]
Thank you.

[00:23:43 - 00:23:44]
Thank you.

[00:24:12 - 00:24:13]
Thank you.
