All session transcripts

Week 2 Day 5 - 2 October 2026

Automatic draft - check the recordings for exact quotations

All recordings were processed locally. Speech recognition may mishear names, accents, room discussion or overlapping voices. This is not a fully human-verified verbatim record. Speaker identities are not assigned. The study guide interprets the content separately.

Total recording time: 02:10:38

Timestamps restart at zero for each recording. Use the session number as well as the time. Short speech segments are grouped into roughly 45-second paragraphs without rewriting recognized words. Individual TXT and SRT files provide finer timestamps.

Session 1: Sales-demo practice and mentor feedback - 02:10:38

GMT20261002-054458_Recording_640x360.mp4

Sections needing extra caution

The opening roughly five and a half minutes include repeated 'Thank you' recognition on non-teaching audio; these are probable recognition artifacts and are not used as lesson evidence. Room discussion, overlapping voices, names and numbers elsewhere can also be misheard. Speaker identities are not assigned. Check the recording before quoting exact wording or reusing a numerical claim.

Session 1: Sales-demo practice and mentor feedback

Source: GMT20261002-054458_Recording_640x360.mp4

Recording duration: 02:10:38. Times below are local to this recording.

00:00:00 - 00:10:00

[00:00:00 - 00:00:00]
Thank you.

[00:00:30 - 00:00:30]
Thank you.

[00:01:00 - 00:01:00]
Thank you.

[00:01:30 - 00:01:30]
Thank you.

[00:02:00 - 00:02:00]
Thank you.

[00:02:30 - 00:02:30]
Thank you.

[00:03:00 - 00:03:00]
Thank you.

[00:03:30 - 00:03:30]
Thank you.

[00:04:00 - 00:04:00]
Thank you.

[00:04:30 - 00:04:30]
Thank you.

[00:05:00 - 00:05:00]
Thank you.

[00:05:48 - 00:06:00]
Stay the lights! Stay the lights! Hi, I'm Miriam.

[00:06:29 - 00:07:13]
and just whatever you need to do to go about. How was yesterday? What was the learning? The one learning that you got from yesterday. And it could be from your customer interviews or your other sessions. The last could be from aha moments you had where some puzzles came together and made final sense or more sense. For me, it was good that Brianna put because it's more of the big, we didn't really make a really good demo ever got, which I'm for sure not ready to present, but I really can see now how that vision is becoming a reality and that's been like really like I'm so excited. Okay.

[00:07:15 - 00:07:59]
It was great to have that other perspective of how companies to see that it's like the candy, the vitamin and the paint killer. Because this is very important and also the urgency thing to it. So it was like eye open and thought that wow this is great to see it like this also. Okay, okay. Alex, did you want to explain online? Yeah, it was a bit hard to listen to. But overall, do you have any, I mean, did you sign up or not? Did you use any of the information that you learned to do that?

[00:08:00 - 00:08:49]
I think especially with them, which we never have thought about before, is the same set. Usually we talk with someone and they agree and they sign. With McDonald's the same set, we realize, okay, different recipes, different funnels, and being able to follow them up. Which we did on the spot. So, we have to have a couple of weeks, let's see how we can follow up, a lot of standardized things. We have to do standardized things, a lot more, and have different funding for people. Okay, good. How about you? So, I think the load is against the, I don't know about the demo, actually we have quite

[00:08:49 - 00:09:37]
I also loved that, according to the eyes in Spain, you saw the energy table and the screen from the Soviet Union. For example, with McDonald's, it happened at France and it was uncomfortable, it was confusing. I was able to keep it in contact with the animals behind the home workers. Is this something that you can turn into a process and also put some experiments in the way versus just like flying and see how it goes? Because I think that's what's happening a lot with people. How many of you actually show up for a call with a proper agenda? And it's a proper process agenda. Of course the call can go in the way different directions.

[00:09:38 - 00:09:59]
How many of you have that? Because based on my conversations with quite a lot of people in the room, we have a call who is going to show up and see what's going to happen. But how many of you have a proper process in place and agenda? Not always. Not always, okay. So it's all about something, you know. And right now, especially with AI,

00:10:00 - 00:20:00

[00:10:00 - 00:10:56]
can report yourself and always look for improvements and analyze one after another and keep learning from it okay um while we're talking about yesterday what have you learned with the alignment or not only in general because right now we all come together more and you can understand why we've done it that way why we have sessions after another Yeah, we changed the situation to be successful. Okay. Yeah. So, yeah. Working on demo and it's helpful to be watching. Okay. Okay. What is the... I want to say that for us, it was a daily change the way we deal with the business.

[00:10:56 - 00:11:46]
We want to expand it and we want to understand the methods. But it was an important thing. It was an idea, how to speak up. I think we can help. stay focused and have a clear direction? Yes, I think we were missing a lot of the fundamentals. We were bringing all of the customers the same. We were building the frequency. It was our goal to make. Now I think we have clear guidelines. OK. Experimental, segmented, Wi-Fi. Quality, better, better, safe. I'm glad you said it because what we teach you guys, it's fundamentals. Because you cannot go find out those fundamentals. And yes, sometimes talking about who's your customer sounds basic or talking about the

[00:11:46 - 00:12:33]
main points sounds basic and you will assume that you already have that figured out because how would you build something if you don't know what are the main points that the people have. But this is always a good reminder that you cannot go farther if you don't have it. What have you learned from the, what's the takeaway from the protection of the product finding products straight? Yes. For me, I knew the concept of product brain killer and vitamin before, but I didn't look at the perspective of latency and context. and this is something that we need to play smarter.

[00:12:35 - 00:13:14]
For us, we will just say this is paid killer and we go. This is paid for the detergent, can we increase the price? Will it be fair? Yes, of course. Okay, save the testing please. going out of the little price testing now, based on that or? Yes, it's basically the case. I love the simplicity of the painkillers and vitamins, just kind of a metaphor, I think they'll figure it to see. Also, how many talks about positioning, like the UGBA could be a painkiller in some situation,

[00:13:21 - 00:14:06]
It's a good reminder and a really easy tool for us to play around with that. So are you maintain it or are you maintain it? It depends on the ICP. The context of the ICP that we go after, but it just can easily minor, like, exactly what's the positioning. So that was really good to see. And we are looking for those painkillers, but not a lot more. And I'm trying to understand. Because that was really good to also see the higher the painkiller, also the lower could be the cost per acquisition of that person.

[00:14:06 - 00:14:52]
And also, ultimately. Does that have to be a bigger solution? Plus the retention goes, and you want to also potentially higher. For this person, we really solve something for them. He will be a lot more loyal than, okay, we help them, but that's nice. because this is really enough for energy, whatever that we chose to focus on. I mean, the thing with painkiller vitamin process is very similar to product on the field. I mean, as soon as you find where your product is, is the painkiller, you understand to whom it's a painkiller that we have to put on. Yes. Yes. Yes. It's different for emotional environment.

[00:14:53 - 00:15:40]
Yes, I mean, those are the pain first, no? To be able to factor that in your system. Yes, I think that's where people can also. There are companies like yours that institutional pain versus guys, they have to create the pain in their slides or make sure that people understand the pain, right? And then I think that it's connecting the dose now. We discussed a lot of urgency and I think urgency is contextual. So just refer back to the first thing when we just discussed that ICP and timing, why it's important. The pain can be there, but the pain time to time is changing and that's really the momentum to find the biggest, the best moment with the biggest pain, then your sales cycle will be much, much shorter and that's I think it was...

[00:15:40 - 00:16:30]
Keep riding all the pain when you don't feel... Just understand the season and the day that, how they feel and the day that's about it. For instance, speak to value. Speak to value. So, we have a strategy on how to bring to obligations within the first hour after you register. We think this will continue to be a conversation a lot. So, the moment you are at work, you have to push it. or because maybe they are looking for solutions at the same time and they can come to the solutions, right? Yeah. Alright, so what is still challenging? It doesn't have to be like about yesterday session or internet. What is still challenging that maybe you already have a solution for in the same time to sit down?

[00:16:31 - 00:17:21]
Or what is still challenging when you are like, we are stuck here, we don't know how to move forward? I think reach our real ICP and we will be the winner. So, is that the challenge? I think so. And you have or not come have solutions? Or are these best in place? We have experiments. We have experiments but we have not a solution. Okay. Yes. Yes, everyone. Maybe there is someone who has a challenge and has no solution and needs help. because that is something that is holding you back. I hope this won't take because I think the plans and now we have a clarity that what to do and what bring into the team level for the colleagues, that will be a challenge.

[00:17:21 - 00:18:08]
It's going to be the same level as our understanding. Definitely. You can always bring your team to all the office hours coming forward. I also like sharing their recording so they will have the speed back in the heights and then... Wait, we already shared some because it's not super helpful. Alright, and my last question is like, does this all come together finally? Like, do you see the big picture? Or, yeah? What do you need sometimes to... Off-road. To sit down. Because you see it's been a lot, it's been absolutely a lot. If you go to other accelerators, you will have that spread over six months probably. We know you guys are a bunch of smart people and they get out of something.

[00:18:10 - 00:18:57]
Alright, any questions, any comments, any recommendations? All good? Alright, cool. Thank you guys. Thank you. All right, so we'll be starting with the sales demos and we will be practicing what we heard yesterday from Juliana. Then we will have lunch, after lunch we will be rocking out these two weeks. Last I will give some explanation how to work during the marathon and if we have any time for the patient to close out. so make sure that you move here during this time because we need you all to be in the room to get sign-ups from the mentors

[00:18:57 - 00:19:42]
and to be ready for continuous period up to next upcoming weeks. Okay, who's ready to practice? Oh, no one? No one's ready? And we're all excited. Okay, remember this one is like practice, right? Yeah. Because you're not presenting, this isn't like a product demo, we're just going for a practicing part of your demo. Yes? Yeah. We have a EWJ so that you'll have about 10 minutes to show apart and then wrap it up. And then we'll have five minutes of feedback. And then the next person, who wants to go first? Yeah?

[00:19:43 - 00:19:58]
Great. All right, perfect. And so, OK, perfect. So you ready to do your number two? OK? Yes. OK, perfect. Means they can tell each other. OK, perfect. Upstep, who's after? Upstep.

00:20:00 - 00:30:00

[00:20:00 - 00:20:45]
Or I choose. Volunteer or be chosen? Choose what? Who's next? Okay. Think monkeys. Moonlight, task room, Fuji, Javeros. Has been chosen. All right. Do you request yourself to each other or to you? Between me, I'm your customer. Oh, yeah. Yeah, that's who I am. And then I'll be your customer. OK. Yeah. OK. Relaxing. No, I dropped my phone. Six? Six.

[00:20:45 - 00:21:31]
Yeah, we have some remote people, but if I'm going to do it, it's hard to do this. I just think you'll be doing all the stars. Yeah, just like survival show. Survival, yeah. Survival show. We started with... We started with... We started with... We started with... We started with... We started with... We should play the theme music from Survivor. Who's left? Who's been sent off the island? Yeah, yeah, yeah. Are you ready? Any preferences? Is this? You need some time, okay, all right. We just tell you . It's not quite as good. Yeah. Yes. Great. All right.

[00:21:31 - 00:21:54]
We'll go. I'll wait for that. I mean, it's a . You know, I stand over there and sit over here. So we're taking more natural . Okay, do you want to sit here? Yes. Do you want to present your screen at all or not? Maybe not, but it will take much longer. Yeah.

[00:22:06 - 00:22:15]
Here we are. Okay, so you're not presenting anything? No. Oh, it's just that thing, so it's, yeah.

[00:22:24 - 00:23:13]
And look at each other's feedback, yes? So take attention to each other's. Now we're talking. Okay, who am I? So I know, and so we're in all sense. You are the managing director of Addison UK. Okay. And we have a situation that Addison International, I mean the whole network, is pushing for Let's say, partners or you know, partner companies. Okay. And here you are. And that's the discussion. We run previously a discovery demo, not with you, but with one of your colleagues, Kate. Okay. And she actually shared with us some challenges internally.

[00:23:14 - 00:23:59]
but I'm not sure that Ms. Jennings is, I mean, how much is shared with you about this discussion. And I'm just joining on this demo. Is Kate also on the demo? No, we are just two of us. That's some sort of variety. Okay, great. And you are Joan. I'm who, Joan? Perfect. All right, I'm Joan. Just to make it fun. John or Joe? Joe. Yes. Okay, good. John, ready? Hi, John. Great to meet you. Really appreciate it to address this. How are you today?

[00:24:00 - 00:24:45]
I'm good. I'm good. How are you? I'm good today. I know that we have just 15 minutes, so I'd like to use our time wisely. But before just jumping in, can you just share what is your biggest challenge in terms of AI? Because I heard a lot of stories around the S&P. Yeah. What you are adding? Yeah. You know, I guess our biggest problem is there's a lot of new technology, a lot of new things happening. And getting everyone on the team on board and using it in an effective way is probably the most challenging. It's hard for us to track outcomes of implementing AI. Yes. Within the team or entirely? I mean, probably both. Internally and externally.

[00:24:46 - 00:25:33]
Okay. It's probably the success of what we're doing, what we're implementing internally, and then also externally. And do you have anything today? Because I had a small discussion with Kate, and she was not sure that within her field they do not use anything. they face a lot of challenges, but from your point to view, do you see something else what is already in a trial or on the table? Yeah, I mean we're piloting a lot of things as probably most people you're talking to are. And there's different range of successes on what we're able to do with different tools. So yeah, we're kind of trying not to miss out on anything that will be helpful, but also trying to balance bringing on new functionality and tools of actually doing the work we need to do.

[00:25:33 - 00:26:21]
Okay, that's cool. And why do you think, because I see a lot of push, from similar to my professional information that I'm doing, that why do you think this is happening in the market today? Why is this happening within the market? Why is it happening within the market? Why are people trying new tools or trying to work? I think that's in my opinion that's not the right direction. Just pushing AI because AI is not the goal. If you agree, AI will be a tool to achieve your goals

better. Right? And therefore I'm really curious if you have any idea of why this is happening today. I think that's a larger discussion which I'm happy to have about why it's happening.

[00:26:21 - 00:27:06]
I mean I think no one wants to be left behind. We don't want to miss out on anything that anyone's doing, right? Our competition, our competitors, or people in the market. So I think everyone's just trying a lot of things to see what works, right? And then probably outwardly talking about how successful they are in everything because that's what you have to do. We had a research on this topic with your peers and actually it came out that the main figure of that it's like how your customers are using AI. And they are using AI, you know, margins getting lower and lower because their expectation that you need to use AI and you need to lower your prices and the margins you need to lower. And therefore, you know, Osta is coming to the picture.

[00:27:06 - 00:28:03]
Like, we can help you in that. How do you help teams internally or externally with our customers? Actually, there is a longer process of that. That's a full transformation. So we are not just an AI tool, but you can choose from one day to another. But we can offer you a transformation program to being an AI service company. sound super cool but you know as a first step I would recommend if you agree you know just start with your colleague building some knowledge around that and jumping into the jumping into the most painful and time consuming task which I assume is talks related research because that's the most complex. Yeah, yeah, yes that definitely takes a lot of time on our team but like what is, do you say you do like education courses, like do you do like transfers for companies?

[00:28:05 - 00:28:55]
Actually yes and no. All we do, that's also an AI-native approach, that's you know, we do an onboarding, this will not take weeks so we are not saying that you will see results in two months. yeah you know just a week after you know every everyone will be on board with who wants to and then our system is shadowing all your colleagues and checking what they are asking and we have a model we understand we call it competent center we understand how they use ai how they how they are acting how they are adopting these skills and we are helping them individually with micro kind of We have Accenture coming in and doing an analysis of how our teams are using AI and giving us recommendations on best practices going forward. Is that similar to what you do?

[00:28:57 - 00:29:46]
I'm not sure because that's not something that we will, you know, we will just give you the tools and we will enable your whole team, not just on the researcher level but also the supervisor level, to run on your journey. So like this, what we believe that AI adoption, this will not happen on one day to another, but like this, you need to invest and then we will save you some time in the research and what you save, then you can invest in the adoption. So, I guess I might make you confused. I'm not sure exactly. Should you be like training for my team and also doing analysis on how they use AI, but then it's also for research? Yeah, I mean that's like based on the research, based on the research we will understand that how they use.

[00:29:46 - 00:29:59]
So like it's, let me just give you an analogy for that. Like if you are sick then you go to the pharmacy and you get a pill for them. But you know, maybe it's not the

00:30:00 - 00:40:00

[00:30:00 - 00:30:46]
right one like this is like if if you are sick then you know all the things all the symptoms everything so we are just reading your personal pill and take it that and then you know if you get this kind of personal pill you will be immediately better on the next day if you get just a general one it might take two weeks So you build custom AI products for teams like mine? A custom methodology, how they can adopt themselves. So it's more like a technical... But I think way into sentences it's not easy to explain what we do. Usually this kind of pitch, like just to grab your attention whether you are interested or not. Because we are a bit different than others.

[00:30:46 - 00:31:33]
that's how we are not just selling the tool, because we do not believe in product sales like Copilot and such kind of other products. We truly believe that AI agents can work together only with people. That's it. And the next step would be like a deep product demo, one hour, and then we can show all the details, step over for the whole thing for sure, but we need an engagement from your side because definitely we are welcoming. Yeah, I guess I'm maybe just a little

bit confused. Kate was really excited about your product, but I think we're maybe misaligned. So I think maybe I'll go back and chat with her a little bit and then come back. If I can hand to you, I mean, I can clarify the situation because I know that this company is really not enough.

[00:31:34 - 00:32:23]
I can either send it to you, like a one-pager, clean it up, and then you can use it and we can follow up there. Sure, yes, I'm going to roll a finger. Well, thank you. Okay, great. Okay. What did you do? Okay, so we did a little bit of a second discovery, right, for this one, which is fine, right? Whichever one of the practices will give me. What did, what did it do well and what could we do better next time? I think, yeah, this time was great. You were very complete with timing and you asked how she is, so it was not told. You tried to ask questions and not try but you opened the conversation.

[00:32:23 - 00:33:11]
What I would give the agenda was not so clear for me. Perhaps the customer would expect a real demo on the screen but you didn't highlight an agenda, that it was pre-discovery. And at some point your questions were transformed to questions of Rihanna to you. So you were not really doing the demo but she was taking the lead. And in the end, you didn't agree on the next step as a call, you just said, okay, I'll send you one page. And didn't pencil anything with Cal. Yeah. Which I am good at turning things around. So I did, I was thinking that harder for you, but what else? What else did you like? What else do you think you can do better next time? What else are you doing? I also wanted to say the last thing, like, you didn't have a schedule,

[00:33:11 - 00:33:58]
the next steps and next goals. But I mean, Joel was tough. Joel was very tough. I was like confused, right? I think if I was trying not to think about what I already knew about you and only going off of the information you were telling me like in the conversation um and i felt like you bounced around a little bit to different topics and were like a little bit more theoretical and then went more practical and then went more theoretical again on what you could do and so that felt hard to follow like just knowing that like that information i would have tried back more to what kate had said and like confirmed that like i felt the exact same thing she did and how you like tangibly help like do those things. And I would have asked how much Kate told me, right, about like your conversation, what she wanted to do for next steps, but aligned with that more.

[00:33:59 - 00:34:45]
And I would not have let me like at the end, like that was me being like, I don't understand. I'm just going to go talk internally. And whenever someone is like, I'm going to go talk internally and send me a recommendation. It's the black hole of death. Yeah. Yeah. And that's what I was thinking. I'm like, can someone get off with this? Yes or no? Right? So whenever someone does that, you want to be like, I want to take a step back, right? Because it sounds like we're maybe on the same page, like what would happen. Here's what, like Kayden said, I wanted to align with you. Here's what we were thinking for next steps. Like, does that seem like something you'd be interested in doing? Like we wanted to make sure you were on board as well, but more like direct. Yes. Yes. Yeah. Okay, good. Okay. I would like to hear more structure and I think that applies to everyone, to your product, because she was asking about the product. So you go training and then, no, we do this and this.

[00:34:45 - 00:35:34]
I think if you have more structure of like here's like three pain points and here are the three pieces of the product because she didn't understand your product and the way you explain that I don't think it changed much the level of understanding right so like just keep in mind like if Brianna will leave right now like she's like okay there are three parts of the product or there's three things that they do like so like try to put it in a structure versus just have a loose conversation Yeah, makes sense. Good practice and thanks for going first. It's hardest to go first. Good job. Alright team, you ready? Are you going to, do you want to show me anything or no? I can. Okay. It will be now on my knee. I guess you can just move the chair a little bit so I can go over it.

[00:35:35 - 00:36:00]
Yeah, so where do you want to move it? Just maybe like facing me more because then I'm okay. I think he went closer to a month. Thank you. Who am I? Okay. See.

[00:36:10 - 00:36:57]
So, you are with your set up. Okay. This house. Okay. A big one, smaller one. 115, please. Okay. Can you just take it out of it, please? Not that big, not that small. Okay. What else? So you have PLG motion and you have self-assisted motion, obviously you are responsible for the second one. And then you already have a discovery call and we

discussed something. You wanted to kind of provide a demo for all the visitors and qualify them better and make sure that your team is getting all the information. Okay so my problem is that sales team is getting leads that they don't want to work.

[00:36:58 - 00:37:53]
This one and also you might think that there are some more qualified leads that are not talking to your sales team. Yeah okay I want to say one thing even just because of the way you phrased the first thing for everyone right when um when I asked like what were my pain points for my problems the problem is never that they don't have your product right or want your product right you I just want to flag The problem is, the pain point problem is you want to have product demos, that's not the problem, right? That is a feature of functionality you offer, but my problem is that people are not all getting demos, right? And I want to make all the customers be supported to get more revenue use nails, right? Yeah, I mean the second problem is that not all of the potential buyers might get enough.

[00:37:53 - 00:38:42]
Might get enough. So that's not my problem, I don't want them to get all attention, I only want to get more of it. Yeah, for you it's more of it. Your KPIs are like a sales target. Q4 sales time. Okay, great. Okay, I'm ready. Hi, Karana. Hi. How are you doing today? I'm great. Just, you know, busy end of the week as usual. What about you? I'm also good. I see you already grabbed your morning tea. Yes. Not coffee? No, not coffee yet. That's really strange. Yeah, are you a coffee person only? I'm more coffee. Coffee and water, yeah. This is two drinks I bring. Yes. Okay, so I know that we only have 10 minutes today, so I want to be on time.

[00:38:42 - 00:39:32]
Are you still good with this time? Yeah. Okay, so I want to just get back to what we discussed last time and then show you how we can accomplish it with our solution. And then let's see if there is a next step we can... Sounds like that. Okay, good. So just to sum up what we discussed, you wanted to have only qualified leads getting to your sales and you need better filtering on the website because you have a lot of demand and sometimes these leads are not qualified and they can be meetings on your sales account. Yes. Alright, so as you remember we do product demos and sales demos on the website and that's

[00:39:32 - 00:40:00]
how we can support you with that. So let me show you first a couple of ways how we can integrate on your website so you can understand how your visitors can interact with every normal. This one is on our website. You can see that it can be very prominent as this one. It's not supposed to be formed this way. So it can be just like a button.

00:40:00 - 00:50:00

[00:40:00 - 00:40:52]
right? It can be a demo button and your visitors can choose. It also can be a widget like this, but if you already have a widget, maybe on the then that's for it to come. Yeah, so then in that case it can be just like a most integrated button. Oh, interesting. How do people usually do it? It depends. I would like to show you a couple of examples. For example, there is a dedicated page that one of our customers created for the API demos. They write a portion of their traffic to this dedicated page. But in that case they qualify them in advance. so they have some critical application and land their priority list on this page

[00:40:52 - 00:41:39]
so you cannot spend time on that another customer they have this type of integration plus the avatar It's clear that it's AI-gabit group. Oh, interesting. And as well it can be animated avatar like this one. Which one of these has the highest conversion rates for your business? I think it's the widget, the avatar, or obviously the one that we have because it's hard to miss. Okay. But what do you think for your thing? Yeah, I think it's interesting. I care most about what is converting the most. So for customers like me that you have, you said the widget or this main one are the most ones.

[00:41:40 - 00:42:28]
I think this will probably be hard to convince our marketing team to change the landing on this, but I think we could definitely do a widget that would be interesting. Yeah, I think so. Some of our customers use a couple of integrations. They have an integration for example, Nidget, they also can get an instant demo file right next to the book of them. And in some cases they also have a free trial, which I know you also do, and they also put a pop-up and a button within the free trial. experience on these trial users also get a chance to talk to somebody. Okay, tell me more about the person that's doing these demos for this.

[00:42:29 - 00:43:14]
Does it feel real? Do customers like it? What is the response like for it? So we usually have very high customer satisfaction rate. It's 5 out of 6. So they can choose 5 by default. So that's why we have very high satisfaction rate in terms of the demos itself. We are constantly improving the rewards alongside with you to improve the demo experience with all the people we are getting. Do you have any numbers on increased revenue targets that people are getting?

[00:43:15 - 00:44:00]
We do not track revenue specifically because what we care the most is qualified by them. We are creating a net new pipeline from the leads that they never touched before, the smaller ones. And usually you'll have around 20% of qualified leads from the demos. Okay, when you're working with people like me on the sales side, do you usually get the marketing teams involved? Yeah, that's what I want to talk to you in terms of the next steps because usually what we see from our end is that somebody from the marketing team is usually involved also the security team and procurement companies.

[00:44:00 - 00:44:49]
So do you think it's going to be the same in terms of your decision? Yeah, I think we're not going to make any changes on the website without talking about marketing. So like marketing has to be involved. And then internally, if we both agree, like moving things forward, we have a joint budget that we use on new tools and software. So I think that would be interesting for both of us. I think when we're paying counter-part, Christina would be really interested in seeing this. If you could set up a call with her, I think that would be nice, because she would need to approve before we could do it. A question for you that I have for the revenue or what this looks like for the sales team. Do the sales teams ever talk to any of these users after they go through the demos or they just are separate on their own pipeline channel?

[00:44:50 - 00:45:39]
Yeah, so our goal is to actually qualify those ways, to qualify the prospect for you and also to help them to qualify your product for them. and if it's a mutual qualification then Nauma will book a call on yourself to the record so they will have this additional guidelines that's I think what we care about and we are going to be qualified not the random ones and as I said it might be like an additional Do I set up the qualification criteria or how does that work? Yeah, we worked together during the onboarding period, so you will help us to set up the issues and obviously you will use your qualification criteria and the qualification to actually qualify them.

[00:45:40 - 00:46:26]
Okay. And you said about your CMO, so maybe it would be great if you can put her all right now, do you have her ability maybe? I don't usually book things for her but we can tentatively book something and then I can play. And if it doesn't work for her, you can just move. Great, let's do that. Next one at the same time? Sure, that sounds good. Okay, perfect. Great, thanks for your time today. Thank you. Okay, great! Why did she do well and why did she do better? It felt he is in charge of the conversation.

[00:46:28 - 00:46:47]
He is in charge? Yeah. I felt otherwise. You can still answer that. There's something, I mean this is perception, but in the last with Attila and Dima, we are not in charge. It's like sometimes, I mean like in a group setting, more than two, there's one region always.

[00:47:05 - 00:47:50]
I think you did a good job like coming back to like getting the next steps and getting I think one thing I would have made you like to see a little bit more like of the product and how it works. I did like your product demo when you showed like me like interacting with it, which maybe you could give more than 10 minutes. I wasn't sure the audio is going to be. Yeah, yeah, yeah. No, totally. But like that part of the conversation is no more specific. Yeah, yeah, yeah. No, but I think you did. I think you did a good job of getting it. You had things that you wanted to focus on that you wanted to make sure you hit. The one part that I would have liked you to tie into is when we talked about how sales teams would get the leads or get notified.

[00:47:51 - 00:48:36]
I know for this you wouldn't get it at all, but if you just said something like we push it directly into your CRM or we connect directly to this to just close the loop on here's how you get them. Adding that one little thing would have been nice, but I think overall you would have been connecting to yourself. I think when she asked about the revenue, like you are not tracking it right now because you don't have the data from the customer side. So you can also, because

you said, oh, we don't do it right now, but you could also say if this is something that you would like to get metrics on, we will have to get information from you. So get your commitment on that as well. But you can track it. It's just like she will have to provide you the data to track it, right? So maybe try to improve, because the revenue is really important. Right. Great. Any other comments? Okay, great job Tima.

[00:48:36 - 00:48:54]
Thank you. I remember. Yes. That's why you did it. I see Tima. Alright, next. Laura, perfect. Who am I?

[00:49:02 - 00:49:48]
Who am I Laura? Today you are based in UK, you are responsible for sales of multi-brand importer in the UK and EU. Okay, any of you? We have a portfolio of many Asian brands. And European brands, but mainly now the new ones are cars, the new ones are chains. And you spend a lot of time on hotline and answering tickets. How many people do I have that are in the streets, or just me? Just three people in the team and 500. And 500 dollars. Across a few countries, that would matter. Okay. Okay, great. Perfect.

[00:49:49 - 00:50:00]
Hi, good morning. How are you today, Nils? Hi, I'm great. Thanks for asking. Thank you for making the time. We have ten minutes, right? Yes. And for today's agenda, I propose

00:50:00 - 01:00:00

[00:50:00 - 00:50:48]
that we are going to go for the quick part of the upcoming priorities. I'll ask you questions, show you our platform with few real examples and then if you are right, we will discuss more next steps. Would you like to add something to this conversation? I think that was good. Okay, cool. With now last exchange on the date show, you showed that you are in the early stage and you are tired and your team is tired of answering questions again and again. Yeah, we have so many questions, I am tired of answering the same ones. And you mentioned that you spend too much time to prepare for your meals for your meals. Is it right and accurate? Yep, yep, that's still happening. If you would choose just one thing, trainings or answers, what would you choose today?

[00:50:49 - 00:51:37]
Like which one takes the most time? Which you would fix today? What I would fix today? Probably responding to dealers. We have just over 500 dealers now and it's a lot to manage and get back to them in timely manner because when they ask a question they usually need to know right away. I see, we have similar customers in France who is managing 560 dealers and we've helped them within 3 months from onboarding to the system to decrease their 40,000 tickets from the dealers by 50%. Let me show you how we did it. So they had fewer tickets that they would get? They had 50% fewer tickets as before they were repetitive and they would buy their tickets. Yeah, technical documentation which you have and I'll show you how you can upload easily this technical documentation

[00:51:37 - 00:52:24]
in the system so all the information is kept in the same place and it's structured by the technical documentation by the model and we help you to upload it within a batch or we migrate it for you and have a lot of more things. So then my reps like search through that documentation to give answers to the dealers? Exactly. So here's how it works for our customer. You have one information in one place and then your dealers are typing over the system their questions to follow you again and again. For example, you would ask about your new model, the dealer would ask, tell me the starting and shifting checks.

[00:52:28 - 00:53:29]
The system is preparing you the answer. It would ask you the questions, if it doesn't, you see there are two terms in the system and we already tried to get. and we'll give you the trusted answers, recited information and exactly the original So my agents type in the questions and then give it and close the tickets or can the dealers just use it themselves? They can use it themselves, they find the clear steps for the procedure, they find exactly the page in the manual and if they don't have information they escalate it to you. I have a question, how much time do you usually spend to find the information when you have a ticket from it? Yeah, I mean that's a great question. Depends on how complex the question is. Sometimes it takes us forever to find like an answer in the manual because there's just so much documentation. Sometimes it's easier, right? Sometimes it's quick. Maybe they've answered it before, but if it's like a complicated technical question, then I only have to find it, but have to understand what it's saying and then translate it back to the customer, which takes more time.

[00:53:29 - 00:54:17]
I see. So we can definitely have here at Cloudworks and another thing that our customers love, the same information can be transformed to the full course and training. So you go to go through one stone and you have your training and training set up just when I'm loading the recommendation. Oh, interesting. How long does it take to set up? Typically we can set it up for you within two or three weeks when you onboard it to the system. We help you and we are applying our people to make sure that it works. It depends then on your sources and priorities. For some customers in this particular case it took roughly six weeks because there are some other cases and teams needed. Don't worry, we help you with that and if it's your current priority it will be up and running within a few weeks.

[00:54:17 - 00:55:05]
Here is how it works. And the same answer that we just asked the assistant that we found here and what our customers love. It could be added to the certification and assessment of your deals. So you know exactly what you know and what do they know. So do you do onboarding of my dealers also for this or what does that look like? We do prepare the documentation for onboarding. So you are running within a few weeks to send it to them. The link that you send to the dealer can be found here, you just simply send it to the devices WhatsApp or emails, whatever you prefer to communicate to your dealers. And what our customers love, you can actually edit the course easily so that you don't spend time. And you mentioned that we spent a lot of time quick to prepare another course.

[00:55:05 - 00:55:51]
What is the course? The course in our system is the object, it could be one course or learning track, in this case it's one course. but the algorithm that we have is preparing the full learning track for your dealerships as some topics, as you mentioned, will be very complex. And I have a question to you. How much time to the day do you spend preparing these courses, if there is a new one? Well, I'm not doing it, but somewhere on my team is. I know there's a new launch. They probably spend a couple weeks putting together all the documentation in a way that makes sense for the dealers. These are preventing you from launching quickly. I haven't thought about it, but I guess with the launch faster, if they could do that faster. They can help you here. Are there any questions for them?

[00:55:55 - 00:56:39]
I don't know if I have a question specifically. I guess my questions are around the training of my employees or the dealers. like you mentioned we send them documentation what if i want you to train my dealers like can you do that um we can help you to train the dealers the system is self self-service you would love it and we are having with our customers weekly check-ins so that we make sure that you and your team is being comfortable with using the system but you won't do a training with the dealers we won't do the training okay okay and typically our customers love that you are in charge of control okay i see Okay, now this seems pretty interesting. Do you have any blockers from implementing here today?

[00:56:40 - 00:57:32]
Do I have any blockers? I mean, I guess my three team members that are doing a lot of this work, I would probably want to make sure that it makes sense with them since they're doing it. Do you think the next step would be the large demo to get a new free members? Oh sure, yeah, I think that would be great. um if you walk them through what that would look like and like um what their role would be i think that would be amazing how about next week um sure yeah okay do you come time on wednesday um yes perfect let's do that okay great thanks for that okay let's get it all we're gonna do better very good i i just the details i like that So, not contrary, but it's just for insights. I think I noticed that everybody says, oh, we only have 10 minutes, so I'm going to make it work well out for you.

[00:57:33 - 00:58:20]
Like, I think it's not at this point because sometimes you frame 10 minutes and then you want to rush to it and you tell them in the brain that you only have 5-10 minutes. But what she did was, these are the agenda, and she asked about if there's anything to be added, so you reframe it, reframe the competition earlier. I like that because then your spreadsheet knows exactly what the framing is for. And I think she's in charge because when Rihanna asks her questions, she asks a question back. And I think every question is all about asking, you know, what could cost perspective, right, time span, is it hard, etc. We also asked for, we also put a call next week, which is amazing. I like your demo. I think it's short-clutching. I think that's exactly what you're trying to do.

[00:58:21 - 00:59:08]
And there's some nonverbal element in there. Like you put two persons and they ask the same question, the nonverbal element makes a huge difference. But that part is really hard to replicate. Some still person are just like, they have the nonverbal. Okay, anyone else? I loved how you are pushing on the next week to schedule a call I was

thinking maybe one thing, maybe I don't know, just an idea you asked her about are there any others? I get it. Maybe change it, ask in a different way because if you subconsciously tell her to look for objections she will look for more

[00:59:08 - 00:59:55]
so maybe like reframe that question in a way where it doesn't go into negatives more positives i don't have the right answer but that just kind of psychologically didn't sound best for me first i'm just thinking out loud for everyone like if there is a way to leave this conversation so they get more yeses from you. Is there something you're interested in? Yes. If there's something in your batch or trench, yes. Is this really answering the problems you have? Yes. If you say five times yes in one conversation, that will get you closer to the final yes? Yeah. Yeah. Like we discussed yesterday, more yeses, right? You want them to agree with you to get to the end. So then it's like, do you actually want to use this? And then

[00:59:55 - 00:59:59]
the answer is yes, she would say yes, but it was good. Good framing for the timing, like

01:00:00 - 01:10:00

[01:00:00 - 01:00:41]
for the, like we have 10 minutes. I felt like we were a little bit rushed, but maybe just because we had 10 minutes and you like kept going and I felt like we didn't have enough space to jump into questions. I was like, okay, I'm happy. I was afraid if you will don't. I was like, I have half a second before Julia is talking again. I was like, no, this is not good for you. So that, make sure you give like space for people to like ask or say things, but it was good. I think you led the conversation well, you went through things well, you answered questions well. I think that was nice how you paid luck. So great job. Good job. Woo! Yeah! Okay, perfect. Yes, we're going to take a call tomorrow, but we should be sure to text you.

[01:00:46 - 01:01:32]
All right, thank you. Okay, you're going to miss again. No, you're going to be great. Sure, so you are. I think the easiest would be if you stay Brianna. You are a coach, you have around 20-15 clients. You only find out they slept poorly before the practice. You are completely overwhelmed with a lot of communication channels like whatsapp and sheen it's kind of overwhelming so that's kind of a pain point okay and you also like don't have any like one dashboard

[01:01:32 - 01:02:17]
where you can track all of your clients like how they've slept the nutrition the nutritional photos this is all across scatia because like instagram what's up okay also the same thing for you the same feedback that I gave someone earlier. The problem is not your solution. The problem is not that I don't have a dashboard. The problem is the second part where you said where I have all the data and information everywhere. Your solution is to give me a dashboard. Yes. I'll just try and frame the problem. No, I just want you to always frame it that way. Okay. Okay, I'm ready. Hi, Brianna. Hi. Yeah, it's great to see you. How was the holiday with your family? Did you have some good time? Nice, I had a lovely time. Thanks for asking. Lots of baking and lots of outside part time.

[01:02:19 - 01:03:07]
Had a bit of pause from your clients and everything, right? Yes, yes. Hopefully they didn't take too much of a pause. Let's get them back. Thanks so much for taking the time. Last time it was really interesting for me to kind of hear your perspective towards your pain points. So I think last time just to confirm so I can fully understand one more time so we can proceed. You said you have your clients, you really don't have a lot of state data around your clients, right? Like you get that feedback really late. Yeah, like right before our session. Yeah, yeah. And that means you can't really prepare like adjust the session in time. Right. One of the problems. Yeah. Then also you said you have a lot of communication channels across WhatsApp and email, it gets really messy.

[01:03:07 - 01:03:59]
and you don't have like it's really overwhelming. It's chaos. Yeah. We actually prepared a really good demo that you learned for. We even have your name there, Brianna. Just like make sure it's like really personal to you. And even we uploaded all of your clients already just like make sure like you see how we can personalize and make it more fun, engaging for you. we put in the time so i just wanted to make sure you can see that yeah because we are really faculty working with work fast i can tell you with something that we could appreciate so at least we have free very cool yeah um so we have so this is kind of a dashboard that we prepared for you so basically as soon as you log in you see it will see you have slot forward right and you can like see that right away you can literally open her dashboard here and

you can see her hrv this

[01:03:59 - 01:04:49]
morning was really really not good um she even put in like she slept for only five hours and her hands she also moved out so i think having a really simple overview for you yeah could be so beneficial because you don't have to like ask her before the practice or text her on whatsapp like every morning like manually right and like this every morning you get this data phone oh bravo like this yes oh interesting okay yeah and you see them everybody you see them here everyone so every morning you can even have like attention like you should take a look at this person today to your best prepare. Oh interesting and then do you show me like trends? Sure so you can look here for example here at the last seven mornings and you see potentially this person how like for example Lutia was clearly not recovered today

[01:04:49 - 01:05:35]
so I think it would be so helpful to you just have this data point. Interesting. How do other trainers like me of needs to say that like how do they... Sure, so since our last conversation we've already on boarded three new people which is so amazing. Oh, great. Yeah. Thank you. So they're actually focused mostly on again getting this morning recovery release because it's really hard for them to see this data point, right? Because they can prepare and because three sometimes your client doesn't really know, right? Like, am I recovered the best? How am I doing today? and I think through you have this data point even for other coaches they know exactly through their physiology so you don't have to guess so that's very important other thing that they really like is that you have their nutrition here

[01:05:35 - 01:06:23]
so you don't need to check their whatsapp and like look for their nutrition lunch and dinner you actually see it right away you also see their history and as soon as you get this you can also give feedback Oh, do they also have access to this? Like can they share? Yes, they have their phone. Actually, here's their client experience. Like here, everything. I'll share with after as well on the night. And you can like literally see everything, how it looks for them. So they have their own application as well. Plus you as the boss, have all of the overview here in this one data point and that part. And so you literally see like the nutrition, but not just like, because sometimes I assume your clients can like lie to you. right like they may be saying like i ate less versus they ate more and so like here you literally

[01:06:23 - 01:07:11]
see like okay it's not bullshitting like it's bullshit too yeah okay cool so i think this is valuable do a lot of the other trainers that you've onboarded are they using both like the training and nutrition component of it sure yeah so every they are using everything not everybody has the same features because we have different price styles right so one of is like a higher version for example where we can unlock more features like some of for example the nutrition one it's like a higher paid version versus the recovery is like a lower cost so depending on your budgets and your needs specifically but we have both we have coaches who do like the full version and then we have people who are only looking at their recovery scoring like all of them more basic stuff are most of the coaches paying for it or do their clients like pay for it?

[01:07:11 - 01:08:01]
So it's paid by you as a coach, so you're paid for anything. And actually it's good because we have a really good deal right now. We are onboarding five new coaches in your area. So it's 49 US per month for you for any amount of clients that you have. And so I think this is something that could be really beneficial for you. So we have this deal done for the next two weeks. So if this will be interesting to you and you really see the value, we'd really love to have you on board. Do you have a free trial or something? I'd love to see what some of my clients say about it before I... Everybody that we have on board has gone through free trial and 85% actually purchased as a pharmacologist perspective

[01:08:01 - 01:08:47]
because they really see the benefits because it takes away it gives you so much more time to really focus on what really matters the most which is is for you caring about your customers or your clients getting better right doing your business and you shouldn't really focus on the bullshit stuff right yeah um okay interesting yeah i'd love to get my clients feedback on like um if they would find this value or not I think it would be interesting, would maybe set me apart from other trainers. Yeah, really to get like... And maybe lastly, what would really, besides this, because we want to work with each client personally, so what else would you think could be so beneficial for you? Like what else could we work on together during your trial to really get you even more seekers, even more value?

[01:08:47 - 01:09:34]
Yeah, I think if there was some suggestions on like what I should do with each client, like before in the morning, based

on their biometric data, right? If we were like based on what they've submitted, based on their biometric data, like here's the thing you would suggest to them for the week and if I could like send that to them or have it before our session or do things, like I think that would be interesting. I would love that. I would also maybe like, do you like white label? Like if I wanted to fill this out for all of my customers, could I have white label? Yeah, everything that you said, my technical things are working on. so we can actually give you some preview on these features and i would really love to have your feedback with support us feedback from people like yourself is the most beneficial

[01:09:34 - 01:09:59]
yeah so if you can get that feedback and work together on everything you can really tailor the best tool for you yeah so you can really grow your business save time and get more clients okay cool thank you thank you thank you great okay what can we do better next time No one has any thoughts? I love that word.

01:10:00 - 01:20:00

[01:10:01 - 01:10:47]
Something new. Two days ago came to this program. Two days ago! That's why this looks shit, but like... But the concept is great. Because... yeah, thank you, thank you. I'm happy. Guys, come on, give me something. No, no, thank you guys. Guys! But we did not plot the next... Next up. Yeah, I was asked, I was wondering if you put the next card. Yeah, no, no. No, I want my time to see it. I need to learn from you, Leanne. Yeah, yeah, yeah. Tomorrow, yeah. Tomorrow immediately. Like, today looks on 4th up, right? Yeah. But it was good. I like how you had a nice opening. I like how you walked through my pain points and things, how you asked if there were other things. I would just be careful while asking what other things you want.

[01:10:48 - 01:11:33]
Because customers will be like, well, now that you've asked, here's like my perfect world of all the things you've ever already built, right? My strategy was obviously coming personal, because for me personal issues is important. I wanted to establish the yeses with the pain points like yes, yes, yes, this is my pain point and I'm going to continue. That was kind of how I think was the right strategy. I forgot the closing. That's okay. No, I think it's good. I think like, I know it's early, this product is like early still, but I think having some like tying the loop of like here's how people use it like functionally and here's how it helps their business right because I'm already charging like an hourly rate or I get something right like two dollars per customer that I have per month is not that much

[01:11:33 - 01:12:18]
and if it adds more value than that like just showing like what the value would be right so you have like 20 customers and it's 50 dollars a month so it's like two dollars you they're like would you and your like clients get two dollars of value with this like for the month is like I felt so uncomfortable telling you about pricing because how many I position in my mind. So like this could be helpful. Like sending it through your lens of value versus I'm asking you. So like, hey, it's a thing. Yes, yeah, because I think right if you're offering like a service or differentiating or doing some other things like that is like positive for people, right? If they can differentiate and it's not more expensive and you give them so much more. Like, yeah, but good. And I'm talking about the last thing, but we forgot to schedule the call. Oh, I forgot to get told.

[01:12:18 - 01:12:51]
Yeah, I will send an email. Okay, perfect. I just want to mention, I think at the end when you asked her how else can we work on it, I think you can go about what are the results you want to execute with that. Is that what you wanted to say and just get a person? I basically, I was curious, like really get even more feedback and like how we can even make it better. So like she knows we can personalize, we can be with her we can work with her like we are not just like whatever like we don't care basically yeah thank you

[01:13:05 - 01:13:51]
and you're and you're uh operations uh manager okay for a kid's school Kids school? Franchise, like a music musical, kids school. Music, okay. Yeah. Great. So you're responsible for supporting franchisees? Uh huh. How many schools are there? How many? Uh, 60. 60? Okay. What are my points from our last call? We called you. Oh, you're called? Okay, great. I'm ready. Yeah, hi Brianna, how are you doing? Hello, I'm great, how are you? Doing great, doing great. So it was really insightful conversation. So last meeting we discussed your challenges, right?

[01:13:51 - 01:14:38]
So you have your franchisee is always asking you about what to do next, what is the campaign and also they missing

calls from parents, right? so these things and we prepared demo to show how we can handle it yeah and actually we also created demo page for you so this is your logo page for Mark to work in Washington and you can play also so we can call to this location So do you want to play a role of parent who is scheduling a call for this group? Sure. So this is your product that I can call.

[01:14:38 - 01:15:27]
Yeah, this one is a widget. So this is type of the widget, web to call. And yeah, so usually they also can call. So this is one of my franchises? Yeah. And they, like if parents want to call it. Yeah, so basically this is your website. And on the website it's your local page. and you have different channels or different ways to connect and implement the knowledge which is one of the types of functionality to find people. Okay. So let's try. Thanks for calling Locke to Rockport, Washington. How can I help you today? I'm trying to understand if my students can get clarinet lessons, or my kids can get clarinet

[01:15:29 - 01:16:18]
lessons. Yes, we offer music lessons, then clarinet lessons may be available. How old are your kids, and would you like help setting up a visit to discuss lessons? There are five and seven. I want to understand what the lessons look like, how often you offer them, are you flexible with scheduling? I don't have the details on lesson format or scheduling flexibility, so I'll have someone from the team follow up with you. May I have your name so they know who I saw? Brianna. Thanks, Brianna. Is there anything else you'd like me to pass along to the team? No, if they can call me in the next 10 minutes, that would be great. I'll pass along your request for a call within the next 10 minutes, though I can't guarantee

[01:16:18 - 01:17:09]
the timing. Thanks for calling, Bog, to Rockport, Washington. Okay. Yeah. So this is examples. Okay. So time to set up it. Yeah. And connect it with your system, where there's all the scheduling and information about like available spots. And inside the platform, it looks like that. so you can see all the holes that happens in your locations and how AI handle it obviously this one handled badly but we just need time to stop it with your system and also so this is our first agent because AI receptionist and another agent is working with your franchisees. So for example this location, a question about what campaign I can launch

[01:17:09 - 01:17:10]
in Pompato.

[01:17:23 - 01:18:11]
And it has all the information from your playbooks. So we used your website again, we uploaded information from previous campaigns that you have, social media. And in this way your team, how many have you in your franchisees? There are six of us. Six of us, wow, it's a lot. We have a lot of things to do. Yeah, and now we have another one. I work here for your team. Answering any questions that your franchisees have. And if it doesn't have an answer, you can connect again for WhatsApp to you, escalating to one of your... So there's an area where my franchisees can go

[01:18:11 - 01:18:57]
and ask questions, but also you help with the front facing things for the franchisees? Yeah, so basically it's two different actions. so one is for external communication and this one for internal video network with franchise owners. And we have others so we can set up others, we can activate marketer and sales HR and helping franchise owners to hire other teachers like who is teaching like guitar or something else and also make variation during the call so yeah and all of that is based on your company brain so it's a cloud you can connect all the tools or all the playbooks

[01:18:58 - 01:19:45]
and the more you upload the smarter it is okay yeah so what do you think about that? Does it like books that can cover these two problems that we discussed? I think it's interesting. I think I'd like to hear more about like how you work with other franchisers like me on like what outcomes they see from implementing something like this. I mean it's all about saving your time and I mean if you talk about people who are for them so you mentioned you see that sometimes directors of work locations they just missing goals, missing potential students and missing revenue

[01:19:45 - 01:20:00]
so this is the idea behind that and also we are working to add functionality to so they can re-engage, right? For example, if you have a trial, you have a five or six trial in your schools and they try and

01:20:00 - 01:30:00

[01:20:00 - 01:20:45]
they disagree, right? And we need to go back that. So this functionality we can also add and it can also bring you more students. So can you build like anything that I'd like from my brand? I mean it's a product, right? So we have pre-built agents, you can adjust. But also we are VC-based startup. If something that you request we can use for others, we can build. Okay, interesting. What kind of results do other people see from using this? How many other customers do that? We just started four months ago, five customers.

[01:20:46 - 01:21:36]
Will you be around in the next few months? Yeah, for sure. I built a company before, you know. And goals? No, no, it exists, it's working. You never know with startups. I hear all the time about all these startups that just spend all their money and go out of business so fast. How do I know you don't do that? Yeah, I mean, because I did it before and my previous business worked. Thanks to the question. Yeah, I mean, all good, all good, we raised money, and we are lean team. I think I'm trapped. Yeah, so what I suggest, we can test it with one of your locations, right, because I think

[01:21:36 - 01:22:22]
this is important to get feedback to set up everything perfectly and run this demo, this allocation because you usually have this customer like a franchise advisor who will make decisions together about implementing new tools and our process looks like that so we need two weeks to set up of your campaign and your first agent And after that we can roll out. How much time do you need from me? Because our team is pretty busy. And so this seems like six weeks of work. How much of that do we need to do? Because I think there's a million of the capacity to do a lot of the setup. I mean, we just need to connect to your existing tools.

[01:22:23 - 01:23:12]
So for example, we have a training system, like TrainAll. I remember from the previous call, we used TrainAll. So it's easy to connect to TrainAll and we get 90% of the information. and we just needed another call after that to show you set up system and we decide you can film what occasion you want to try. So is it like 30 minutes of time? Do you need like 5 hours of time? I think in the next two weeks it's just 30 minutes of your time. You know that after we decide to go with the AI workers, we need to roll out the max mark for all the networks. And we can handle it. We have the capacity to train, to set up and onboard all the franchises.

[01:23:14 - 01:24:04]
Okay, that's interesting. Alright, so yeah, maybe let's get to our next meeting. How is your schedule looks like? I think maybe if you want to chat with my ops team and see if they think this would be valuable in helping them, then you can go from there. So I'll email Andrew to our lead ops person and then you can set up something with him after this. Super. Okay, thanks. Okay. Alright, okay. Well, how do we feel? What do we do well? What do we need to improve on? What would we do better? You need to have more confidence. All it might be is like, I don't know, you know, like, and we ended up to over the whole thing.

[01:24:04 - 01:24:49]
Yeah, second part was not good. That's the number of what I'm talking about. Like, it's just, when you present your products, like this, this, and, you know, whatever, I'm like, basically, it gives the way that you can have a lot of power. So, yeah, I felt it's also quite, the way that you, maybe it's just the way you talk, or whatever, I'm not too concerned about the things you talk about, or the way you talk about it. So, yeah, and it's like, it's very passive. is like even when we ask for a meeting, the question is, what's your schedule looking like? You should just propose a time of effort, like it is not the time of effort, as you can tell. But it really is an ultimate question.

[01:24:50 - 01:25:35]
Yeah. Power is on the timer. Thank you. I think when you said you are like feedback or something, you started a thing. I mean, Brianna talks about it. like reception right like even if you're small show your huge your massive like that reception again and i think if you're if you're leaving with you are a startup that's very tough especially for something something like this i assume maybe for us different or this type of like franchise business they don't want to know that you are a startup that doesn't have money um so let me just say your dad had so much money I'm not going to be talking about it. So what do I want to say? Or say differently, like you said, for customers, we have, and the four customers can have 20,000 users, right?

[01:25:36 - 01:26:26]
Yeah. So we already have, we already have 20,000 users, or we already processed 20,000 transactions, like go with the multiplier of the four customers. I think because you said, like, we're a startup, and then I latched onto that, and then I got you, because. You did that. Yeah. And just last year, again, this is just me. it was very clear that this prospect right now was not interested from my perspective the body language is not there and you asked her when should you talk next it just sounded like you are completely not seeing her body language and not understand her as a person and I think that just didn't sound good to me like how maybe to try different goal to action based on her body language. So for example, I would add this objection particularly where you are a startup and what might happen with you.

[01:26:27 - 01:27:13]
And I handle it differently. It's usually work for me, just being honest. I usually say that, hey guys, there is pros and cons working with startup. And all these are reasons associated with that. But we are more flexible. And that's why you can expect way more faster implementation, way more flexibility. Yeah. If it comes up, but you don't need to bring it up. Yeah. Yeah, you don't need to. To say that you're a startup. I also would have liked you to frame your product a little bit more for me. I think it was because I was only going off of what you were telling me, and not what I already know about you for this. And it felt confusing for me because you didn't frame or intro it as like, here's how we help your franchisees and ultimately help you, right?

[01:27:13 - 01:28:02]
And then here's how we help you manage the franchisees. You were just showing me the product. And then I was like, okay, so this is for the franchisees. And then it didn't connect to how that helps me. And then you showed me the thing, but it didn't connect to like what I care about, right? You just went in and showed it to me, but didn't like tell me what the value is. And then when I asked, right, like what results you look at for you, well, you save time. And I was like, okay, then I save time. But like, am I like tying it to something, whether I need to hire more people, I'm getting more friends, like I'm expanding the franchises, I'm like, what is it that I'm like doing that you are tying to? Because you have a lot of modules, a lot of things you could do, but walking you through a workflow of like your team right now is answering like this many like inbounds from your franchisees a day, asking them questions. Like here's, we can take that completely off their plate, right?

[01:28:02 - 01:28:48]
How many questions do they get a day, right? And the same with the other one, you're like your franchisees, we give them this tool to access, right? Like how many calls are they missing, right? On average, franchisees are missing like 12 calls a day, right? And that's like X dollars in revenue that you're missing out on, right? If only, even if only half of them convert, like that's how much revenue you're missing. But like tying real tangible things to each of them, I think will make it more concrete for me to see what the value would be, right? Because at the end, I was just like, I'm gonna pass you off to other people on my team because I was like, I don't see the value, maybe they'll see the value, I'm just gonna pass you off to someone, And you don't really want to be passed off to other people unless they're like higher or like approvable you want to like keep me in the loop, right? Because like if I don't see value and I pass off people then they have to convince me that it's value still, right?

[01:28:49 - 01:29:35]
So when you were talking about like, she asked, like, so how does this work work? And you started showing about the school and then that they have an event. So if you're talking about case standards, say, and because of this tool, they were managed to launch that event and generate extra $25,000 for your organization, right? Versus like there was an event. So just tying more to like results and benefits of what they get or solving a problem on that, right? And because of like, because of maybe people who are not aware that there's an event, this is that $5,000 that they will not make. So you can make a point why we're even talking about this. I think it was better than the first. Like that was negative, the other part. So this is better. I think still some improvements, but it was better. Yeah, so you've been a lot since we last did it.

[01:29:36 - 01:29:59]
What I wanted to share is the startup connotation thing. Justina recommended us to talk to our customer, not to mention that we are a startup. To say we are a company in the growing stage, we are present in the US, Canada, or other, and we are going in Spain as we speak, something like that to some people.

01:30:00 - 01:40:00

[01:30:00 - 01:30:46]
you also mentioned, oh, we are only from once present and only five customers. It sounded pretty small. You can frame it in a growing snake. I can't you? Yeah. I would even say that don't even mention, and I wasn't the value of mentioning, it's just giving one more objections. You may care. Yeah. The only thing you care about is the value of the value. But when we talk about it, it's obviously easier that you said you don't want to say that you're a startup. Were you just nervous staying in front of here? I think that's why I'm running still not to be jealous but kind of this feedback conversation. I need to change it. Oh good, good job, Al. Thank you.

[01:30:46 - 01:30:50]
Thank you. Thank you.

[01:31:01 - 01:31:45]
All right, my chatterbox. Are you ready? Okay, come on, you're in here. You're a solo founder that tried to use some tools, but some of them... To do what? To build some of your applications from your mind. Some of them are not in quality. Some of them you don't finish. For some of them you try to use freelancers for... Am I technical or not? You're not technical. Okay.

[01:31:48 - 01:32:37]
Is there a specific type of company or any company that I feel like? What am I trying to build? What kind of company am I trying to build? Maybe just ideas like workout planner, or Scum. You mentioned that you want to make applications, Scum and applications will tell how old is the person on the photo. How old they are? Okay. Hi, how are you today? Good, I'm great. What about you? I'm good too. May I ask a few questions? Sure. What is the best idea you want to build and try to build through the different ideas?

[01:32:37 - 01:33:26]
Best idea? I mean I have many best ideas. I guess what I'm working on currently is I want to build an app that you can take a picture and it tells you the age of the people based on their image for skin care clinics. Cool. What was the timing to start from idea and to build? How many time did you start for it? How much time? That's a good question. I mean, I feel like I like ideate and go back and forth and then I like start to build and I have other ideas and I get distracted and then I go back. So probably, I don't know, maybe around the months. Aha. And did you try to connect some freelancers or some development teams to build it?

[01:33:27 - 01:34:16]
Not this specific one but other ones I have. Other ones I previously did I've hired engineers to build out or design like an app for me and then build it out. I used like Bubble. And which AI tool you try to use, not about development but about inside the PI inside your application? You use for example tokens from OpenAI or OpenRobot? Yeah, I go back and forth. I was using cloud, now I'm using chat tpt but I'm thinking I might go back to cloud with it. I mean not about building, about put AI for recognizing inside the applications. Yeah, I use an open source framework that someone told me to use.

[01:34:16 - 01:35:07]
And so I had a developer put it in for the facial recognition, like a data set from MIT. Do you know that some companies in the market can give you product in one place where it can help you to build your product with their tools inside? I'm not really sure what you're asking. For example, if you want to scan someone, you should use some API tools for using it. I think your developers do it, but you pay for different builders and for example OpenAI to use their dotins to recognize.

[01:35:09 - 01:35:56]
In product that I want to show you, you solve both of your problems for development team, for the AI inside the applications and also here in our product you can deploy it to servers and you don't need to host it. Where did you host your applications? I hosted it to Reddit and I bought a domain on Squarespace. And you built it through which? Roughly. Roughly. And are you satisfied as a result?

[01:35:58 - 01:36:45]
As a result, it's okay. I haven't been able to eventually launch it yet because I think there's a lot of functionality missing that I need to add on that is taking me some time to figure out how to add on. Let me show you something. Maybe it will help you buy our product. Our product is called Boogie. Boogie is the ideal team. Here is a very easy and

understandable interface. Here you have just part for briefing, you can do it by your voice or you can write some words

[01:36:45 - 01:37:34]
and here in the right part you see preview of your applications. Here we have some examples, just your brief build application that you recognize and our agents do all the part inside and also our agents work like a development team because over the years before the result was one agent that do it during the months because he goes step by step. In our case we have parallel agents that work like a real team and they build their products like first of all they write technical specification of documentation

[01:37:34 - 01:38:24]
like a real team but you just brief them, everything happens inside Okay, how will I know they're doing that? Because I thought that's what Replit was doing also but then functionally it's not working the way I want it to work but I don't understand the technical documentation yes but you don't need to understand but if you're trying to do for if you came with car to dealer you don't need to understand how they work inside how can you do the same you just give us an idea and all agents do like real development team you when you came to support development team you don't need to know how they work inside but when they go through the process

[01:38:24 - 01:39:17]
as a result you can see the preview of your application and you can choose any photo like So if you say for example let's make a photo of some person and after it it shows you the age and some things that I try to make more functionality than just a pot of water. Here is the story of Hanyu. Also here in our application you can deploy it on infrastructure. You can use your domain and you can preview this application and send this application to your friends, family and make some jokes.

[01:39:17 - 01:39:59]
But you don't need to know nothing about deploying, building etc. but if you want to change something, you can change it or you can even change button color it's a few clicks, you just click color, change it, for example let's make it build and it's just working, you don't need to know how it works inside Technically it's built through the... Near the one power, it's not fast. Maybe you can try our

01:40:00 - 01:50:00

[01:40:00 - 01:40:47]
application for the same application. You can compare. Do you have a free trial? Because I can build the same thing and compare them and see what's different. Yes, we have a free trial and we have PromoLink to have full functionality. and it will give you also for one month possibility to use different AI models and don't buy tokens for your application. What should I do to give you the possibility to try it tomorrow? Can you email link and some instructions?

[01:40:48 - 01:41:34]
Sure, yeah. Send that over. Let's make a video call for the next week and see the results. I'll probably need two weeks because realistically I'm not going to get started with it this week and I'll do it next week so maybe at the end of two weeks. Okay, thank you very much. Alright, thanks, great. Alright, we'll be well, we'll be better. I like your activity. You listen and then you're looking at your name and you're just listening. I think that's very underrated. There's a balance to be hit when you're controlling the composition and when you listen. I would like to listen to it. And I think also you're trying to understand the problem, right? How you feel when you go first back and things like that.

[01:41:35 - 01:42:27]
I would not, I don't know if I would not go into the technical interface, because that's where a lot of technical questions will come in. And it's like a lot of technical stuff that we should have to go in. So I'll probably demonstrate that, like, okay, you told me this, you have already done this, what are your problems? I was trying to show you exactly what's the difference and how fast it is. What else? I was thinking maybe because I felt like there was a potential disconnect with the ICD, like and you were very technical, which I think for the right person could be amazing, but if it's not the right ICP, it could be more on the other side.

[01:42:29 - 01:43:15]
I think I personally just feel like it's not the right person that you're talking to. That's just my opinion. I still think you are more advanced, your ICP is like more advanced person, not just like the person who is starting out with directly below,

because they can get almost whatever at this stage very very good. That's my mind opinion. Maybe from that, I just felt like from what Brianna was in her mind, her ICP, she felt like this is too overwhelming for her. That's my life. I think I didn't think you talked most about like my pain points and what I couldn't do right like if I tried

[01:43:15 - 01:44:09]
roughly and I tried to build something what like functionally didn't work for me that I was trying to do not just like oh you can build an app and we do all the technical documentation all the things because I don't I don't care about I care about like how it works and what's like functionally different and so I think if you like ask, you asked some questions at the beginning but it felt more like leading questions like you wanted me to say certain things. Yeah, you should know, I had this question but I should prepare better and better and for... Less like leading towards the answer you want and more to like prove yourself wrong or like get me to give you the answer, right? I feel like you did not find out what problems I have with what I tried before. you went right into here's all of the things you can get that's different but I don't care as a non-technical person I don't care about the technical differences in them

[01:44:09 - 01:44:55]
I care about what the algorithm is right and so if you had said something like if you had asked about like what didn't work well in the app that you built in Revlet like what were you not able to do? Time and cost because you spend one month and it's time if even you pay for a subscription but you pay from your time. Yeah, more than a subscription. And if you will be ready for a smaller time, you have more time to go to market to test your input, etc. And also, what was the reason for you to go to market and start for example,

[01:44:55 - 01:45:40]
a test is for adults? Yeah, because now I'm just going to try it and see, but you don't know what I'm comparing to or what I couldn't do that I can now do in Boogie, right? Yeah, and you know, you had a task, did you build it and you send it for your friends? And like what didn't work and like what did you have trouble with? Like why would you want to try some of those, right? I think like identifying those, because you wanted to just get to this to show me how cool it was and tell me all the technical things, right? But I just want to solve a problem that I couldn't do something in something else and you latch on to that and then show me how you can do better, right? It was very generic about the product, it felt like we don't understand what is her problem

[01:45:40 - 01:46:29]
and what she's doing, we knew that she was building something. Ok, for next time. Good job, Yuray! Show us the magic! yeah so as an ICP you are in HRKFC the HRKFC? of the HRKFC the big points that you have as an ICP is that you want continuous recruitment you want fast hiring you know you are second to bigger drugs like McDonalds so you want priority over the guys that are by the normal market and you have sent the discovery call that they don't have the applications

[01:46:29 - 01:47:18]
we cannot get them to come into a hiring, they don't have communication success so that's important, and you have like 5 stores in the company and how many jobs do I have, how many people do I hire? 5 jobs that are always up life and they are continuous bringing in people How many people do I hire? As many as you can. You have an alternative 50%. Okay, okay. One hour out of the week, so you have to go. Okay, okay. Okay, great. Let's say hello, how are you? I'm lovely, how are you? Perfect. So my name is Nikos, I'm the co-founder of the platform. I would like to personally jump into this call to meet you. I mean, we think that you guys are awesome.

[01:47:18 - 01:48:08]
Also, we love what you do and I have to admit that part of our theme is having their lunch break over at one of your branches. So nice. Perfect. So we would love to show you how we would help you with your recruitment success journey. Yeah, I'm excited to see the project. I would like to say first of all that we heard you loud and clear through this COVID-19 through every festival with Marianne. We understood that the speed of receiving applications is very important. we understood that having a priority on the best-fitting profiles is urgent

[01:48:08 - 01:48:21]
and having a communication success getting in touch with those people and proceeding fast to a higher level. Perfect. So let me show you how would you be a part of it.

[01:48:35 - 01:49:22]
No problem. No problem. So you're in the platform and you want to hire a staff, someone who can create trust in a specific brand. specific branch let me guide you how you can do it. So we hit Cephs and here you you can see all the

other types of people that you can hire. It's like click and go. We very quickly say that we want a Ceph, we want him to have one year of experience.

[01:49:22 - 01:50:00]
we say that this guy is in Thessaloniki here we give a lot of attention to fitting profiles so we want to provide you with a person that knows how to do the job we don't want to bring you just any profile and have to screen him so you have to select some skills So you can select some experience skills, then some technical skills. Of course, it's a little skill that you can go later through, and then some soft

01:50:00 - 02:00:00

[01:50:00 - 01:50:49]
skills. So after you do this, very quickly say what language is this person you would like to talk, what is the employment type and what is the salary you would like to offer. We also have a tool there to help you understand the cost of the employer in case you want to play around with some numbers and see the different costs and finally is the benefits that you know you would like to offer to the person our system provides an automated job art of course you you get based your loan if you already have of HALO trading and then after you submit it to the system

[01:51:03 - 01:51:59]
immediately you can see people so this is how we can very fast show you fitting profiles and you or any member of your team who has access to the account can very easily outreach with those people. We guarantee you that on every location of this branch you will have more than 5 000 active and fully available people to reach out to them. On this point we think that it's very important to distinguish between the effort that the organization has to put there and we understand there is a cost of a site done to go on and reach out manually to those people. So what we have prepared for you is a custom solution of an AI help, assisting the WD and outreach daily and massively the people that fit the most for each of your job posts.

[01:51:59 - 01:52:54]
we can guarantee you through metrics we have already reported that your applications will release by 46% through this system so regardless if you or your team are reaching out or not we will bring you 46% more of applications so after the drop post happens and I have to reach out to all the candidates like you match me and I reach out to all of them? You can do it or our system can do it for you. And in this way we will bring you 46% more than any other competing job host in our system. So later on after you have... How quickly do people respond? Perfect. So we have a room that in order to go to communicate with someone we suggest you to get in touch with him

[01:52:54 - 01:53:41]
over a window of 72 hours. We understand this is a lot for you. We understand that we want someone who would like quickly to move on to a screening. So this is why our system, the one that takes an out and outlaces, auto-responses and auto-starts the communication with each person. We know that the market has a very high turnover after the application is made but through this instant detect outputs and auto response we can guarantee 70% of communication success. Oh you guarantee? What's the guarantee? That's a refinement. What happens if it doesn't happen? I mean we have seen our... Do I get a reset? No but we can see the metrics.

[01:53:43 - 01:54:30]
We have seen the metrics that it goes to 70% of communication success. which is very important for the management of the market. I would like to show you that through the platform we have developed a custom view which you can very easily see the people, see where they are, how much they are, what is their experience in years, their age and you can have very easily access to their... So these are people that have applied to my job? Exactly. And then you can have some quick actions, you can call them easily, text them, and you can categorize them.

[01:54:30 - 01:55:17]
So you know how you can organize the database of applications. We also would like to help you in the post connection and this is how we can help with the success of the communication and offer you a tool that you can organize an interview through the conference so we can participate and help you through sending reminders to the people. You can sync the interview schedule with your calendar or with your team's calendar so you know when is an upcoming interview and we will send you also new notifications about when the interview will take place. The person needs to accept so you know if the interview is scheduled or not.

[01:55:18 - 01:55:22]
And you can select the times that you would like.

[01:55:31 - 01:56:25]
Finally, I would like to show you that we have a tab for you where you can see an overview of all of your jobs and you can have a quick outlook of how many of you saw the success of this job post, how many people applied, what are the new messages that you have there and you can very easily create a new job in JobOS and start receiving applications. Deliberate any questions on the process. I don't think I have any questions. Okay, so look, we really like to collaborate with you guys and we thought of making a customer. So we would like to give you a one month of trial with a bi-weekly meeting from our team to help you navigate through the platform.

[01:56:25 - 01:57:11]
And then if you guys like it, if you see a good fit, we would like to make you an offer, a one-to-month offer, on which this first month will be an already paid part of. Ah, so it's not a free trial? No. We would like to make an offer for a month. Okay. Is this false? Yes. Okay, let's close that. Okay, what do we all get back? Where's your POS machine to get? When you're going through the product, you can say every single time, like, when you say 70%, right, you can say, do you think it's a lot?

[01:57:11 - 01:58:03]
and then she will start to admit yes it's a love right if you show like one feature you say is this something that will solve your problem and she will say yes you need to get all those yes then before you make an offer like even before you ask the questions you can ask her is this something that will solve your problem she gives you yes then you make an offer. Yeah I have that a few written down because I love your energy as always in the beginning you were talking so much love that I was thinking you were her husband. I think the biggest thing for me was when you were showing her the demo, you were talking like all the time and she was like just like looking, watching everything else, maybe trying to like try to engage her in some type of way so she doesn't just like sit down and just like watching the whole time.

[01:58:05 - 01:58:51]
The question was really open ended. She obviously showed me that it was so not specific. That's for her. She said, okay, I don't have any questions. So maybe like more specific questions at the end. So she knows like guys are enjoying more. And the trial was maybe like for this, that I see if you did trial, it's like an end. I don't know. So there was no option. I'm going to be a second day for the goal. Yeah. Great. At the beginning, you were like, here are the three things you talked about that you cared about. And then you didn't connect those three things to the demo that you showed me, right? You were like speed, quality of applicants. I would have the third one. Communication. Communication. OK. So then you did a little bit at the end where you're like,

[01:58:51 - 01:59:36]
here's how we help increase communication. That was the only part, right? I would have liked for you instead. I didn't like at the beginning that you were like, let's go through this job post. Because I was like, OK, each one, you're like setting up the job post and I was like what am I going to see something this is just like set up and not interesting but I cared about speed so I would like you to have job posts and be like as soon as you publish you can immediately start reaching out to all these applicants you cared about speed within 10 seconds you have a list of 5,000 applicants that you can reach out to immediately that match your criteria right and you're like is that like faster than other places that you use like how quickly do you get qualified applicants like this usually right because then you're interacting with me and not just showing me the next thing. And then the next one was the quality of candidates, right? And you did show me the quality, but I had to infer that the quality

[01:59:36 - 02:00:00]
was good, right? Then you could go, here's how you set up the job post and you define the criteria and the quality of the things that you want, right? And so here's one that we did. I set it up for you, right? Here's like the quality of applicants that have applied, but they meet all this criteria and they meet at least 70% of criteria, right? There's so many people in your area, like the quality is very very high right how does that compare to other candidates that you've seen right because then you're asking me to like

02:00:00 - 02:10:00

[02:00:00 - 02:00:49]
agree, to say like, yes, that's interesting. No, that's different. No, I don't care about that as much. And then the communication, right? You're like, you also care about communication. Let me show you what that looks like. Here's how we set it up so you're able to like get that feedback. On average, our customers get 70% not guaranteed. On average, our customers get 70% of people that respond to them, which is like one of the highest in the industry, right? Based on what we know based on our competitors. But I would show it like that because you're trying, you did a good job at the beginning being like here's the three things you care about but then you didn't connect it to like how you actually show it yeah yeah for me i think um we had seven companies um you and bima when you started it's like very white joke whatever just to get their cards down i think that's one of the tactics that is optional for you guys like you're trying to

[02:00:49 - 02:01:38]
an interpersonal relationship and sometimes jokes whatever like it works at least as far as anything goes so that's one option the other thing is that your product is pretty straightforward like if we are not let's say vienna's mcdonald when you go through the demo you can already put the mcdonald's information in there right now it felt like it felt like you came up with some that much information and then you go through the demo, but why not just get information from brands that they put it there because then they feel that you are setting it up already, you know? So this is like the yeses that Justin was talking about, like you already set it up with them and they are going through the experience with you, so we want to do that. And also they probably are hosting another job board, right?

[02:01:38 - 02:02:30]
they might have a question what's the difference between that and you in this demo you might probably want to figure out like telling them what's the difference already and how much like they're spending in the job board how fast they're getting the you know the applications and things like that and use your tools of different shape against them so that's that i'll probably do it early i'll try to figure out like how much you're spending what's the restrictions there these are and I think already know the final conversation is that we don't know what's you want a swiper card or like like what like you want to receive a credit card or like you want to schedule the next one and you're not clear about offer so yeah I also understood that the way you said I understood there's a free trial I think I think using the word is a number and also like

[02:02:30 - 02:03:15]
trial right like you could say pilot you could say like but I want you to frame it like less like oh my god you're so amazing and we want to work with you review all the things more like we're super excited to work with you here's what we'd like to do here's what we do for companies like you right we set it up like this we work together for a month everything set up here like we ran success metrics and if it works we like continue not even say month to I think you could push for longer for larger companies. You could be like a six month engagement, an annual agreement after that. Like don't go to the lowest, because then you don't give yourself any room to negotiate anything. So we have seen that they ask for a month to try out the system before they want to commit for longer.

[02:03:16 - 02:04:01]
It's not a budget question for them because they have the money. No, but you can give them a month. At Baylor, we usually work together for a month for a pilot. And then people like you likely agree on an annual engagement after that. Generally they are very open to just start from them. I think we could very easily say, you know what, we're going to post this job on today. Let's post this job on today. You'll start receiving an application. And then you see you have applications and you can buy it. They'll send you an offer and in the next few days you can see how many are flowing in. And then you can decide whether you want to buy it or not. based on it. That's important because your platform has some of the clients that you can give urgency to it. So your platform already stopped that urgency which is what I talked about like

[02:04:01 - 02:04:47]
the more extreme seem to set up for them and then by the time you finish the demo some things are in there and that will be if you want to follow later on that will be one of the excuses or one of the things to tell them hey remember we set up yesterday right now you have 10 applicants already So, do you want to look at applicants? Yeah, okay, let's proceed. And I think that, again, this is optional, because there's no Bible, there's no gospel truth, but sometimes how you position child pilot is that you can say, I'm going to give you a trial of your pilot for 30 days, that will be something

that they could make small steps and then the year we plan. But sometimes you can flip it around and say, hey, you can commit this six month plan plus one month pilot and then it can cancel the pilot. It's one of the options as well.

[02:04:48 - 02:05:33]
Right? It's the same thing, but the latter has a commitment intact. I'd say always do a pilot. Try to always put it for the longest and then you can negotiate shorter. Right? Yeah. Because then it gives you more space and more room to do things. Okay, perfect. Great. Thank you. Okay, now everyone's gone. This is a little wrap-up. What did we think from today, right? Was it helpful to see other people, to see how other people navigate things? What do you think as a group we can work on? We can continue to work on. What did you learn from what people did? Maybe first thing just to try because all of us have stress here so stress doesn't have a place. We practice it so... But better practice in front of people that are not actually working.

[02:05:33 - 02:06:21]
Okay, yeah, yeah. I'll help people. What else? What do you think, like, we should work on for demos? What do you think we need to work on as a group? I think we should get more demos. We should get more demos. We need to do more, way more comfortable. I need to practice. I need to work on getting those yeses, more yeses, working on that psychology. We are building something for them and not just trying to sell our stuff and we can work on that together. For me the big takeaway for everyone and this is something that will continue for you to improve as you will,

[02:06:21 - 02:07:09]
but I have not heard a single product that is explained in a good way. I feel like you are still crafting as to know what you are going to say about the product. So it doesn't feel like you know what you are doing. It should be very solid and then also overcoming objections. I didn't hear anyone overcoming objections. That's why we do this customer research to understand what are the objections and we overcome them before even when you ask is there any problem you already overcome all those problems this conversation to me there's one thing um i think a lot of companies obviously you have product first there's one technique that has this technique that someone uses before they

[02:07:09 - 02:08:00]
create a product they actually write down the sales copy or the sales page first because when you do that it's almost like the demo that you're doing like when you do the demo you don't you don't technically you have some product but you're actually trying to explain your relevant opposition to people first and then objections and etc you take that information and you find your product right it's all about reps it's how many reps you do and the more reps that you do better you get right so for example i think that you probably have to do your sales team But the question is that how often do you go to a best self-person? I know, so it's like, yeah, just telling them what to say. Yeah, so that they don't leave. Yeah, but how do you position out, I would ask a peers or mentors and regularly just sit down with them and say,

[02:08:00 - 02:08:45]
I will take them in 30 minutes. And that gives you clarity of how you would find your profit on. So it's a flip process to try to sell first, right? and try to figure out the options and use the conditions to inform the product. So I would rather have more reps in the sales and business process than to only focus on the product. Because right now, a lot of people just focus on the product. The sales cars, sales people are the best. Think about how they sell the car. Like you go there and they know everything about the car before you ask a question. and they compare to everyone else and they will tell you how much speech you will get or how you will feel like they also play on your emotions right like think about how they sell you the car

[02:08:46 - 02:09:31]
and everybody's driving like a nice one's left with them does this make sense like when you go there like they tell you everything about the car they get you so excited and then they will take you for that best drive It's like what you're doing, right? You try to sell the B2B audio, right? You right now have the ones that should probably have an idea. Like, what's the downside, what's the downside? And we're going to have campaigns to sell something. We'll do it out there and see how it goes. I would feel a lot about that position, like, really good for us. Also, thank you guys for preparing and doing a good job today. I know it's hard to go up in front of everyone and to practice going through and having it be like some of your first, like, like interactions with someone who's going to challenge you more. And I did challenge most of you when you were up there.

[02:09:32 - 02:09:59]
So thank you for working on navigating it and keep practicing. You can only go up from here, right? You can only get better and do more. And I think that I'm very excited for where you're at, the conversation that you had, what you're going to do next. And so keep practicing. I'm happy to do practice more. I'm happy to practice, right? Office hours also and be customers as well. If you have tricky situations or you're like, I ask them this random question, how should I bring it differently? Like, bring those and we can talk about them, because you're going to

02:10:00 - 02:10:38

[02:10:00 - 02:10:36]
run into challenging situations and just understanding how to navigate and how to push back on people I think is going to be very important not just for your customers but also for investors and other people yes yes okay but great job you guys did excellent today thank you guys now it's time to take a break for an hour and we will be continuing the closeout session for the phase one plus we will be working for marathon as well. I will explain later everything every detail.
