MediMind

A PARTNERSHIP FOR YOUR HOSPITAL

More time for care. More control of your hospital.

MediMind brings clinical care and hospital operations into one operating system, tailored to your team.

Free to evaluate. Built around your hospital.

THE PARTNER OFFER

Our next 5 hospital partners

5

We are allocating our implementation and development capacity to five hospitals.

Your current software budget.
A whole hospital operating system.

01 **Free implementation**

Migration, setup and staff training.

02 **Free tailored development**

Ongoing development of the agreed base system, tailored to your hospital.

03 **Free parallel evaluation**

Keep your current system. Compare before deciding.

04 **You own the first version**

Ownership of the delivered base code, set out in your contract.

Price matching covers the agreed base system. Future AI services are optional and priced separately.

THE COST OF DISCONNECTED SOFTWARE

When systems are separate, your team does the connecting.

The same patient. Repeated typing. Missing information. Time spent chasing an answer.

Today, between systems	With one shared system
Patient details entered again	**One record, available to every authorised role**
Results chased by phone	**Results available in the patient's chart**
Services checked against the bill by hand	**Clinical work connected to billing**
Management waits for separate reports	**One view of activity, workload and revenue**

WHAT CHANGES FOR YOUR HOSPITAL

A clearer operation. A stronger business.

01 Protect revenue

Capture services and supplies. Reduce omissions and claims rework.

02 Reduce administrative work

Less retyping and chasing. More capacity in the team you already have.

03 See the whole picture

Admissions, beds, workload and revenue in one place.

04 Catch preventable errors

Shared information and built-in checks help staff spot issues sooner.

We agree the targets together, then measure the change in your hospital.

ONE PATIENT JOURNEY

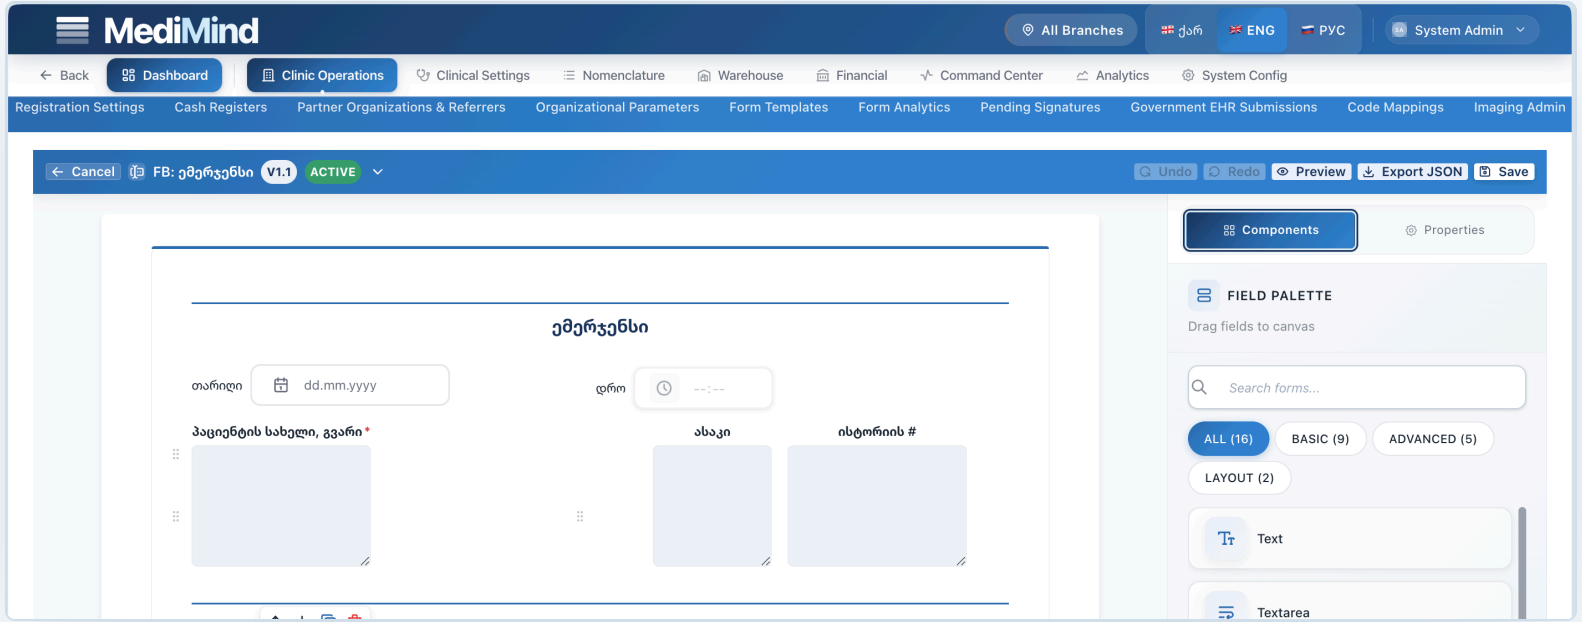

From registration to billing.
In one system.

01 **Register once**

02 **Document care and place orders**

03 **Read results in the same chart**

04 **Carry the work through to billing**

MediMind / configurable clinical forms

Laboratory, imaging, pharmacy, nursing, stock and finance share the same foundation.

A CLOSER LOOK AT THE LABORATORY

The order, the sample, the result. One continuous process.

01

The order reaches the laboratory

02

The team follows its progress

03

The verified result returns to the chart

A shared process for the doctor, the laboratory and the patient chart

- Laboratory and imaging are already operating at the GeoHospitals central hospital.

EXPERIENCE IN GEORGIA

Already working inside a real hospital.

GeoHospitals

The central hospital is live. The network rollout is proceeding in stages.

We can arrange a reference conversation with the hospital team.

25

hospitals covered by one signed agreement

1.15M

patient records migrated

Migration completed in July 2026: 1,147,535 records.

THE PEOPLE BEHIND MEDIMIND

Clinical experience.
A team that can deliver.

Dr. Lasha Khoshtaria

Co-founder / Interventional cardiologist

Building around the work he knows from clinical practice.

Irakli Pkhovelishvili

Co-founder / CEO

Duke MBA. Nine years at Riot Games, bringing experience in scaling technology.

₾150,000

GITA grant funding received

500

GLOBAL

500 Global Eurasia accelerator

For you: a team for implementation, training and development around your needs.

THE DIRECTION WE ARE BUILDING TOWARDS

One foundation.
Three stages of progress.

01

The offer today

One hospital operating system

Clinical and administrative work on one foundation, adapted to your hospital.

02

Optional next stage

AI for each department

Assistants for documentation, clinical checks and administrative tasks. Each service agreed separately.

03

Our long-term vision

The hospital's AI Brain

A shared understanding of the hospital that identifies risks and prepares coordinated next steps.

The base system is the starting point. AI services have separate scope, validation and pricing.

AI BRAIN / OUR LONG-TERM VISION

A hospital that sees what needs attention.

A critical result. A delayed task. A missing document. The ambition is to connect the signal with the right person and the next action.

01 See the whole context

02 Flag what needs attention

03 Prepare the next step

AI flags and assists. Your clinicians decide.

Future capability. Not included in the base offer.

YOUR EVALUATION

The evidence comes from your own numbers.

We agree a baseline and success criteria before the evaluation starts.

What we measure	What it tells you
Repeated entries per patient	How much duplicate work disappears
Administrative hours per 100 admissions	How much capacity the team gains
Time from discharge to a complete claim	How quickly work is ready for reimbursement
Unbilled services and returned claims	Where revenue is lost or delayed

Your current process is the baseline. Your team tests the new one. You decide whether the improvement is enough.

A CONTROLLED TRANSITION

Your hospital keeps working.
You decide when to switch.

01 Agree the scope

Choose the first process, the team and the success criteria.

02 Prepare together

Map data, configure the system and train the team.

03 Run in parallel

Compare real work while your current system stays in use.

04 Make the decision

Move forward only when your team accepts the result.

The evaluation is free, with no obligation to buy. The rollout schedule is agreed around your hospital's readiness.

OWNERSHIP AND CONTINUITY

Your data.
Your first version.

01

Your hospital owns its data

An open FHIR R4 format keeps it portable.

02

The first delivered version belongs to you

We transfer ownership of the agreed base-system source code under your contract.

03

Clear terms before you commit

We document the scope, price, support and ownership rights together.

Third-party components retain their licences. Rights to later versions and optional AI services are defined separately.

THE NEXT STEP

Let's start with one process in your hospital.

25 minutes

We map the process, show the relevant system and agree what a useful evaluation would measure.

With your director and the person who runs that process. At your hospital or online.

Send us two times that work for you

Dr. Lasha Khoshtaria

DETAILS / COMMERCIAL SCOPE

What your partnership includes.

The base offer

- Setup, data migration and team training
- Development for the agreed base scope
- Free parallel evaluation
- Ownership of the first delivered base version

Agreed separately

- Optional AI services and the future AI Brain
- Hardware and third-party service costs
- Support levels, price-lock term and rollout schedule

Price matched to your current software spend for the agreed base scope. Paid service starts after acceptance and your decision to proceed.

DETAILS / FOR YOUR IT TEAM

Built ground-up on FHIR R4.

Clinical data uses an open healthcare standard at its core. Departments work on the same model.

One codebase

A shared foundation for the hospital's clinical and administrative work.

Portable data

FHIR R4 export, with migration and reconciliation agreed before rollout.

Traceable access

Roles, permissions and an audit trail of changes.

An agreed deployment model

Hospital hosting, cloud or hybrid, with continuity and recovery planned together.

Your IT team joins the technical review before any transition.
